Voice Processing System

Installation Manual

KX-TVA50

Model KX-TVA200

Thank you for purchasing a Panasonic Voice Processing System.
Please read this manual carefully before using this product and save this manual for future use.

KX-TVA50/KX-TVA200: Version 1.0

System Components

The Voice Processing System (VPS) consists of the following system components when fully-equipped with all available optional cards.

KX-TVA50

	Model	Description
Main Unit	KX-TVA50	Voice Processing System
Optional Cards	KX-TVA502	2-Port Hybrid Expansion Card
	KX-TVA503	2-Port Digital Expansion Card
	KX-TVA524	Memory Expansion Card
	KX-TVA594	LAN Interface Card
	KX-TVA296	Modem Card

KX-TVA200

	Model	Description
Main Unit	KX-TVA200	Voice Processing System
Optional Cards	KX-TVA204	4-Port Digital Expansion Card
	KX-TVA296	Modem Card

Important Safety Instructions

When using telephone equipment, basic safety precautions should always be followed to reduce the risk of fire, electric shock and injury to persons, including the following:

- Follow all product warnings, cautions, and instructions.
- Read all the information contained in this manual.
- Close and secure the front cover when the unit is in operation.
- This unit is equipped with a 3–wire grounding plug. The plug will only fit into an grounded power outlet. Do not modify this plug in any way. If it cannot be inserted into the outlet, have the outlet replaced by a licensed electrician.
- This unit is designed to operate at one specific voltage and current setting. The proper voltage and current required for this unit are listed on the product label.
- Do not overload wall outlets. Overloaded outlets could result in fire and/or electrical shock.
- Use only the AC cord included with the unit when connecting the AC adaptor to the power outlet.
- Install the unit so that the AC cord is not obstructed in any way. Do not connect the unit to an extension cord.
- Before touching any internal components, turn off the unit, disconnect the AC adaptor, and wait at least 20 seconds.
- Unplug the AC adaptor before cleaning the unit.
- Do not use solvents, liquid cleaners, water, or abrasive powders to clean the unit. Use only a damp soft cloth for cleaning.
- Do not expose the unit to dust, moisture, condensation, high temperatures (more than 40 °C [104 °F]), vibration, and direct sunlight.
- Mount the unit on a stable wall surface. Do not mount the unit inside of a separate enclosure unless it is properly ventilated.
- Mount the unit on a surface that is flat and free of obstructions, so that the openings on the back of the unit will not be blocked.
- Do not block the vent slots and openings located on all sides of the unit. Allow at least 20 cm (8 in) of space above and 10 cm (4 in) on the sides of the unit.
- Do not install the unit near water or moisture, heating appliances, or electrical noise generating devices such as televisions, monitors, fluorescent lamps, or electric motors.
- Handle the unit carefully. Do not drop or otherwise expose the unit to physical shock.
- Do not insert wires, pins, or any other material into the unit's vent slots or access points. This could result in electrical shock and serious unit malfunction.
- If the unit malfunctions, disconnect the unit from the telephone line and check the line by reconnecting the telephone. If the telephone operates properly, have the unit repaired by a Panasonic Factory Service Technician.
- Do not disassemble this product. Dangerous electrical shock could result. The unit must only be disassembled and repaired by a Panasonic Factory Service Technician.
- Unplug and transport the unit to a service technician if the AC adaptor or AC cord is frayed or damaged, if the cabinet is cracked or broken, or if the unit has been exposed to moisture, has been dropped, or is not otherwise operating properly.
- Do not use the telephone during a lightning storm or to report a gas leak in the vicinity of the leak.
- The lines connecting the PBX and VPS must never run outside of the building.
- This product is only for connection behind a suitable PBX and should not be connected directly to the network.

WARNING

- **UNPLUG THIS UNIT FROM POWER OUTLETS IF IT EMITS SMOKE, AN ABNORMAL SMELL OR MAKES UNUSUAL NOISE. THESE CONDITIONS CAN CAUSE FIRE OR ELECTRIC SHOCK. CONFIRM THAT SMOKE HAS STOPPED AND CONTACT AN AUTHORIZED SERVICE CENTER.**
- **THIS UNIT MAY ONLY BE INSTALLED AND SERVICED BY QUALIFIED SERVICE PERSONNEL.**
- **WHEN A FAILURE OCCURS WHICH EXPOSES ANY INTERNAL PARTS, DISCONNECT THE POWER SUPPLY CORD IMMEDIATELY AND RETURN THIS UNIT TO YOUR DEALER.**
- **DISCONNECT THE TELECOM CONNECTION BEFORE DISCONNECTING THE POWER CONNECTION PRIOR TO RELOCATING THE EQUIPMENT, AND RECONNECT THE POWER FIRST.**
- **TO PREVENT FIRE OR ELECTRICAL SHOCK, DO NOT EXPOSE THIS UNIT TO RAIN OR MOISTURE.**
- **THIS UNIT IS EQUIPPED WITH AN GROUNDING CONTACT PLUG. FOR SAFETY REASONS, THIS PLUG MUST ONLY BE CONNECTED TO AN GROUNDING CONTACT SOCKET WHICH HAS BEEN INSTALLED ACCORDING TO REGULATIONS.**
- **THE POWER SUPPLY CORD IS USED AS THE MAIN DISCONNECT DEVICE. ENSURE THAT THE AC OUTLET IS LOCATED NEAR THE EQUIPMENT AND IS EASILY ACCESSIBLE.**

CAUTION

DANGER OF EXPLOSION EXISTS IF THE BATTERY IS INCORRECTLY REPLACED. REPLACE THE BATTERY WITH THE SAME OR EQUIVALENT TYPE RECOMMENDED BY THE BATTERY MANUFACTURER. DISPOSE OF USED BATTERIES ACCORDING TO THE MANUFACTURER'S INSTRUCTIONS.

SAVE THESE INSTRUCTIONS

Other Information

When you ship the product

Carefully pack and send it prepaid, adequately insured and preferably in the original carton. Attach a postage-paid letter, detailing the symptom, to the outside of the carton. **DO NOT** send the product to the Executive or Regional Sales offices. They are **NOT** equipped to make repairs.

Product service

Panasonic Factory Servicers for this product are listed in the servicer directory. Consult your certified Panasonic dealer for detailed instructions.

Installation note

This product is only for connection behind a suitable PBX and should not be connected directly to the network.

For Future Reference

Record the information in the space below for future reference.

Note

- The serial number of this product may be found on the label affixed to the side of the unit. You should note the serial number of this unit in the space provided and retain this manual as a permanent record of your purchase to aid in identification in the event of theft.

MODEL NO.	_____
SERIAL NO.	_____
DATE OF PURCHASE	_____
NAME OF DEALER	_____
DEALER'S ADDRESS	_____ _____ _____ _____
DEALER'S TEL. NO.	_____

F.C.C. REQUIREMENTS AND RELEVANT INFORMATION

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures.

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

CAUTION

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this device.

The following information applies to when an optional modem card is installed in this product.

Notify The Telephone Company

This equipment complies with Part 68 of the FCC rules and the requirements adopted by the ACTA. On the back of this equipment is a label that contains, among other information, a product identifier in the following format:

- US:AAAEQ##TXXXX

If requested, this number must be provided to the telephone company.

Installation must be performed by a qualified professional installer. If required, provide the telephone company with the following technical information:

- The telephone numbers to which the system will be connected
- Make: Panasonic
- Model: KX-TVA50/KX-TVA200
- Ringer Equivalence No. for KX-TVA50: 0.4B
Ringer Equivalence No. for KX-TVA200: 0.4B
- Facility Interface Code: 02LS2
- Service Order Code: 9.0F
- Required Network Interface Jack: RJ11C

Wiring

A plug and jack used to connect this equipment to the premises wiring and telephone network must comply with the applicable FCC Part 68 rules and requirements adopted by the ACTA. A modular plug is provided with this product. It is designed to be connected to a compatible modular jack that is also compliant. See installation instructions for details.

Ringer Equivalence No. (REN)

The REN is used to determine the number of devices that may be connected to a telephone line. Excessive RENs on a telephone line may result in the devices not ringing in response to an incoming call. In most but not all areas, the sum of RENs should not exceed five (5.0). To be certain of the number of devices that may be connected to a line, as determined by the total RENs, contact the local telephone company. For products approved after July 23, 2001, the REN for this product is part of the product identifier that has the following format:

- US:AAAEQ##TXXXX

The digits represented by ## are the REN without a decimal point (e.g., 03 is a REN of 0.3).

Telephone Service Problems

If this equipment causes harm to the telephone network, the telephone company will notify you in advance that temporary discontinuance of service may be required. But if advance notice isn't practical, the telephone company will notify the customer as soon as possible. Also, you will be advised of your right to file a complaint with the FCC if you believe it is necessary.

Changes in Telephone Company Communications Facilities, Equipment, Operations, and Procedures

The telephone company may make changes in its facilities, equipment, operations or procedures that could affect the operation of the equipment. If this happens the telephone company will provide advance notice in order for you to make necessary modifications to maintain uninterrupted service.

Trouble with this equipment

If trouble is experienced with this equipment, for repair or warranty information, please contact a Factory Servicenter or other Authorized Servicer. If the equipment is causing harm to the telephone network, the telephone company may request that you disconnect the equipment until the problem is resolved. Do not attempt to repair this equipment yourself.

Connection to the Party Line

Connection to party line service is subject to state tariffs. Contact the state public utility commission, public service commission or corporation commission for information.

Combined Use with Alarm Equipment

If your home has specially wired alarm equipment connected to the telephone line, ensure the installation of this equipment does not disable your alarm equipment. If you have questions about what will disable alarm equipment, consult your telephone company or a qualified installer.

Introduction

Thank you for purchasing the Panasonic Voice Processing System KX-TVA50/KX-TVA200. We are confident that this product will provide your customer or client with many years of dependable service. This Installation Manual is designed to serve as an overall technical reference for the KX-TVA50/KX-TVA200.

It provides instructions for installing the VPS hardware, configuring the connected PBX for use with the VPS, and getting started with the KX-TVA Maintenance Console software.

The Installation Manual is divided into the following sections:

Section 1 Voice Processing System Overview

This section provides a basic introduction to the VPS and its specifications. It briefly explains what the VPS can do, and how it is connected to and interacts with the PBX.

Section 2 Installation

This section explains how to install the VPS and its optional cards.

Section 3 Installing KX-TVA Maintenance Console

This section explains how to install KX-TVA Maintenance Console on a PC.

Section 4 PBX Programming for APT/DPT Integration

This section explains how to configure compatible Panasonic PBXs to use APT/DPT Integration with the VPS.

Section 5 PBX Programming for Inband Integration (KX-TVA50 only)

This section explains how to configure selected Panasonic PBXs to use Inband Integration with the VPS.

Section 6 Configuring the System

This section explains how to configure the VPS for basic operation.

Section 7 System Maintenance

This section describes how to perform common maintenance procedures.

Glossary

An alphabetical listing of features, terms, and abbreviations, as well as their definitions.

Index

An alphabetical listing of features and terms, as well as the page numbers of related sections.

About the Other Manuals

Along with this Installation Manual, the following manuals are available:

Feature Manual

The Voice Processing System Feature Manual is an overall reference describing VPS features. It explains what the VPS can do, and how to obtain the most of its many features. Sections from the Feature Manual are listed throughout this manual for your reference.

Programming Manual

The Voice Processing System Programming Manual is an overall reference for programming the VPS using KX-TVA Maintenance Console. It explains how to use KX-TVA Maintenance Console and obtain the most out of system administration. Sections from the Programming Manual are listed throughout this manual for your reference.

Subscriber's Manual

The Voice Processing System Subscriber's Manual describes how subscribers can access commonly used VPS features and functions with their extensions and mailboxes. Relevant sections from the Subscriber's Manual are listed throughout this manual for your reference.

Note

- For KX-TD500, KX-TDA series, and KX-TAW series PBXs, the term "trunk (CO line)" used in this manual indicates a trunk (CO line) group.

Section 1

Voice Processing System Overview

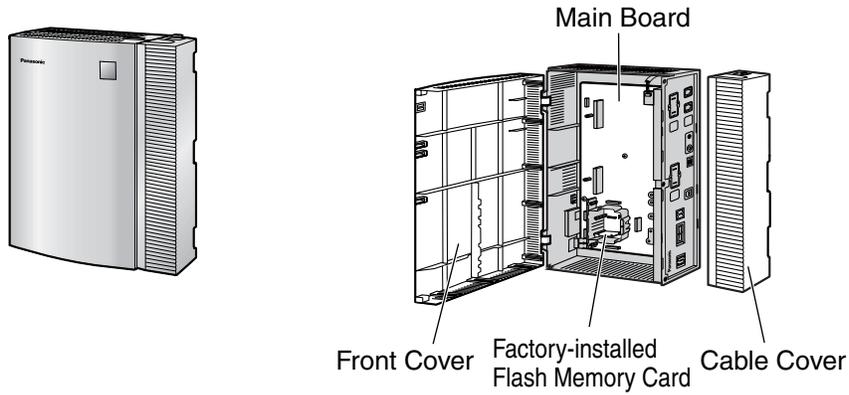

This section provides a basic introduction to the VPS and its specifications. It briefly explains what the VPS can do, and how it is connected to and interacts with the PBX.

1.1 Basic System Construction

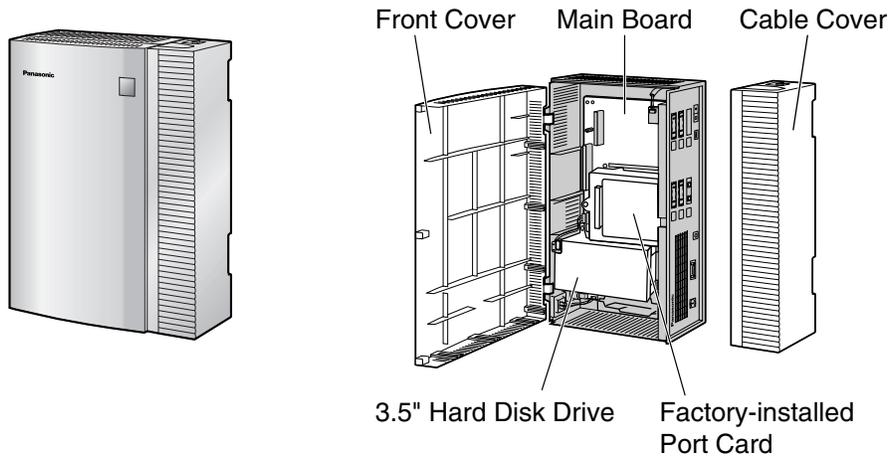

1.1.1 Main Unit

The KX-TVA50 is equipped with 2 jacks in its initial configuration, and its flash memory card provides 4 hours of recording capacity. The KX-TVA200 is equipped with 2 jacks in its initial configuration, and its hard disk drive provides 1000 hours of recording capacity.

