Simple. Scalable. Secure.

# Intelli-M Access® Software

Intelli-M Access® is a browser-based access control management application, delivering cutting-edge features to easily manage single-door to enterprise-wide access control installations. Intelli-M Access® delivers the ultimate in simplicity, scalability, and security:

▶ Intelli-M Access uses a highly scalable architecture to deliver access control for installations of any size. From simple single-door implementations, to complex installations with hundreds of doors and thousands of cardholders in a single facility or with multiple locations across town or the world, Intelli-M Access has a solution.

▶ Intelli-M Access is available via any standard web browser – and eliminates the need to install and maintain a client software application. Manage Intelli-M Access from anywhere you can run a standard Internet browser that supports JavaScript. Intelli-M can also be accessed via most smart phones and tablets, including iPad, iPhone, and Android.

▶ View events and alarms, generate reports, and monitor the status of devices using the simple yet powerful user interface.

▶ Configuring doors is a snap. Intelli-M provides pre-installed templates and wiring diagrams to simplify the process, helping to get an installation up and running in minutes.

▶ The People tab makes finding users simple – regardless of the size of your system. Intelli-M features visual formatting and selectable inputs that allow you to search based on single or multiple data fields, across single or multiple locations, instantaneously.

▶ Print badges for a single individual from the people page, or in bulk from the reports page.

▶ Design badges and customized reports using Microsoft's Report Builder, a free design tool.

▶ Use convient features such as "Lock All Doors" and "Momentary Unlock" to safely and easily manage a site. Intelli-M Access enables you to perform these and many other functions from any device equipped with a JavaScript enabled browser—including tablets and smartphones.

▶ Create Schedules and Holiday Sets quickly and easily with an intuitive click-and-drag interface. Simply associate events with devices and your system knows exactly when to unlock a door – and when the entrance should remain secure.

▶ Multiple security roles allow you to provide system access to as many users as you'd like, while controlling specific permissions at the individual or group level.

▶ Live Muster displays the image of cardholders in zones configured for Muster monitoring.

▶ Build and customize features your way using the highly extensible Rules Engine. This powerful system component provides the ability to use basic capabilities such as "Lock Zone" or "Record Video" to build highly tailored access control features.

▶ Program events to trigger internal actions such as "Lock Zone" or send e-mail, or to communicate with external systems - such as initiating recording on a remote DVR.

▶ Leverage Intelli-M Access' open API to integrate your access control solution with additional external devices, sources of data, and system applications. The possibilities are virtually endless.

▶ infinias solutions also support Video Integration with industry leading video surveillance platforms, providing a robust and complete physical security solution. Visit our website or contact us for a complete list of our integration partners.

## INSTALLING INTELLI-M ACCESS

Intelli-M Access® is available as a software only solution, or pre-installed and pre-configured on infinias' purpose-built servers.