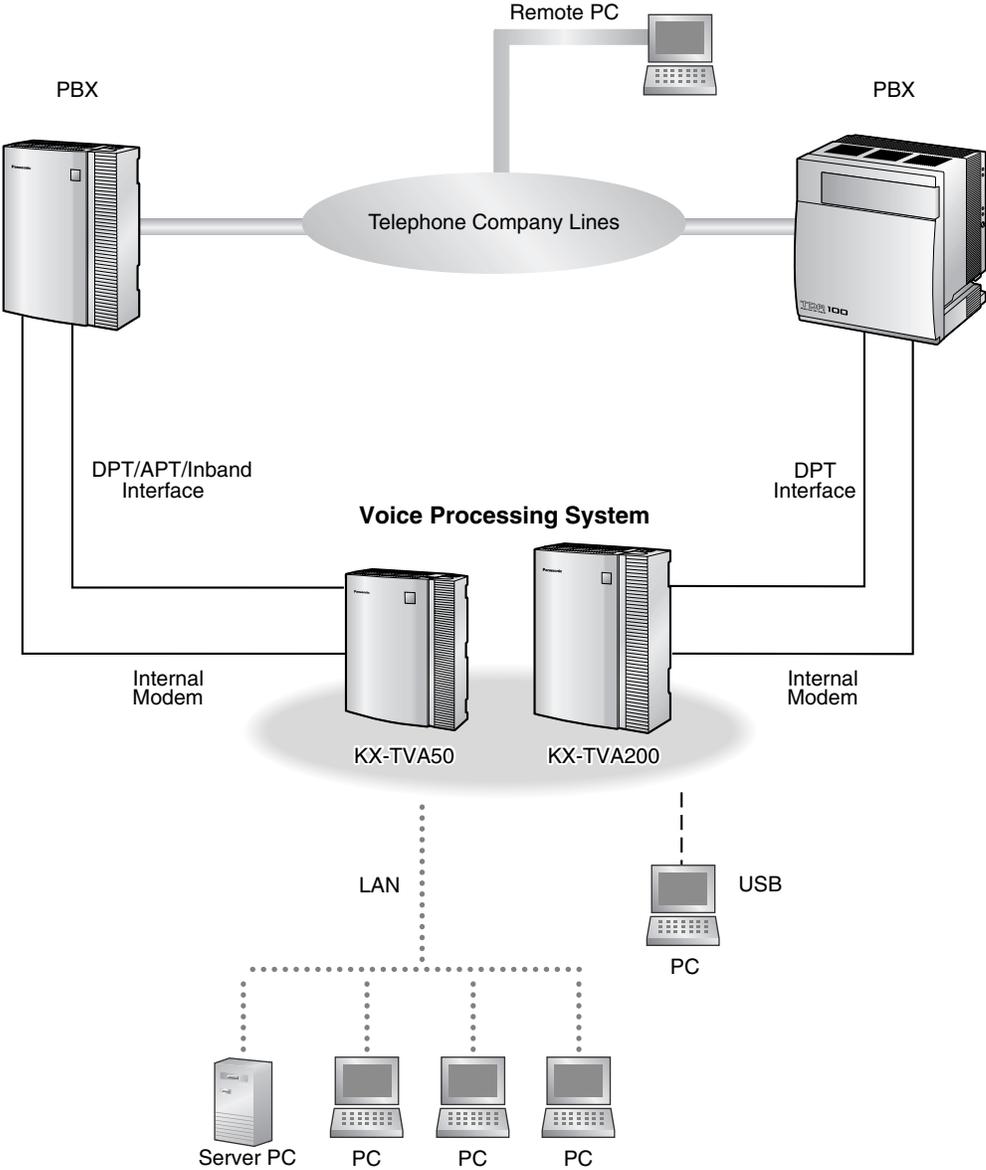

KX-TVA50

KX-TVA200

1.1.2 System Connection Diagram

1.1.3 Options

Optional Cards—KX-TVA50

Model	Model Name	Maximum Quantity
KX-TVA502	2-Port Hybrid Expansion Card	2
KX-TVA503	2-Port Digital Expansion Card	2
KX-TVA524	Memory Expansion Card	1
KX-TVA594	LAN Interface Card	1
KX-TVA296	Modem Card	1

Optional Cards—KX-TVA200

Model	Model Name	Maximum Quantity
KX-TVA204	4-Port Digital Expansion Card	6
KX-TVA296	Modem Card	1

1.1.4 Initial Configuration and Expansion Capabilities

Specification		KX-TVA50	KX-TVA200
No. of Ports	Initial Configuration	2	4
	Maximum	6	24
Recording Time	Initial Configuration	4 hours	1000 hours
	Maximum	8 hours	—

1.1.5 Installer Equipment and Software Requirements

The installer must use a PC and the KX-TVA Maintenance Console software to configure and customize the VPS. The PC can be connected via the built-in USB port of the VPS, or can access the VPS over a local network via the built-in LAN port (KX-TVA200) or an optional LAN Interface Card (KX-TVA50). Off-site programming is also possible provided an optional Modem Card is installed in the VPS.

For more information, see Section 3, Installing KX-TVA Maintenance Console.

1.1.6 Recommendations for System Configuration

In order for the VPS to handle calls smoothly, generally there should be 1 VPS port for every 6 trunks (CO lines) connected to the PBX. If Automated Attendant (AA) service is used, allotting 1 VPS port for every 4 trunks (CO lines) should be sufficient. If the PBX and VPS have heavy traffic and callers cannot reach the VPS because of congestion, more VPS ports should be added. Recommendations are outlined in the following charts.

KX-TVA50

PBX		KX-TVA50	
No. of Trunks (CO Lines)	No. of Trunks (CO Lines) When Using AA Service	No. of Ports	No. of Optional Port Cards
1–6	1–4	1	0*
7–12	5–8	2	
13–18	9–12	3	1
19–24	13–16	4	
25–30	17–20	5	2
31–36	21–24	6	

* The factory-installed jacks should be sufficient.

KX-TVA200

PBX		KX-TVA200	
No. of Trunks (CO Lines)	No. of Trunks (CO Lines) When Using AA Service	No. of Ports	No. of Optional Port Cards
1–6	1–4	1	0*
7–12	5–8	2	
13–18	9–12	3	
19–24	13–16	4	
25–30	17–20	5	1
31–36	21–24	6	
37–42	25–28	7	
43–48	29–32	8	

PBX		KX-TVA200	
No. of Trunks (CO Lines)	No. of Trunks (CO Lines) When Using AA Service	No. of Ports	No. of Optional Port Cards
49-54	33-36	9	2
55-60	37-40	10	
61-66	41-44	11	
67-72	45-48	12	
73-78	49-52	13	3
79-84	53-56	14	
85-90	57-60	15	
91-96	61-64	16	
97-102	65-68	17	4
103-108	69-72	18	
109-114	73-76	19	
115-120	77-80	20	
121-126	81-84	21	5
127-132	85-88	22	
133-138	89-92	23	
139-144	93-96	24	

* The factory-installed jacks should be sufficient.

1.1.7 Compatible PBXs

The VPS can be integrated with the following PBXs using the integration types listed below.

KX-TVA50

PBX Model	Recommended Integration Type	Minimum Software Version for Recommended Integration Type
KX-TDA Series	DPT Integration	1.0
KX-TAW Series	DPT Integration	1.0
KX-TA1232	DPT Integration	Y831AA10621A
KX-TA824	APT Integration	1.0.44
KX-TA624	APT Integration	Y581A
KX-TD1232	DPT Integration	P231U91227A
KX-TD816	DPT Integration	P301O91227A
KX-TD500	DPT Integration	P171AA010312A
KX-TD308	DPT Integration	P871F91227
Third-party Manufacturer	Inband Integration or No Integration	—

KX-TVA200

PBX Model	Recommended Integration Type	Minimum Software Version for Recommended Integration Type
KX-TDA Series	DPT Integration	1.0
KX-TAW Series	DPT Integration	1.0
KX-TA1232	DPT Integration	Y831AA10621A
KX-TD1232	DPT Integration	P231U
KX-TD816	DPT Integration	P301O
KX-TD500	DPT Integration	P171AA010312A
KX-TD308	DPT Integration	P871F91227

1.2 Voice Mail Integration

1.2.1 Overview

In order for the VPS to function, it must be integrated with the PBX it is connected to. The type of integration that is used determines how voice (caller messages, VPS prompts, etc.) and data (extension status, button presses, etc.) are sent between the VPS and the PBX.

DPT Integration

When the VPS and PBX use DPT Integration, voices and data are sent digitally. The most significant advantage of DPT Integration is that the 2B+D communication provides 2 VPS ports for each port. DPT Integration requires the proper software level in the PBX as well as 4-conductor connections for each jack. In order for the VPS to function properly using DPT Integration, the PBX and VPS must be programmed to work together. For a list of PBXs that are compatible with DPT integration, see 1.1.7 Compatible PBXs.

To use DPT Integration, the lowest numbered jack of the VPS must be connected to the lowest numbered jack assigned as a Voice Mail Port Assignment in the PBX. See the DPT connection example(s) for your VPS model in the following sections:

1.2.2 Connection Examples—KX-TVA50

1.2.3 Connection Examples—KX-TVA200

Connect the other jacks to the VPS in the same order as they are found in Voice Mail Port Assignment in the PBX.

APT Integration (TVA50 only)

When the VPS and PBX use APT Integration, voices are sent using analogue technology, and data is sent digitally. APT Integration requires the proper software level in the PBX as well as 4-conductor connections for each jack. In order for the VPS to function properly using APT Integration, the PBX and VPS must be programmed to work together. For a list of PBXs that are compatible with APT integration, see 1.1.7 Compatible PBXs.

Inband Integration (TVA50 only)

When the VPS and PBX use Inband Integration, voices are sent using analogue technology, and data is sent using analogue DTMF tones.

No Integration (TVA50 only)

When the VPS and PBX use no integration, voices are sent using analogue technology and data is sent to the VPS through the use of standard audio signals, such as DTMF tones, busy signals, ringback tones, etc.

1.2.2 Connection Examples—KX-TVA50

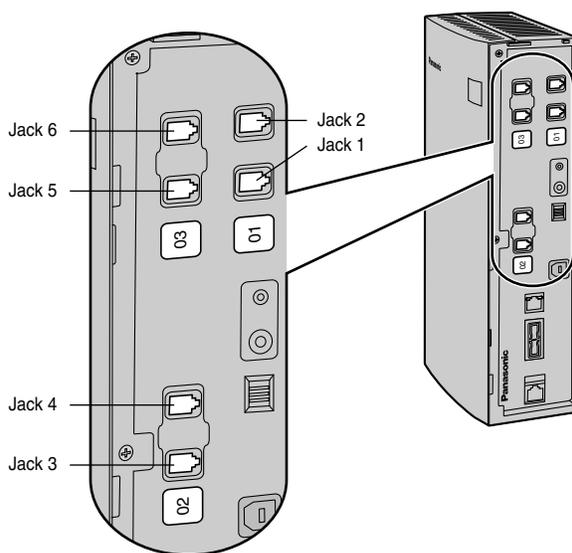

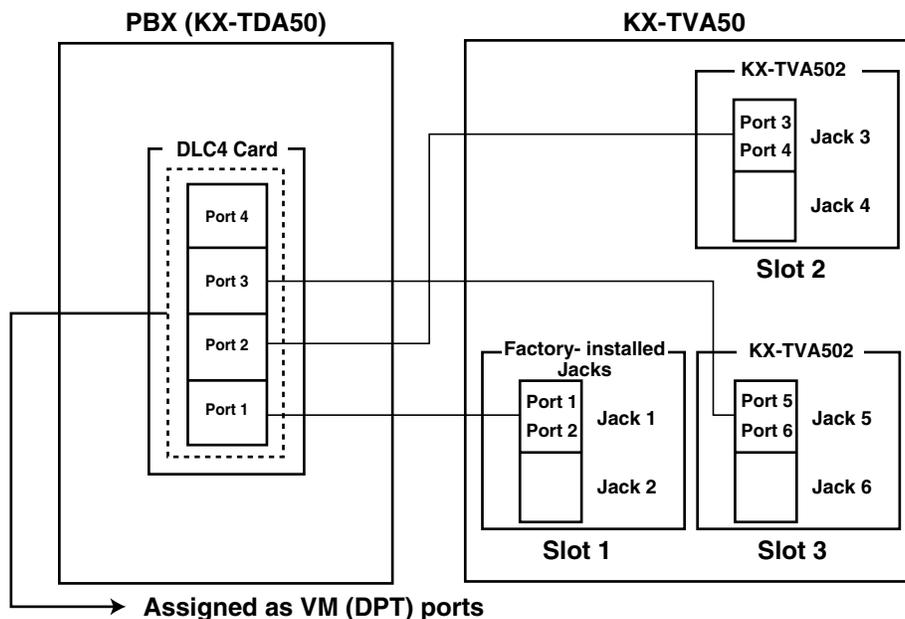

DPT Integration

When using DPT Integration, VPS jacks are connected to the digital extension ports of the PBX. Note that only odd numbered VPS jacks (1, 3, and 5) can be used. Each of these VPS jacks provides 2 VPS ports and can handle 1 call per port.

Note

- For DPT Integration, the lowest numbered jack of the VPS must be connected to the lowest numbered port of the Voice Mail group assigned through PBX programming.

Connection Example (Factory-installed Jacks and KX-TVA502 × 2, DPT Integration Mode)

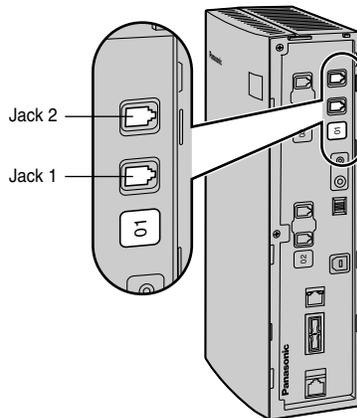

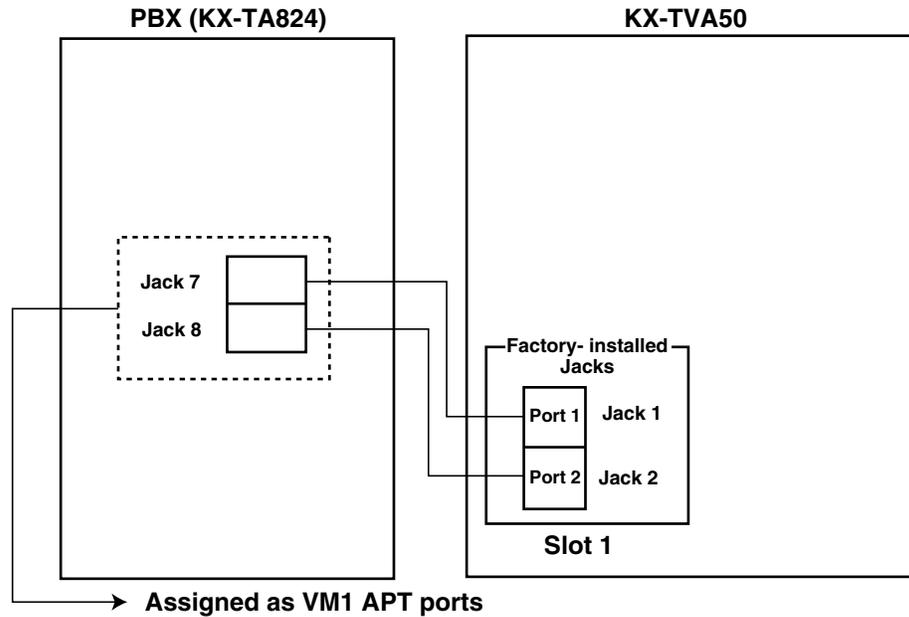

APT Integration

When using APT Integration, VPS jacks are connected to the hybrid extension jacks of the PBX. Each VPS jack provides 1 VPS port and can handle 1 call per port.

Note

- Jack 1 must be connected to the PBX.

Connection Example (Factory-installed Jacks, APT Integration Mode)

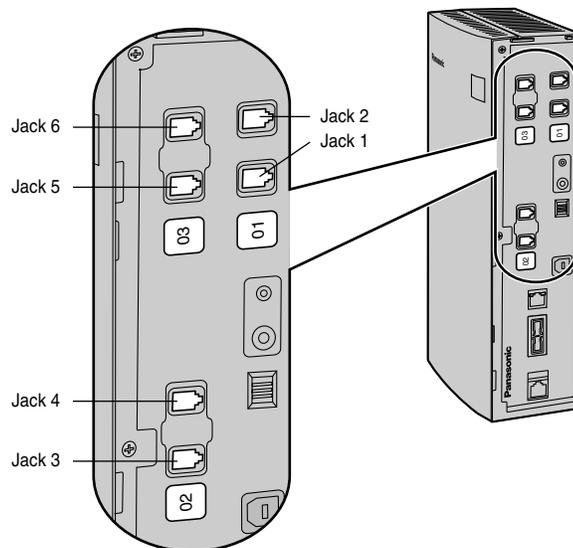

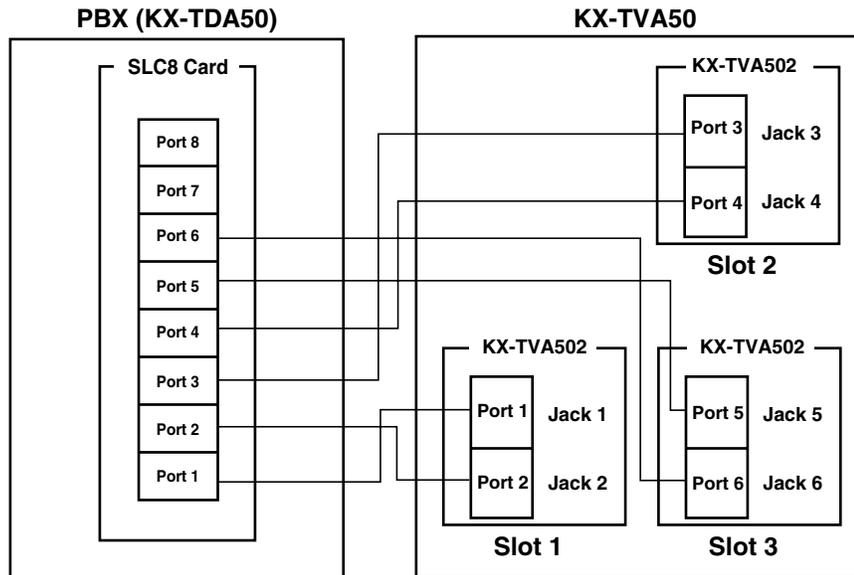

Note

- A maximum of 2 VPS jacks can be connected to the PBX.

Inband/No Integration

When using Inband/No Integration, VPS jacks are connected to the SLT ports of the PBX. Each VPS jack provides 1 VPS port and can handle 1 call per port.

Connection Example (Factory-installed Jacks and KX-TVA502 × 2, Inband/No Integration Mode)

1.2.3 Connection Examples—KX-TVA200

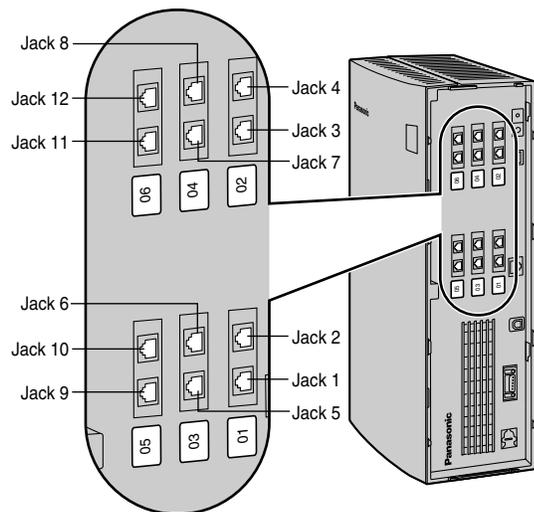

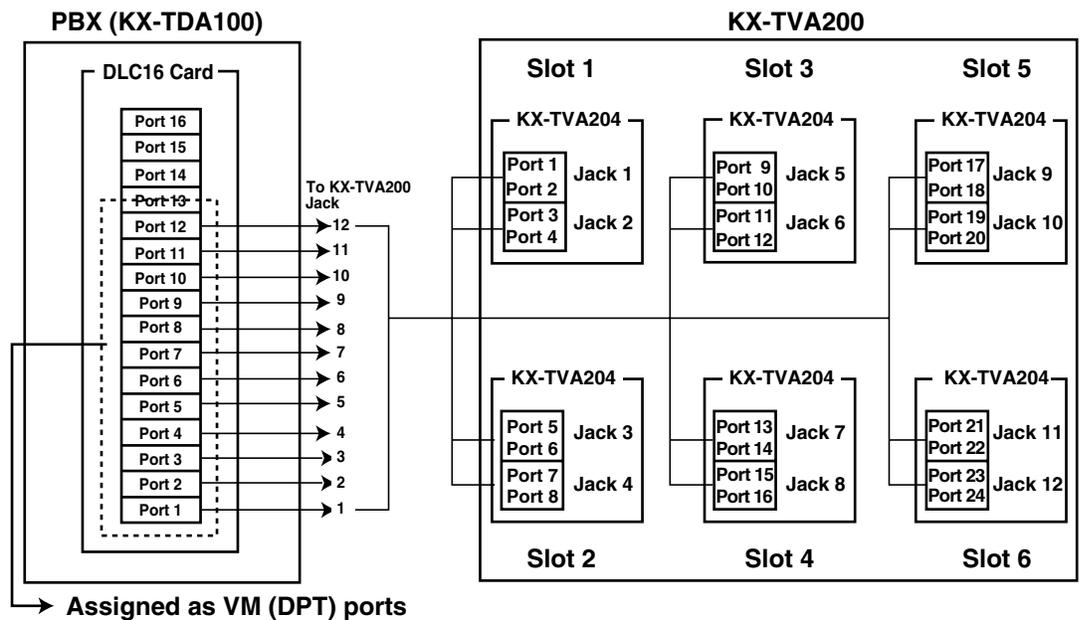

DPT Integration

The KX-TVA200 supports DPT Integration only, therefore it must be connected to the digital extension ports of the PBX. Each VPS jack provides 2 VPS ports and can handle 1 call per port.

Note

- For DPT Integration, the lowest numbered jack of the VPS must be connected to the lowest numbered port of the Voice Mail group assigned through PBX programming.

Connection Example (KX-TVA204 × 6, DPT Integration Mode)

1.3 Specifications

	Specification	KX-TVA50	KX-TVA200

	Pause Length	100 ms to 9900 ms (programmable)	
	Message Waiting Lamp	<ul style="list-style-type: none"> • APT/DPT Integration: Data Line of APT/DPT Interface • Inband Integration: Programmable DTMF sequence 	Data Line of DPT Interface

Specification		KX-TVA50	KX-TVA200
Software	Custom Services	Up to 100	
	Number of Messages	Unlimited	
	Length of Personal Greeting Message	Up to 360 s (programmable)	
	Message Retention Time	1 to 30 days, unlimited (programmable)	
	Maximum Message Length	1 to 60 min, unlimited (programmable)	
	Maximum Combined Length of Messages per Mailbox	1 to 120 min, unlimited (programmable)	1 to 600 min, unlimited (programmable)
	No. of Mailboxes	62 Subscriber + 2 Manager	1022 Subscriber + 2 Manager
	Reports	Mailbox Information, Call Account, Port Usage, Memory Usage, Mailbox Usage, Fax Call, Call Handling Statistic, Custom Service, Message Status, Subscriber Setup, Security Information, Hourly Statistics, E-mail	Mailbox Information, Call Account, Port Usage, HDD Usage, Mailbox Usage, Fax Call, Call Handling Statistic, Custom Service, Message Status, Subscriber Setup, Security Information, Hourly Statistics, E-mail
Environment	Environmental Requirements	5 °C to 40 °C (41 °F to 104 °F)	Refer to "Environmental Requirements", 2.1 Before Installation
	Power Source	100 V AC to 240 V AC, 0.25 A, 50 Hz/60 Hz	100 V AC to 240 V AC, 1.5 A, 50 Hz/60 Hz
	DC Input	9 V, 0.75 A (6.75 W)	40 V, 1.38 A (55.2 W)
	Dimensions (W × H × D)	249 mm (W) × 316 mm (H) × 73 mm (D) (9-13/16 in × 12-7/16 in × 2-7/8 in)	275 mm (W) × 376 mm (H) × 117 mm (D) (10-13/16 in × 14-13/16 in × 4-5/8 in)
	Weight (when all available option cards are installed)	No more than 1.7 kg (3.75 lb)	No more than 4.0 kg (8.82 lb)

*1 The recording capacity specification shown here for the KX-TVA50 applies to when 1 System Prompt language is installed. Recording capacity is reduced by about 1 hour for each additional System Prompt language that is installed.

Section 2

Installation

This section explains how to install the VPS and its optional cards.

2.1 Before Installation

Please read the following precautions before installing the VPS.

Installation Precautions

The VPS should be wall-mounted. Improper placement of the system may result in malfunction, noise, or discoloration. Avoid installing the VPS in the following places:

- in direct sunlight; in hot, cold, or humid places
- in areas where sulfuric gas can damage the equipment (e.g., areas near thermal springs, etc.)
- where shocks or vibrations are frequent or strong
- in dusty places or places where water or oil may come in contact with the unit
- near high frequency generating devices such as sewing machines, elevators or electric welders
- on or near computers or other office equipment, microwave ovens, or air conditioners (Ideally, the VPS should not be installed in the same room with any of these items, and should be at least 2 m (6 ft 7 in) away from televisions.)

Do not obstruct the areas around the PBX and the VPS. Both require open space above the unit for cooling and space on the sides for maintenance and inspection.

Wiring Precautions

Be sure to follow these instructions when wiring.

- Do not wire the telephone cable parallel to an AC power source, computer, etc. If cables are run near those wires, shield them with metal tubing or use shielded cables and ground the shields.
- Use protectors if running cables on the floor. Avoid running cables under carpets.
- Avoid sharing the power supply to the VPS with computers or other office equipment. Induction noise from such equipment may interrupt the VPS operation.

When making any connections or removing the cover, be sure the power switch is turned off.

When installing telephone wiring, basic safety precautions should always be followed to reduce the risk of fire, electric shock and injury to persons, including the following:

- Never install telephone wiring during a lightning storm.
- Never install telephone jacks in wet locations unless the jack is specifically designed for wet locations.
- Never touch uninsulated telephone wires or terminals unless the telephone line has been disconnected at the network interface.
- Use caution when installing or modifying telephone lines.

Note

- If you live in an area that has frequent power failures, we strongly recommend connecting the VPS and PBX to an uninterruptible power supply (UPS). Use only a UPS which can provide adequate power supply to all connected devices. Refer to the specifications for the power rating of your VPS and PBX.

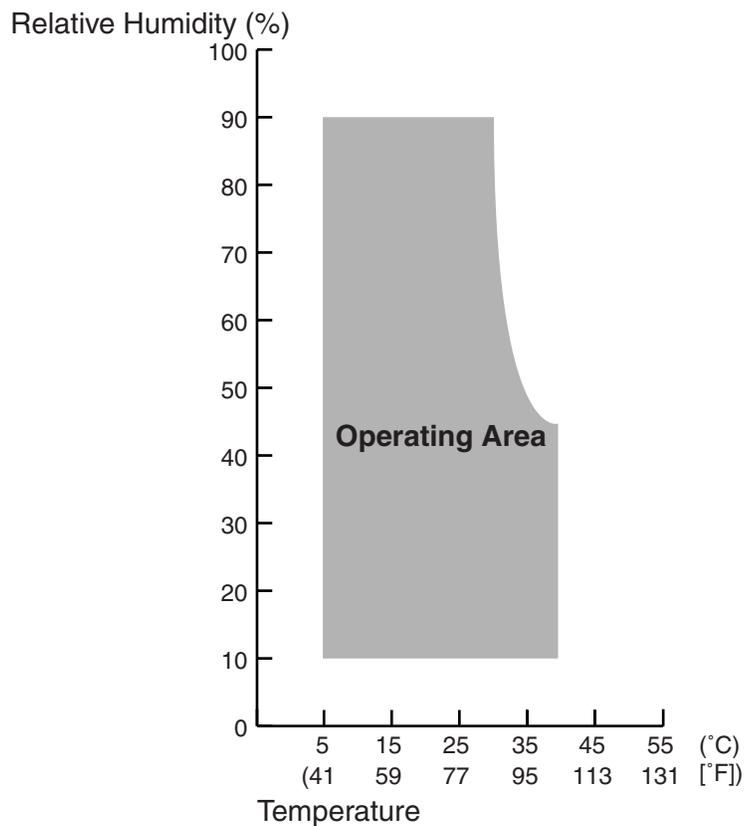

Environmental Requirements (KX-TVA200 only)

The hard disk drive is sensitive to cold, heat, dryness, humidity, shock, vibration, and magnetic fields. Please observe the conditions specified below.

Hard Disk Drive Usage Environment

Operating Temperature:	5 °C to 40 °C (41 °F to 104 °F)
Operating Humidity:	See the graph below.
Shock:	Under 5 G
Vibration:	5 Hz to 22 Hz : 0.0042 cm (0.020 in) displacement; double amplitude, 1 octave per minute. 23 Hz to 350 Hz : Under 0.5 G
Magnetic Field:	DC : 0.6 mT to 700 kHz : 0.7 μT 700 kHz to 1.5 MHz : 3 μT

Allowable Relative Humidity vs. Temperature

Necessary Tools (not supplied)

Twisted pair 4-conductor cables are needed for connecting the VPS to the PBX. For the KX-TVA50, twisted pair 2-conductor cables are needed if using Inband or None Integration.

A USB cable is needed when connecting the VPS to the PC that will be used for programming via the KX-TVA Maintenance Console.

2.2 Unpacking

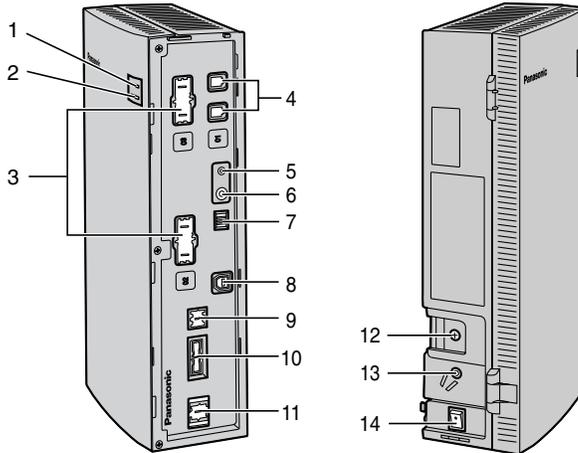

The following items are included with the VPS.

	KX-TVA50	KX-TVA200
Main Unit	1	1
AC Adaptor	1	1
AC Cord	1	1
Screws (Wall Mounting)	5	5
Washers (Wall Mounting)	5	5
Cable strap	1	1
CD-ROM	1	1

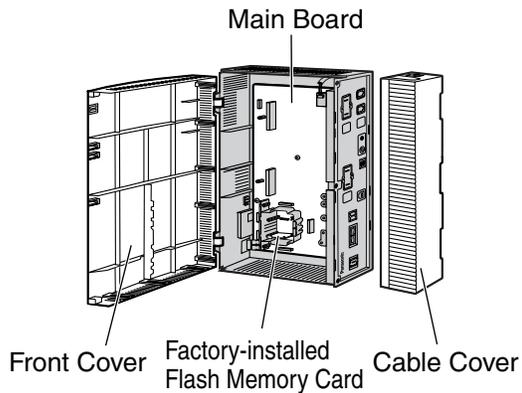

2.3 Names and Locations

Outside/Inside View

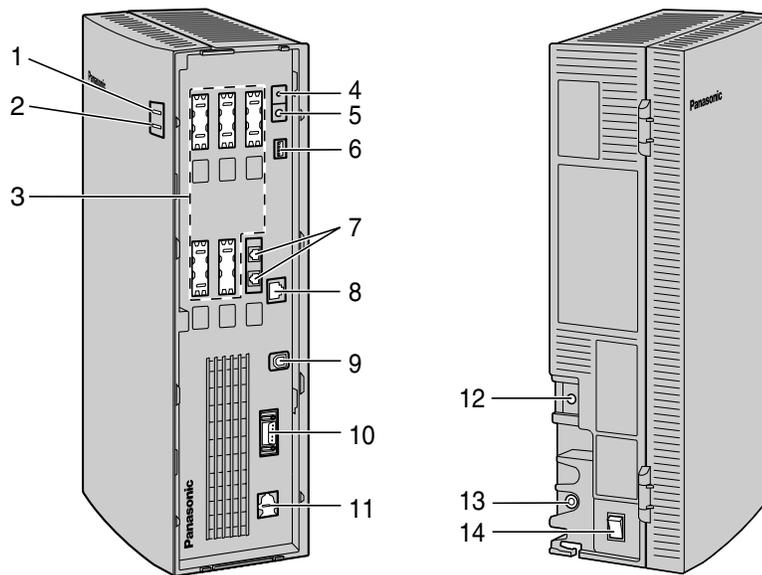

KX-TVA50

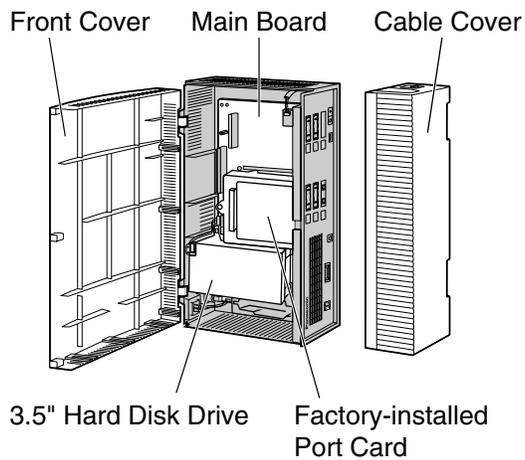

1. Run Indicator
2. Alarm Indicator
3. Dummy Cover Plates (for Port Card Slots 2 and 3)
4. Factory-installed Jacks
5. Reset Button
6. Shutdown Button
7. Mode Switch
8. USB Port
9. Dummy Cover Plate (for LAN Interface Card)
10. Dummy Cover Plate (Reserved)
11. Dummy Cover Plate (for Modem Card)
12. Ground Terminal
13. DC IN
14. Power Switch

KX-TVA200

1. Run Indicator
2. Alarm Indicator
3. Dummy Cover Plates (for Port Card Slots 2 to 6)
4. Reset Button
5. Shutdown Button
6. Mode Switch
7. Factory-installed Jacks
8. LAN Port
9. USB Port
10. VM-Link
11. Dummy Cover Plate (for Modem Card)
12. Ground Terminal
13. DC IN
14. Power Switch

System Components

Run Indicator

Lights during normal operation; flashes when the system is off-line and cannot receive calls.

Alarm Indicator

Flashes when a system error is detected or while the VPS is preparing to shutdown. Lights when the shutdown procedure is complete.

Reset Button

Resets the VPS.

Note

- Make sure the VPS is not in use before pressing the Reset Button.

Shutdown Button

Initiates the shutdown procedure. When the Alarm Indicator lights after pressing the Shutdown Button, you may safely turn off the power switch.

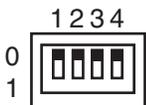

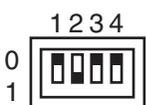

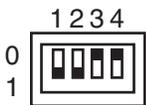

Note

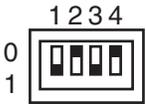

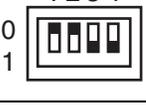

- Make sure the VPS is not in use before pressing the Shutdown Button.

Mode Switch

Used to perform one of several administration/service operations by selecting one of 16 switch positions. After setting the Mode Switch to the appropriate position, shut down and restart the VPS. Change the position of the switches by using the tip of a pointed object, such as a pen.

The available Mode Switch positions are shown in the following table. The black area in the switch illustration indicates the direction of the switch.

Switch Position	Operation
0 	Puts the VPS in normal mode.
1	Reserved
2 	Puts the VPS in DPT Integration mode. Auto Configuration starts and all ports are set to provide Automated Attendant service.
3 	Puts the VPS in DPT Integration mode. Auto Configuration starts and all ports are set to provide Voice Mail service.
4	Reserved

Switch Position	Operation
5 	Initializes the VPS. All settings are reset to their default values. Recorded messages are erased. System Prompts (including customized prompts) are preserved.
6 	<i>KX-TVA200 only</i> Puts the VPS in hard disk test mode.
7	Reserved
8 	<i>KX-TVA200 only</i> Initializes the VPS. All settings are reset to their default values. Recorded messages and customized prompts are erased. All System Prompts are reset to their defaults. CAUTION All user-recorded prompts are erased.
9	Reserved
10 	<i>KX-TVA50 only</i> Puts the VPS in APT Integration mode. Auto Configuration starts and all ports are set to provide Automated Attendant service.
11 	<i>KX-TVA50 only</i> Puts the VPS in APT Integration mode. Auto Configuration starts and all ports are set to provide Voice Mail service.
12 	Primary Language will be set to use Language 1 prompts.*1
13 	Primary Language will be set to use Language 2 prompts.*1
14 	Primary Language will be set to use Language 3 prompts.*1
15	Reserved

*1 If the selected language has no prompts, no prompts will be heard.

When setting the Mode Switch to any position (except 0):

1. Disconnect the port cables from the VPS.
2. Turn the power switch off.
3. Set the Mode Switch.

4. Turn the power switch back on.
5. Connect the port cables.
6. Confirm that the Run Indicator blinks the same number of times as the Mode Switch position (e.g., 5 blinks for switch position 5, etc.).
 - This may take several minutes. The Alarm Indicator and Run Indicator will first blink intermittently before the Run Indicator blinks to indicate the Mode Switch position.
7. Turn the power switch off at the VPS.
8. Set the Mode Switch to position 0.
9. Turn the power switch back on at the VPS.

LAN Port (Optional for KX-TVA50)

Used to access the VPS over an Ethernet network.

USB Port

Used to access the VPS via USB.

VM Link (Currently unavailable)

A VPS-PBX connection interface to be implemented in the future via software upgrade.

Ground Terminal

Must be connected to an ground source with less than 1 Ω resistance.

DC IN

Used to supply power to the VPS from the AC Adaptor.

Power Switch

Starts the system and begins the self-test.

SAFETY PRECAUTION: When making any connections or removing the cover, be sure the power switch is turned off.

Factory Installed Flash Memory Card (KX-TVA50 only)

Stores all system programming and system prompts, and allows up to 4 hours of message recording time.

Hard Disk Drive (KX-TVA200 only)

Stores all system programming and system prompts, and allows up to 1000 hours of message recording time.

Note

- The actual hard disk drive mounted on your VPS may look different from the ones illustrated in this manual.

2.4 Installation Overview

The following is an overview of the steps needed to install optional cards and prepare the VPS hardware for use. Once hardware installation is complete, see *Configuring the System* for instructions on software setup and VPS customization.

CAUTION

The information below is only intended as an overview of the installation process. When installing the VPS, refer to the sections listed below for detailed instructions.

1. Open the covers (see 2.5 Opening/Closing the Covers).
2. Remove the Dummy Cover Plates (see 2.6 Removing the Dummy Cover Plates).
3. Install the optional cards (see 2.7 Installing Optional Cards—KX-TVA50 or 2.8 Installing Optional Cards—KX-TVA200).
4. Connect the VPS to the appropriate extension ports of the PBX (see 1.2.2 Connection Examples—KX-TVA50 or 1.2.3 Connection Examples—KX-TVA200). Use 4-conductor or 2-conductor cable as necessary (see 2.9 PBX Connections).
5. Connect the VPS to the PC to be used for programming (see 2.10 PC Connection).
6. Connect the VPS to ground (see 2.11 Frame Ground Connection).
7. Connect the AC adaptor to the VPS and to the power outlet (see 2.12 Connecting the AC Adaptor).

CAUTION

The power cord is the main disconnect device. Make sure that the power outlet is located near the VPS and is easily accessible.

8. Secure the cables (see 2.13 Securing the Cables).
9. Initialize the VPS (see 2.14 Initializing the VPS During Installation).
10. Close the covers (see 2.5 Opening/Closing the Covers).
11. Wall mount the VPS and AC adaptor (see 2.15 Wall Mounting).

CAUTION

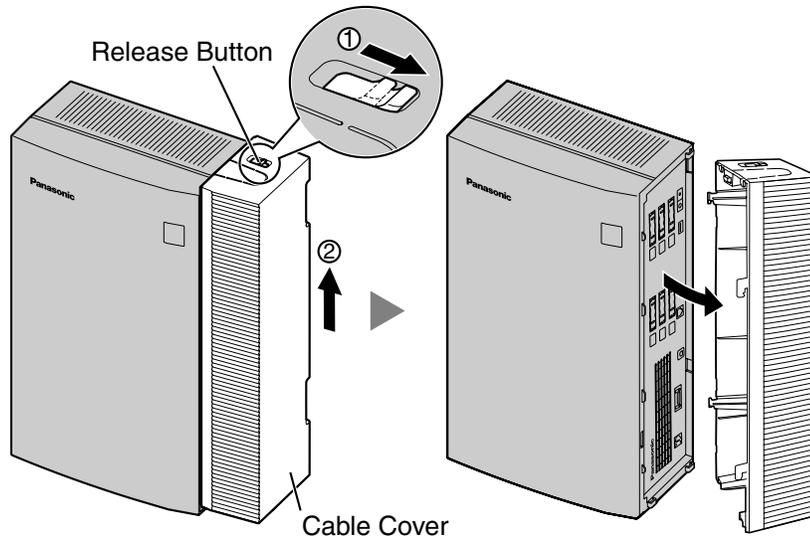

To turn off the power on the VPS, first press the Shutdown button, wait for the Alarm Indicator to light, then turn off the power switch. Turning off the power switch before the Alarm Indicator lights may cause the VPS to take an exceptionally long time (up to 10 minutes) to start up the next time the power is turned on.

2.5 Opening/Closing the Covers

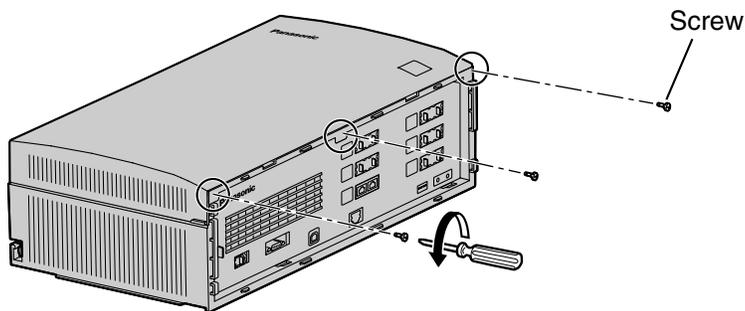

The model shown here is the KX-TVA200, however this procedure is the same for the KX-TVA50.

Opening the Covers

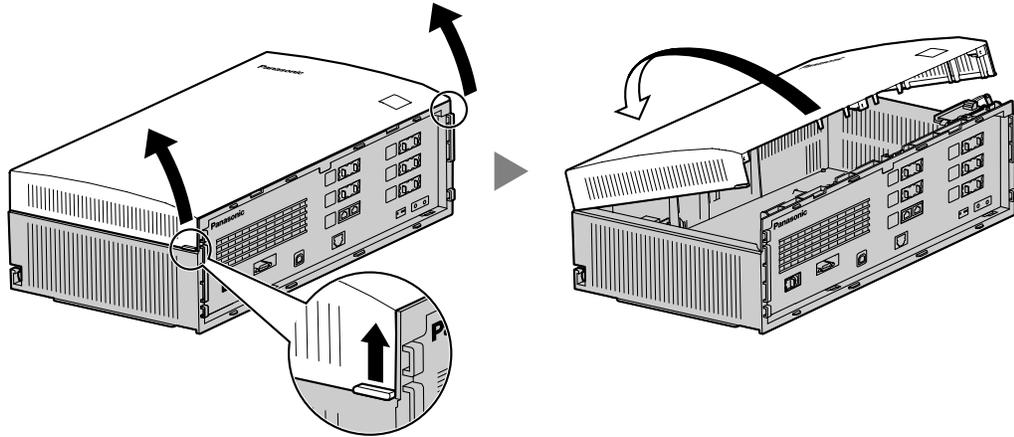

1. Push the release button in the direction shown below (1), and slide the cable cover in the direction shown below (2). Turn the cable cover away from the unit and remove it.

2. Remove the 3 screws.

3. While holding both tabs located on the sides of the front cover, swing the cover open as shown.

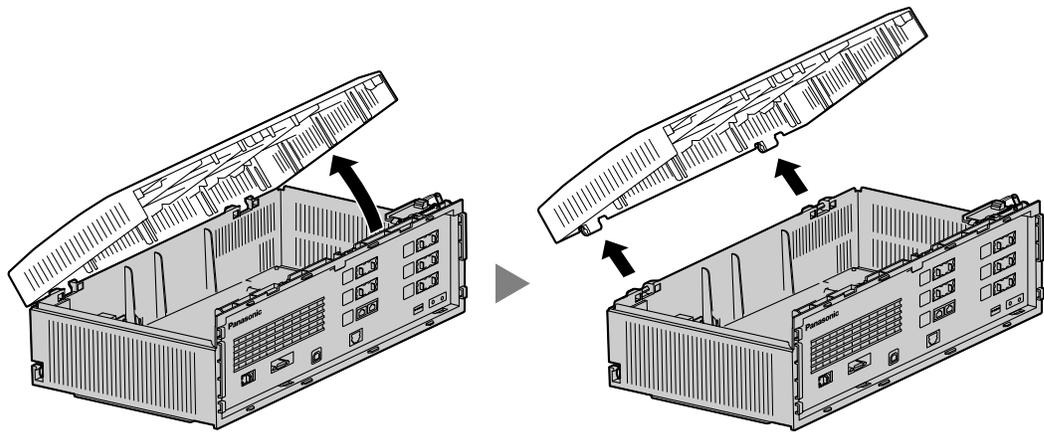

Removing/Attaching the Front Cover

You may also detach the front cover from its hinges.

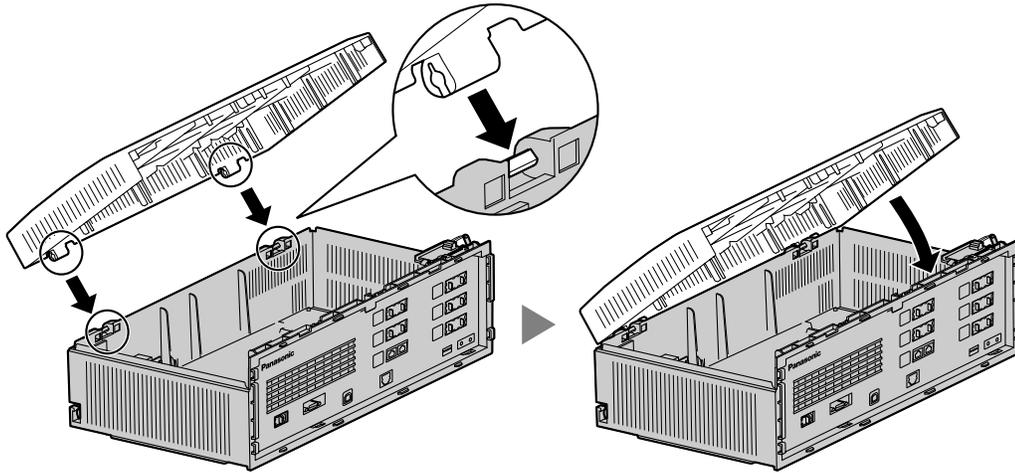

Removing the Front Cover

While holding the front cover open at a 45° angle, lift the cover away from the unit as shown.

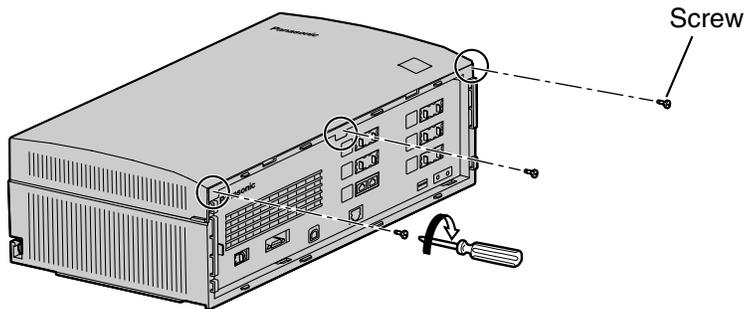

Attaching the Front Cover

Fit the front cover to the main unit as shown below, then close the front cover.

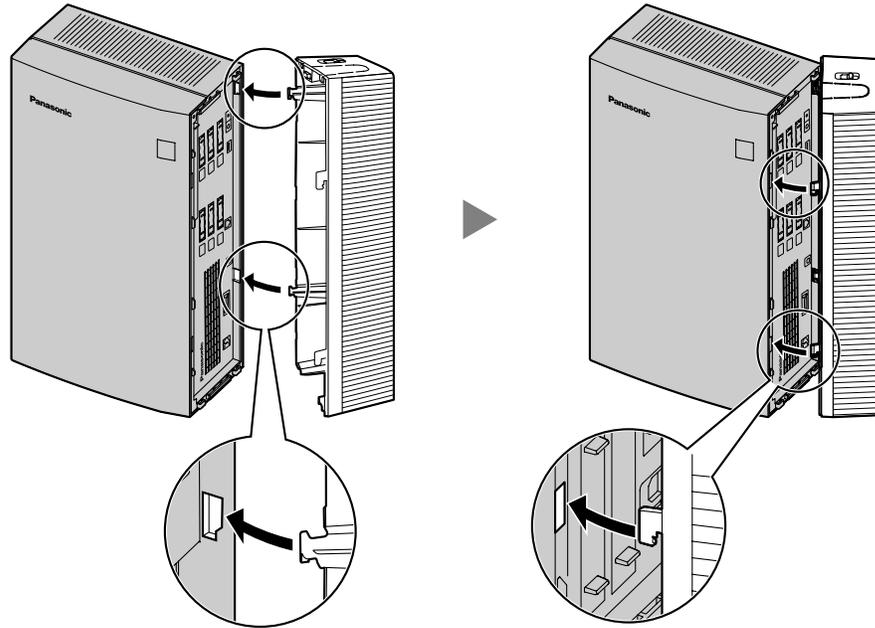

Closing the Covers

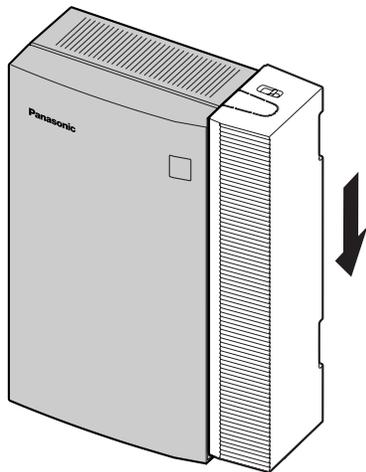

1. Close the front cover, then tighten the 3 screws.

2. Attach the rear hooks on the cable cover to the main unit, then swing the cable cover closed so that the front hooks fit in place.

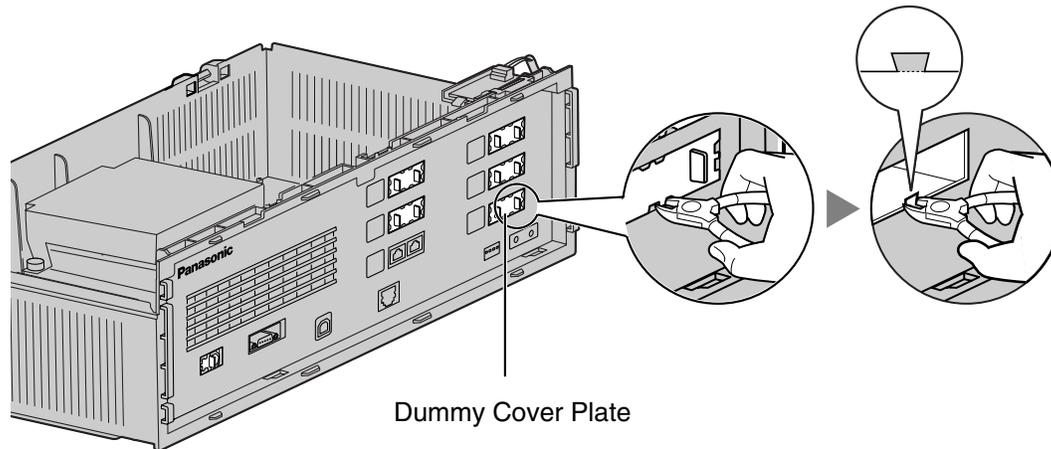

3. Slide the cable cover down until it locks.

2.6 Removing the Dummy Cover Plates

Before installing optional cards, cut and remove the appropriate dummy cover plates from the main unit using cutting pliers, as shown below.

The model shown here is the KX-TVA200, however this procedure is the same for the KX-TVA50.

CAUTION

For safety reasons, smooth the cut edges after removing the dummy cover plates.

2.7 Installing Optional Cards—KX-TVA50

The KX-TVA50 can be expanded by installing the following optional cards.

Model	Model Name	Maximum Quantity
KX-TVA502	2-Port Hybrid Expansion Card	2
KX-TVA503	2-Port Digital Expansion Card	2
KX-TVA524	Memory Expansion Card	1
KX-TVA594	LAN Interface Card	1
KX-TVA296	Modem Card	1

CAUTION

Before installing optional cards, it is very important that the power to the unit be turned off. Before touching the optional cards or any components within the unit, discharge any static electricity from your body by touching the ground terminal (if it is connected to ground) or by using an grounding strap (user-supplied). This is a critical step that must be performed to protect the circuit board and other components from damage caused by static electricity.

2.7.1 2-Port Hybrid Expansion Card (KX-TVA502)

Each KX-TVA502 adds 2 ports to the VPS which can be used for DPT, APT, Inband, or No Integration. KX-TVA502 cards can be installed in slots 2 and 3 of the VPS.

Integration Type	Basic Configuration		Maximum Configuration KX-TVA502 x 2	
	No. of Usable Jacks*	No. of Ports	No. of Usable Jacks*	No. of Ports
DPT Integration	1	2	3 (1 per card)	6
APT Integration	2	2	6	6
Inband/No Integration	2	2	6	6

* When using DPT Integration, only odd numbered jacks (1, 3, and 5) can be used. Each jack provides 2 VPS ports.

Included Items

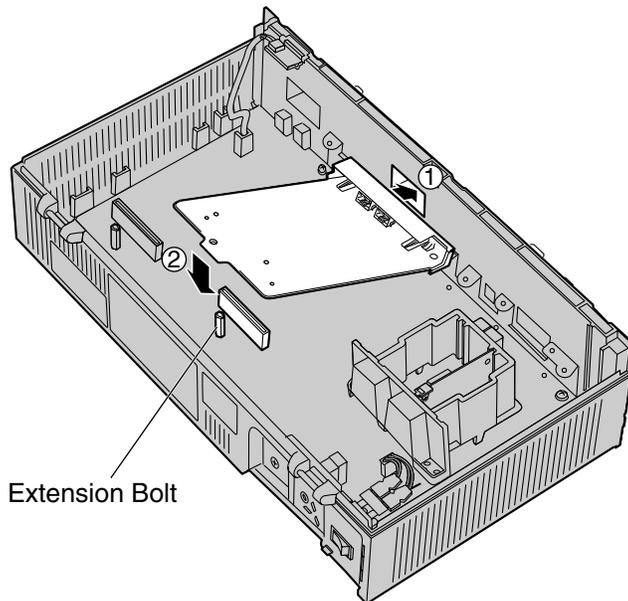

Screw × 2

Installation

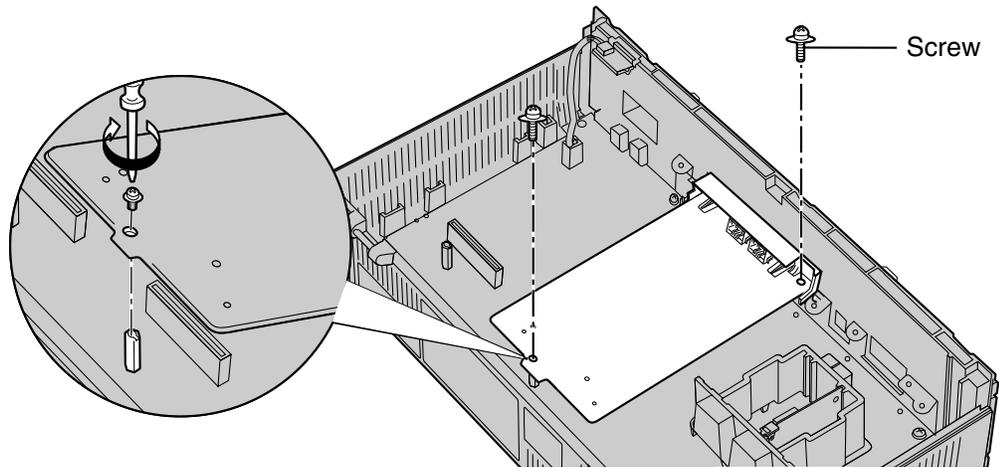

1. Position the front of the card so that the jacks fit in the open slot. Holding the card firmly in place, lower the other end of the card so that the card's hole fits over the extension bolt.

CAUTION

When installing optional cards, do not put pressure on the main board. Doing so may result in damage to the VPS.

2. Insert and tighten the screws as shown.

Note

- The KX-TVA502 operates at SELV.

2.7.2 2-Port Digital Expansion Card (KX-TVA503)

Each KX-TVA503 adds 2 ports to the VPS which can be used for DPT Integration. KX-TVA503 cards can be installed in slots 2 and 3 of the VPS.

Integration Type	Basic Configuration		Maximum Configuration KX-TVA503 x 2	
	No. of Jacks	No. of Ports	No. of Jacks	No. of Ports
DPT Integration	1	2	3 (1 per card)	6

Included Items

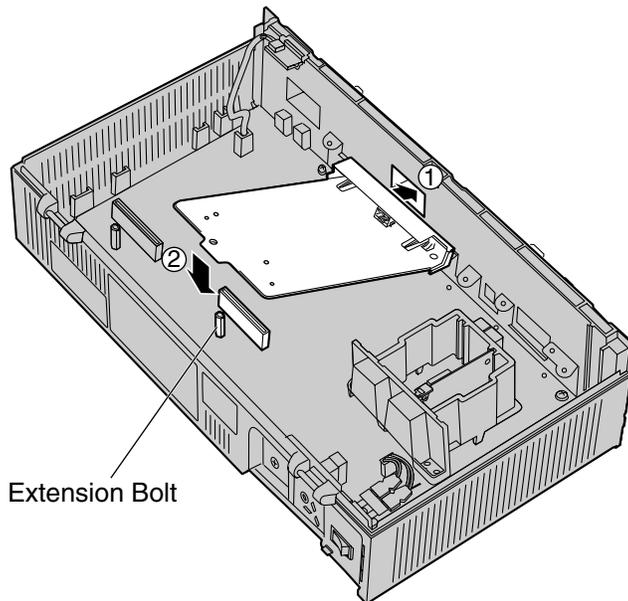

Screw × 2

Installation

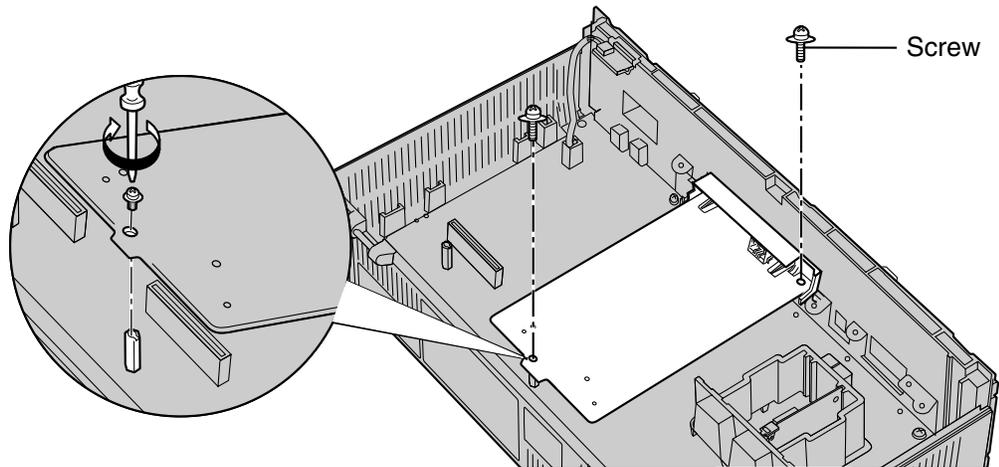

1. Position the front of the card so that the jacks fit in the open slot. Holding the card firmly in place, lower the other end of the card so that the card's hole fits over the extension bolt.

CAUTION

When installing optional cards, do not put pressure on the main board. Doing so may result in damage to the VPS.

2. Insert and tighten the screws as shown.

Note

- The KX-TVA503 operates at SELV.

2.7.3 Memory Expansion Card (KX-TVA524)

The KX-TVA524 adds an additional 4 hours of recording time to the VPS.

Included Items

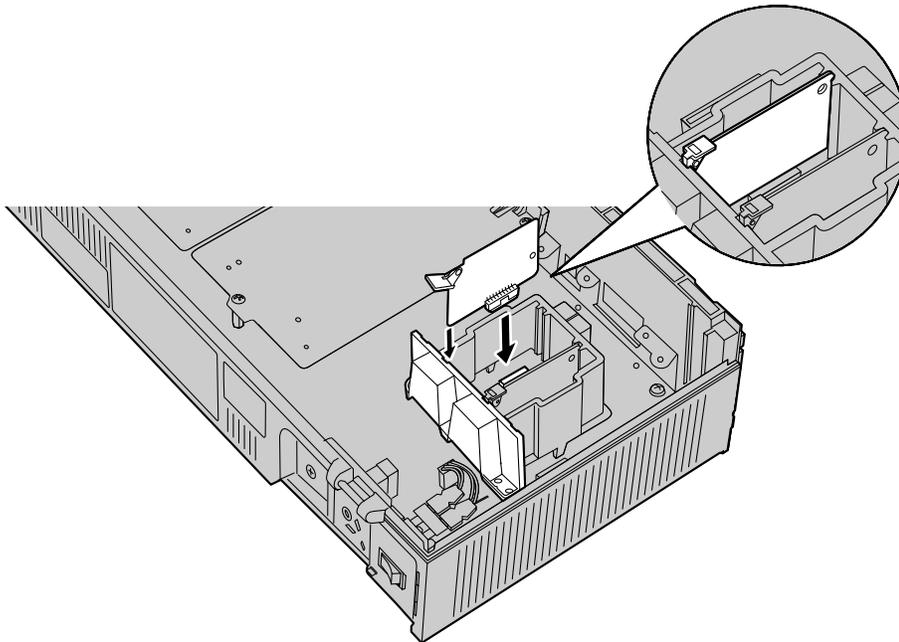

None

Installation

1. Insert the card between the guide rails and slide it down as shown.
2. Secure the latch by flipping it toward the center of the card and slightly pressing down on it.

CAUTION

When installing optional cards, do not put pressure on the main board. Doing so may result in damage to the VPS.

2.7.4 LAN Interface Card (KX-TVA594)

The KX-TVA594 allows the VPS to be accessed over a local area network (LAN) for administration purposes.

Included Items

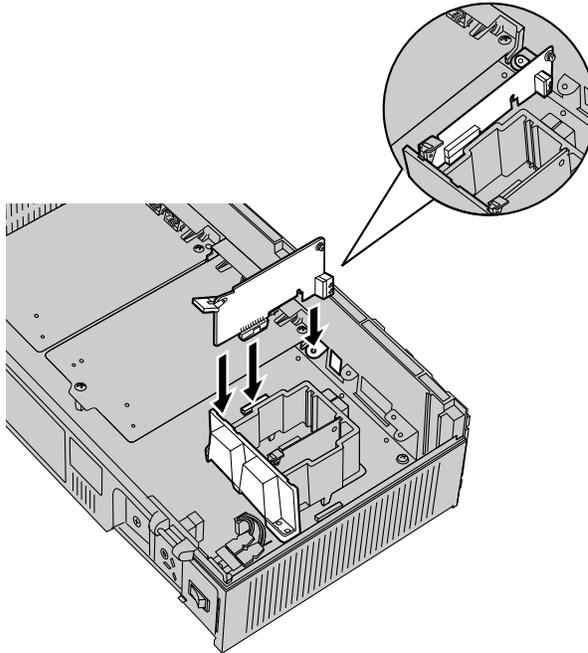

Screw × 1

Installation

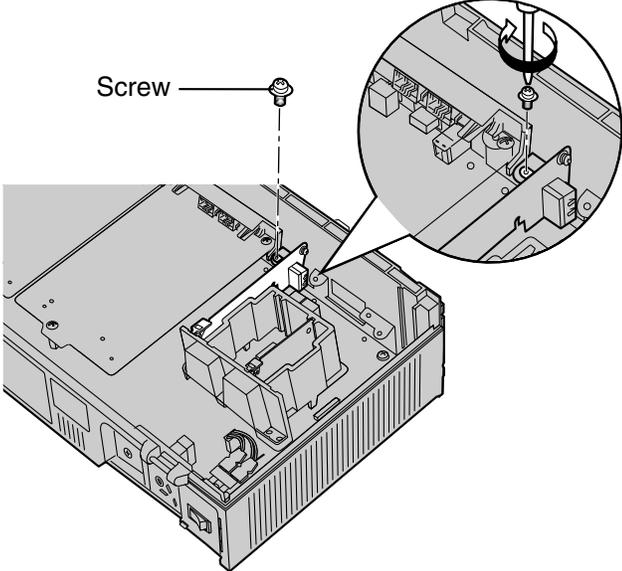

1. Insert the card between the guide rails and slide it down as shown.
2. Secure the latch by flipping it toward the center of the card and slightly pressing down on it.

CAUTION

When installing optional cards, do not put pressure on the main board. Doing so may result in damage to the VPS.

3. Insert and tighten the screw as shown.

2.7.5 Modem Card (KX-TVA296)

The KX-TVA296 allows the VPS to be accessed remotely for administration purposes.

Included Items

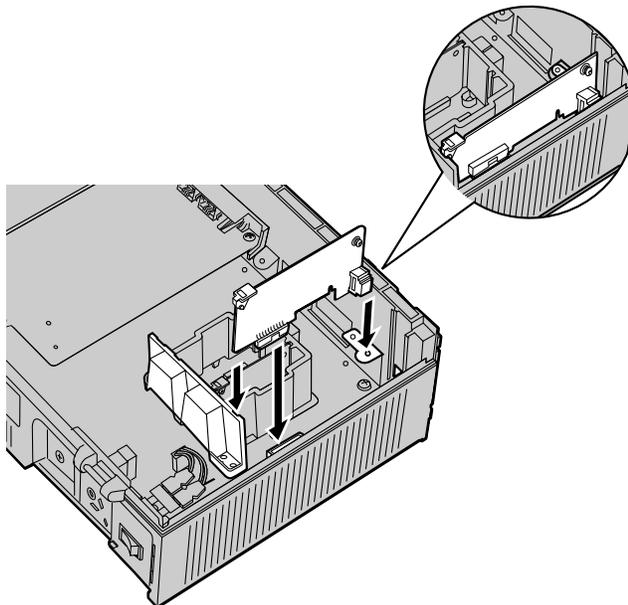

Screw × 1

Installation

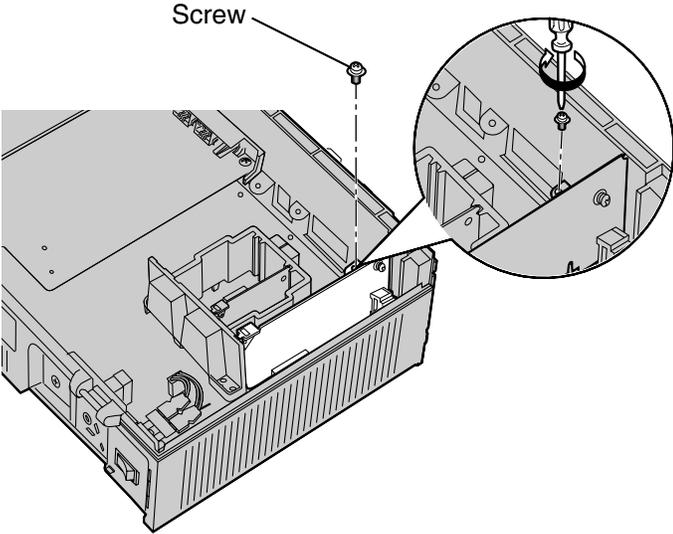

1. Insert the card between the guide rails and slide it down as shown.
2. Secure the latch by flipping it toward the center of the card and slightly pressing down on it.

CAUTION

When installing optional cards, do not put pressure on the main board. Doing so may result in damage to the VPS.

3. Insert and tighten the screw as shown.

Note

- The KX-TVA296 operates at TNV.

2.8 Installing Optional Cards—KX-TVA200

The KX-TVA200 can be expanded by installing the following optional cards.

Model	Model Name	Maximum Quantity
KX-TVA204	4-Port Digital Expansion Card	5
KX-TVA296	Modem Card	1

CAUTION

Before installing optional cards, it is very important that the power to the unit be turned off. Before touching the optional cards or any components within the unit, discharge any static electricity from your body by touching the ground terminal (if it is connected to ground) or by using an grounding strap (user-supplied). This is a critical step that must be performed to protect the circuit board and other components from damage caused by static electricity.

2.8.1 4-Port Digital Expansion Card (KX-TVA204)

Each KX-TVA204 adds 4 ports to the VPS which can be used for DPT Integration. KX-TVA204 cards can be installed in slots 2 to 6 of the VPS.

Integration Type	Basic Configuration		Maximum Configuration (KX-TVA204 x 6)	
	No. of Jacks	No. of Ports	No. of Jacks	No. of Ports
DPT Integration	2	4 (2 per jack)	12	24 (2 per jack)

Included Items

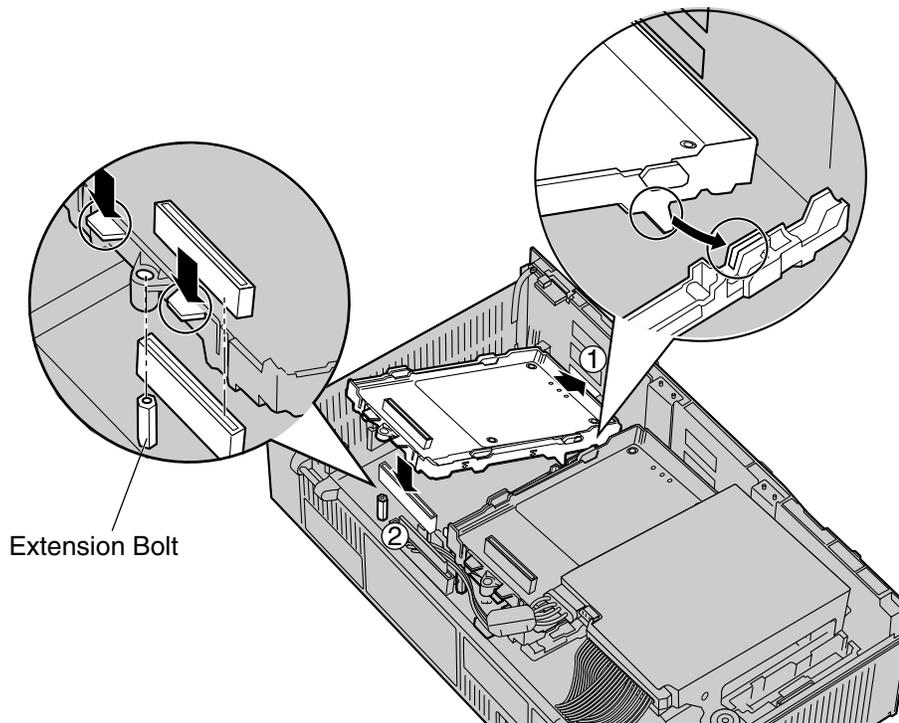

Extension Bolt × 3, Screw × 3

Installation

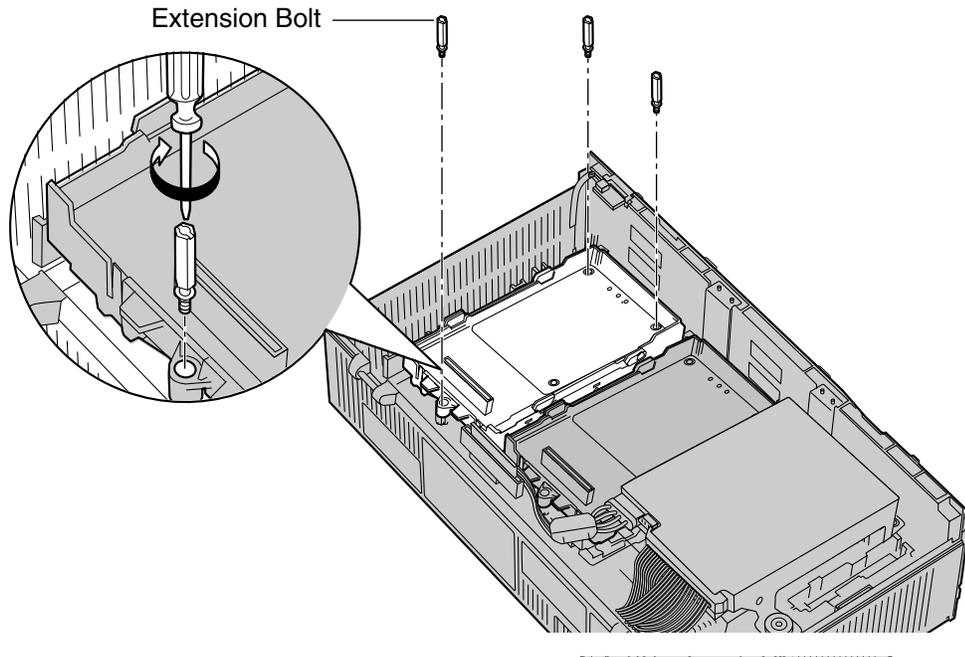

1. Position the front of the card so that the jacks fit in the open slot. Make sure that the tabs on both sides of the card fit into place. Holding the card firmly in place, lower the other end of the card so that the card's hole fits over the extension bolt.

CAUTION

When installing optional cards, do not put pressure on the main board. Doing so may result in damage to the VPS.

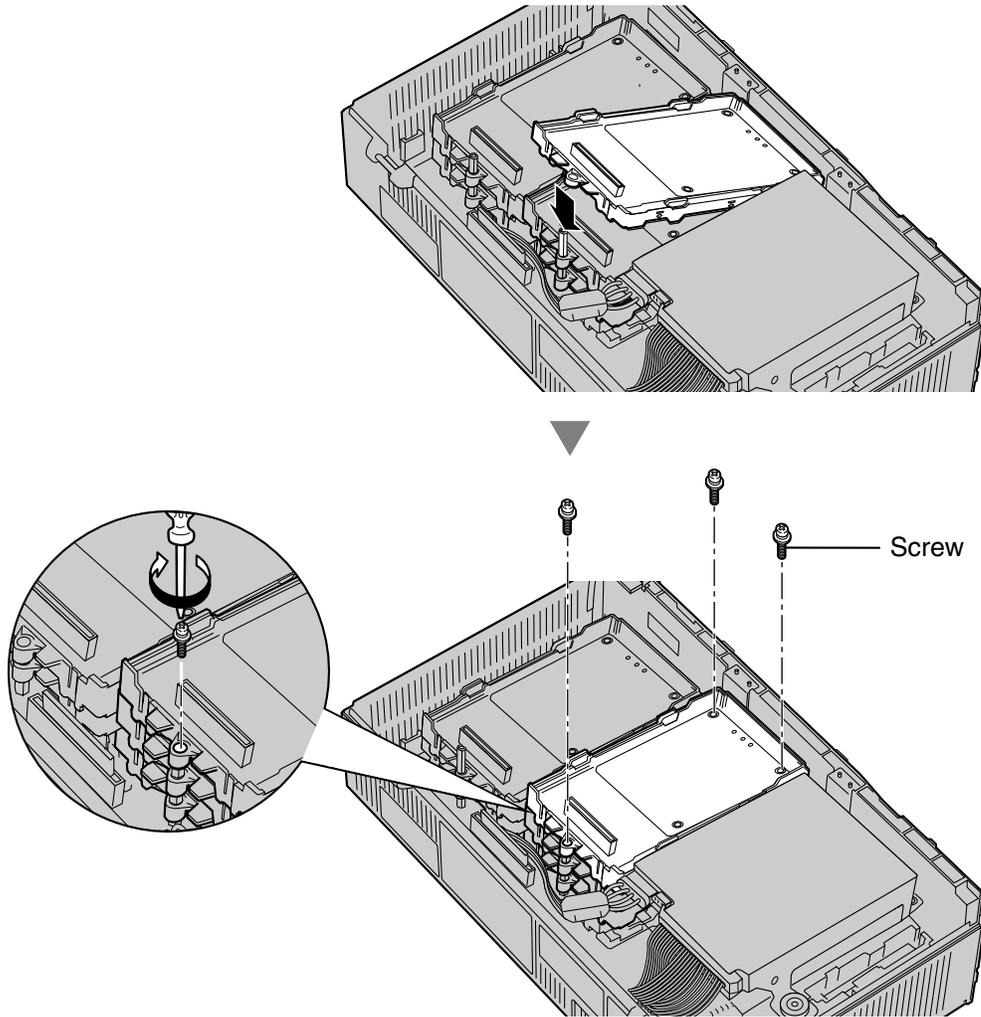

2. Insert the new extension bolts (included with the card) into the holes on the card, and tighten them to secure the card.

Installing Cards in Slot 5 or Slot 6

When installing a card in Slot 5 or 6, secure the card using the screws included with the card, instead of the extension bolts.

Note

- The KX-TVA204 operates at SELV.

2.8.2 Modem Card (KX-TVA296)

The KX-TVA296 allows the VPS to be accessed remotely for administration purposes.

Included Items

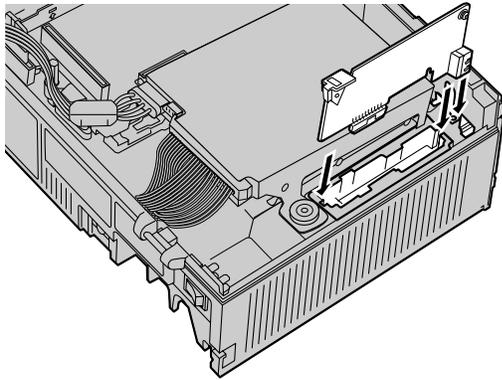

Screw × 1

Installation

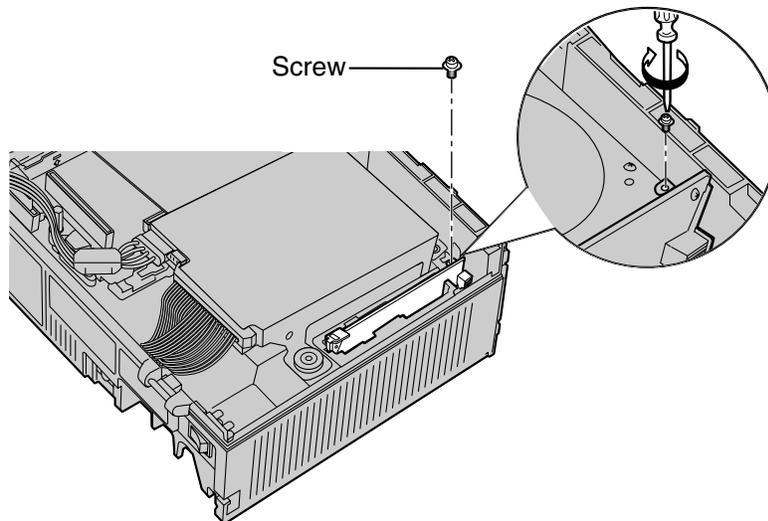

1. Insert the card between the guide rails and slide it down as shown.

CAUTION

When installing optional cards, do not put pressure on the main board. Doing so may result in damage to the VPS.

2. Insert and tighten the screw as shown.

Note

- The KX-TVA296 operates at TNV.

2.9 PBX Connections

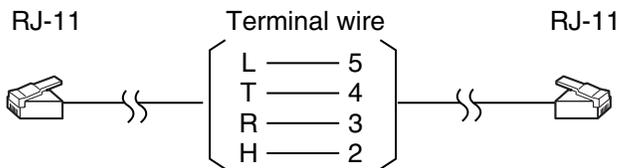

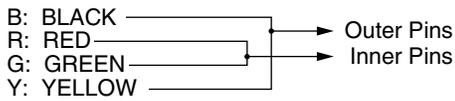

2.9.1 Connecting to the PBX

One jack of the VPS can be connected to 1 jack of the PBX. For APT/DPT Integration, use a 4-conductor cable to connect the VPS and PBX. For Inband or None Integration (KX-TVA50 only), use a 2-conductor (T and R) cable.

4-Conductor Cable

Modular Connection

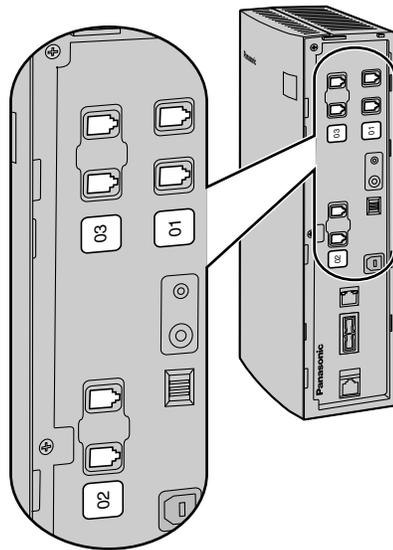

2.9.2 Modular Plug Connection

Insert the modular plug of each telephone cord into an available modular jack of the VPS.

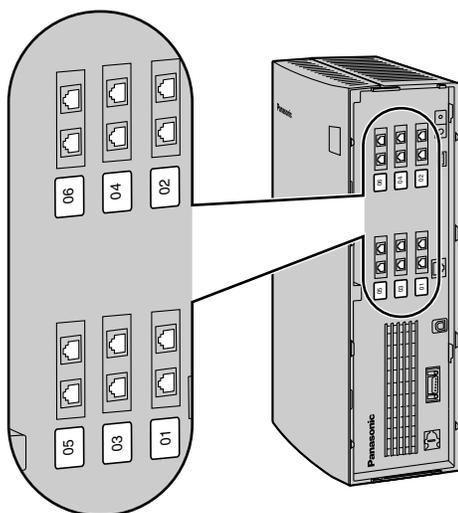

Note

- Connections should be made using solid twisted pair copper conductors and a minimum of 24 gauge cables that comply with the electrical specifications for Category 3 wiring as detailed in the ANSI/EIA/TIA-570A Building Wiring Standards. The maximum length of each VPS-PBX connection should be under 100 m (330 ft).

KX-TVA50

KX-TVA200

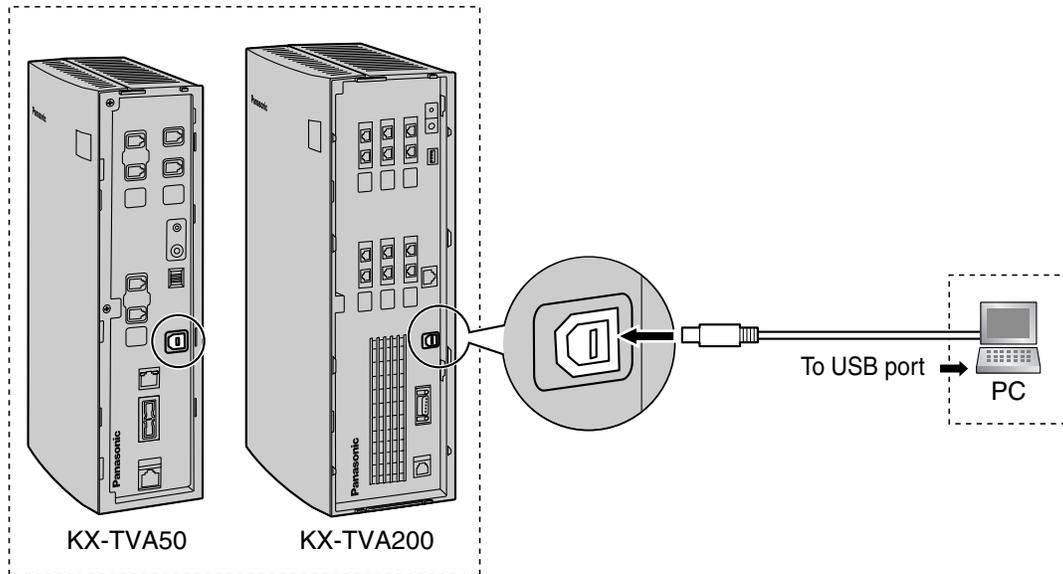

2.10 PC Connection

A PC connected to the VPS can be used to program various VPS settings.

2.10.1 USB Connection

An on-site PC can be connected to the VPS via USB.

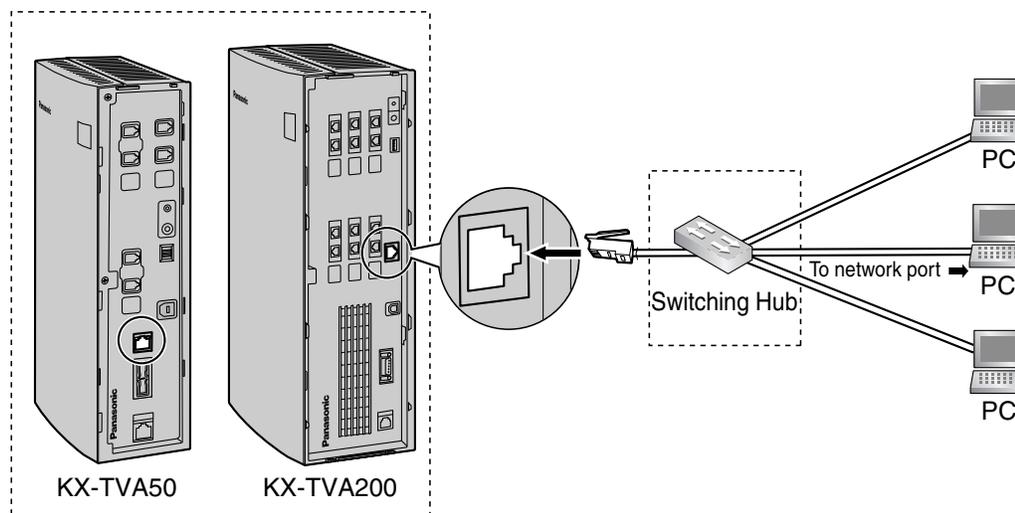

Note

- We recommend using a USB cable of no more than 5 m (16 ft 5 in) in length.

2.10.2 LAN Connection

An on-site PC can be connected to the VPS over a local area network (LAN). For the KX-TVA50, an optional LAN Interface Card must be installed in the VPS.

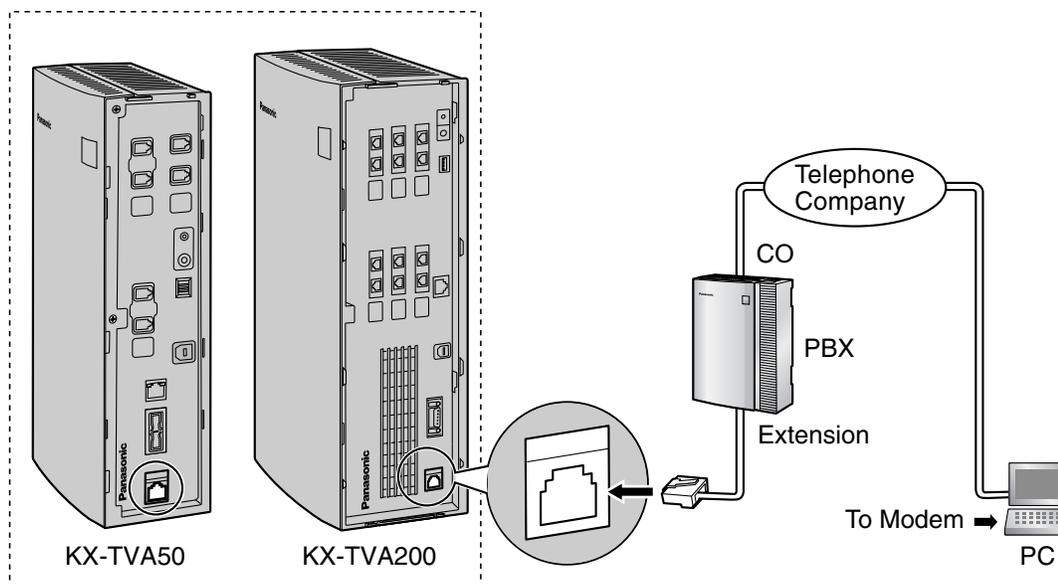

Note

- Use a category 5 cross cable (user-supplied) when connecting the VPS to a switching hub.

2.10.3 Modem Connection

To connect an off-site PC to the VPS remotely via modem, an optional Modem Card must be installed in the VPS and the off-site PC must also be equipped with a modem.

Note

- Do not connect the modem directly to the network. Connect the modem to the PBX as you would a standard single line telephone (SLT). Off-site programming is possible if trunk (CO line) calls from the remote PC are routed to the extension port connected to the VPS modem. Note that the effective data transfer rate of the internal modem (maximum 33 600 bps) will be subject to the throughput limitations of the PBX.

2.11 Frame Ground Connection

IMPORTANT

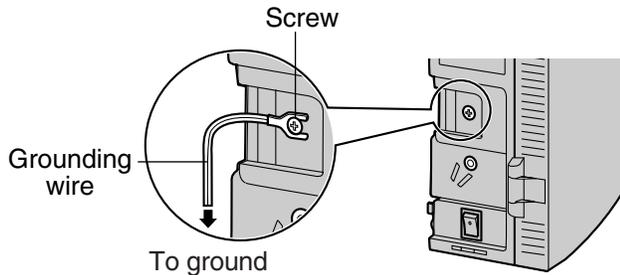

Connect the frame of the main unit to ground. The grounding plug of the AC cable provides some protection from external noise and lightning strikes, but it may not be enough to fully protect the unit. A permanent connection between ground and the ground terminal of the unit must be made.

1. Loosen the screw.
2. Insert an grounding wire (user-supplied).

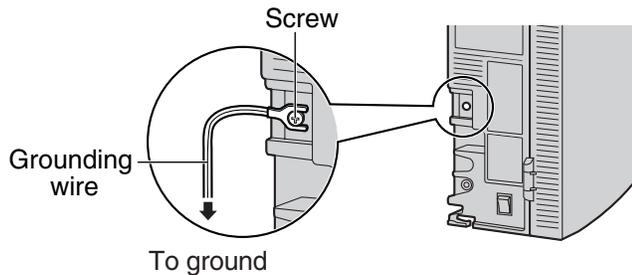

Note

- Green-and-yellow insulation is required, and the cross-sectional area of the conductor must be more than 0.75 mm² or 18 AWG.
3. Tighten the screw.
 4. Connect the grounding wire to ground.

KX-TVA50

KX-TVA200

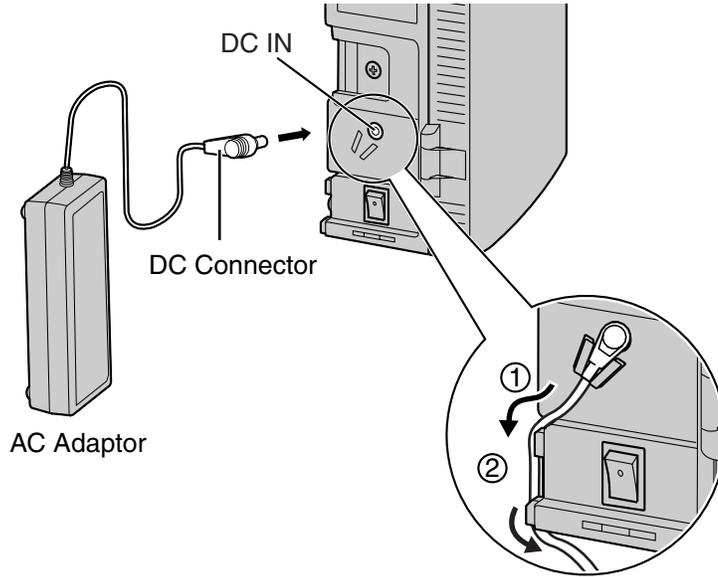

Note

- Be sure to comply with applicable local regulations (e.g., laws, guidelines).
- Proper connection to ground is very important to protect the unit from external noise, and can reduce the risk of electrocution in the event of a lightning strike.

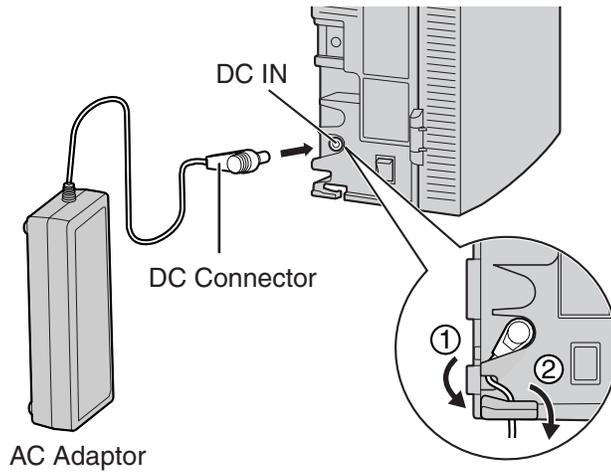

2.12 Connecting the AC Adaptor

1. Plug the DC connector of the AC adaptor into DC IN.

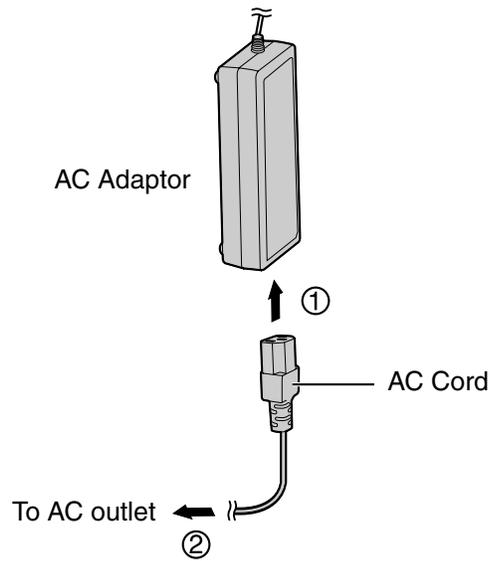

KX-TVA50

KX-TVA200

2. Confirm that the VPS power switch is in the "OFF" position, then plug the AC cord into the AC adaptor, then plug the other end into an AC outlet.

**IMPORTANT**

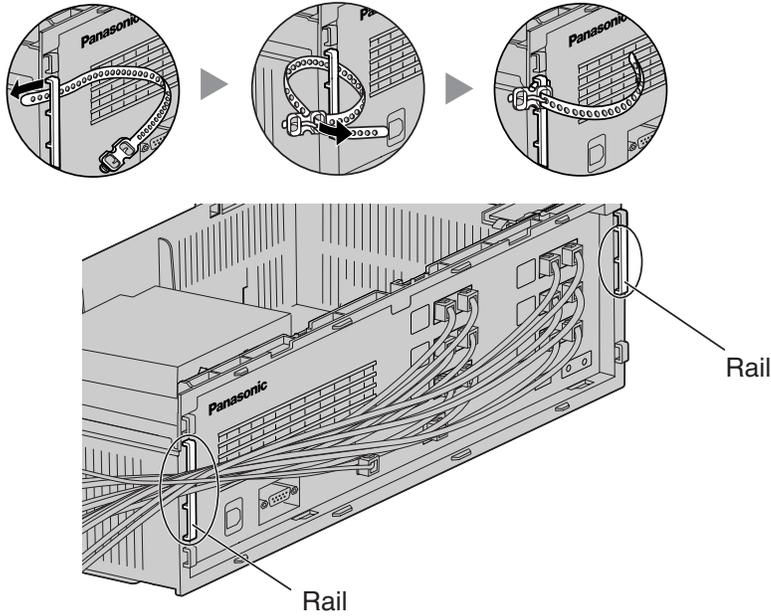

KX-TVA50: Use only the included Panasonic AC adaptor, part number PSLP1322.

KX-TVA200: Use only the included Panasonic AC adaptor, part number PSLP1244.

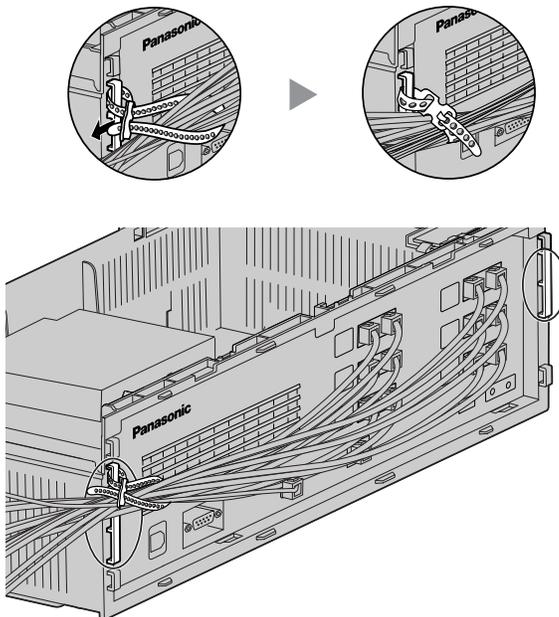

2.13 Securing the Cables

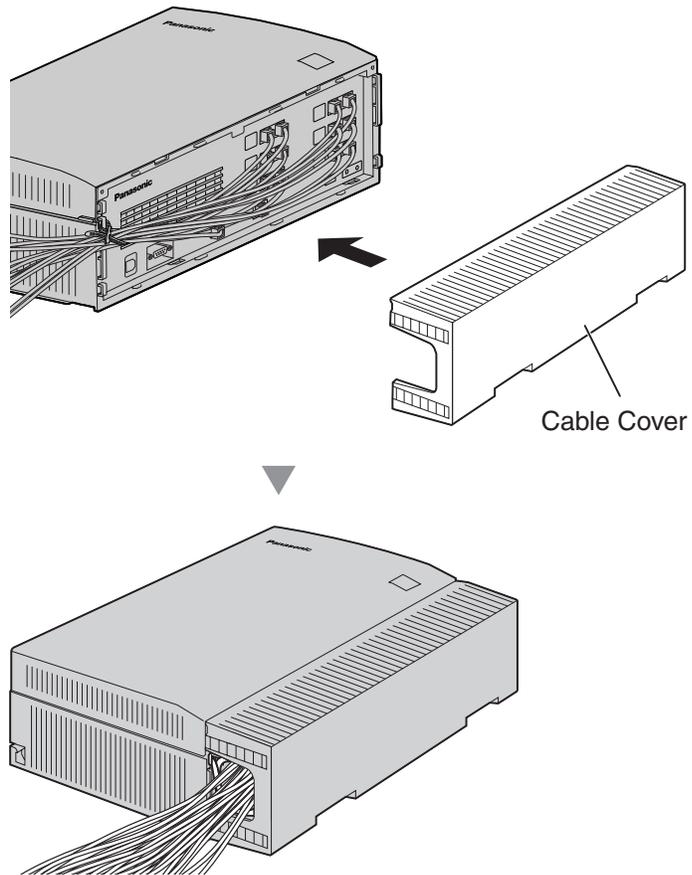

The model shown here is the KX-TVA200, however this procedure is the same for the KX-TVA50.

1. Attach the included strap to either of the 2 rails depending on your preference.

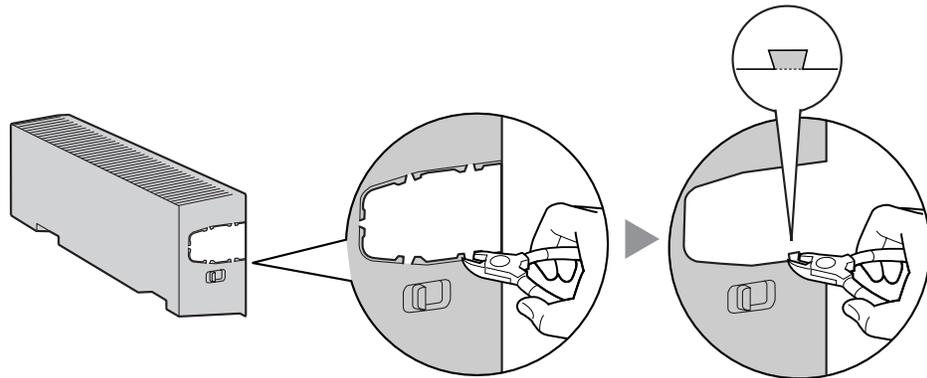

2. Bind the cables as shown.

3. Attach the cable cover (2.5 Opening/Closing the Covers).**Note**

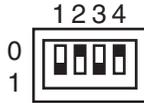

- For safety reasons, do not stretch, bend, or pinch the cables.
- If you prefer, you can cut the other side of the cable cover and run the cables through that opening. For safety reasons, smooth the cut edges.

2.14 Initializing the VPS During Installation

Before programming the VPS for the first time, perform the initialization procedure described below. All settings are reset to their default values. **Recorded messages are erased.** System Prompts (including customized prompts) are preserved.

1. Turn the power switch to the off position.
2. Set the Mode Switch to position 5 (see 2.3 Names and Locations).

3. Turn the power switch to the on position.
4. Confirm that the Run Indicator blinks 5 times.
 - This may take several minutes. The Alarm Indicator and Run Indicator will first blink intermittently before the Run Indicator blinks 5 times.
5. Turn the power switch off at the VPS.
6. Set the Mode Switch to position 0.

7. Turn the power switch back on at the VPS.

CAUTION

If the Mode Switch is not set to position 0, all programming will be lost when the power is switched off!

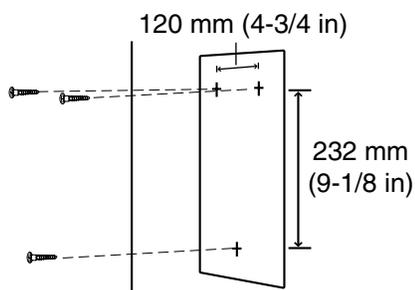

After initializing the VPS, continue with the installation procedure and/or begin programming the VPS.

2.15 Wall Mounting

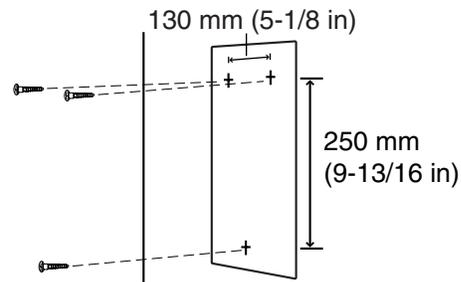

2.15.1 Wall Mounting the VPS

Mounting on a Wooden Wall

1. Place the appropriate wall mounting template (found on the last 2 pages of this manual) on the wall to mark the locations where the 3 screws need to be placed.

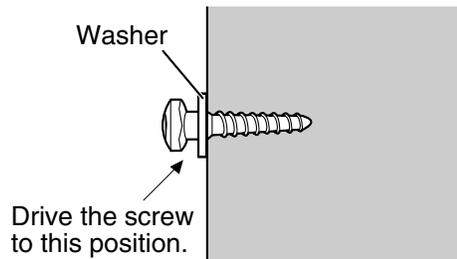

KX-TVA50

KX-TVA200

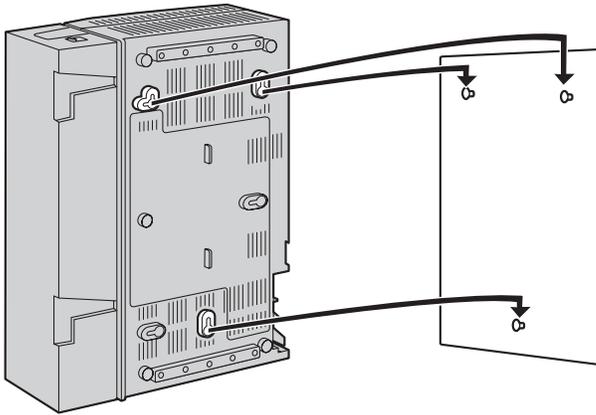

2. Install the screws and washers (included) in the wall.

Note

- Drive the screws into the wall until each screw head is the same distance from the wall.
- Install the screws perpendicular to the wall.

3. Mount the unit as shown.

Note

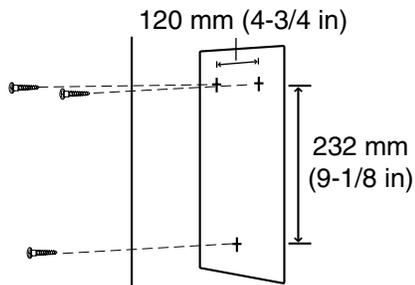

- Do not block the openings of the unit. Allow space of at least 20 cm (8 in) above and 10 cm (4 in) on the sides of the unit.
- Make sure that the wall behind the unit is flat and free of obstructions so that the openings on the back of the unit will not be blocked.
- Be careful not to drop the unit.

Mounting on a Concrete or Mortar Wall

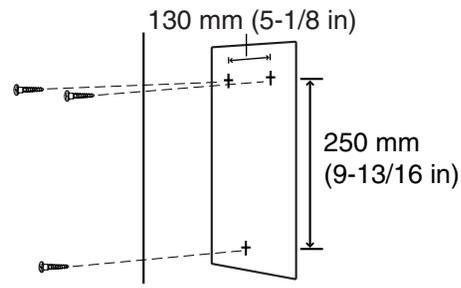

CAUTION

When driving the mounting screws into the wall, be careful to avoid touching any metalwork (metal/wire laths, etc.), conduits, or electrical cables buried in the wall.

1. Place the appropriate wall mounting template (found on the last 2 pages of this manual) on the wall to mark the locations where the 3 screws need to be placed.

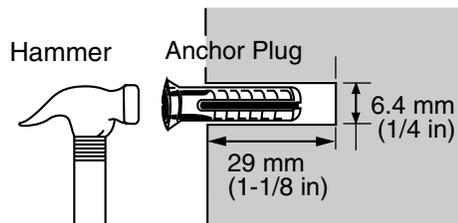

KX-TVA50

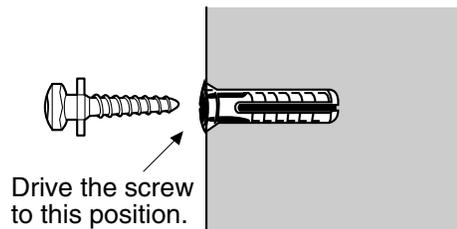

KX-TVA200

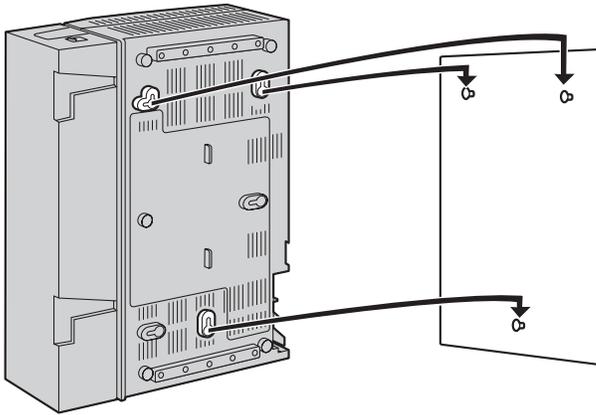

2. Install 3 anchor plugs (user-supplied) in the wall.

3. Install the screws (included) in the wall.

4. Mount the unit as shown.

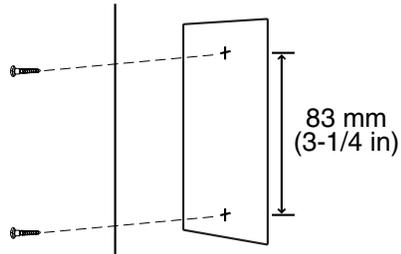

Note

- Do not block the openings of the unit. Allow space of at least 20 cm (8 in) above and 10 cm (4 in) on the sides of the unit.
- Make sure that the wall behind the unit is flat and free of obstructions so that the openings on the back of the unit will not be blocked.
- Be careful not to drop the unit.

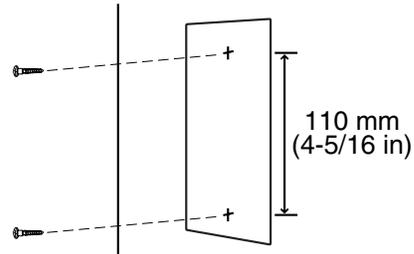

2.15.2 Wall Mounting the AC Adaptor

Mounting on Wooden Wall

1. Place the AC adaptor wall mounting template (found later in this section) on the wall to mark the locations where the 2 screws need to be placed.

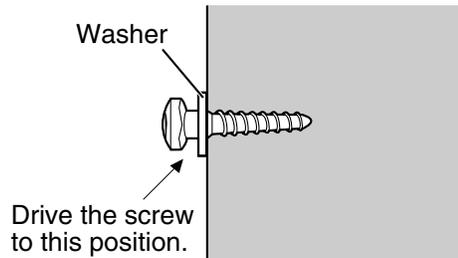

KX-TVA50

KX-TVA200

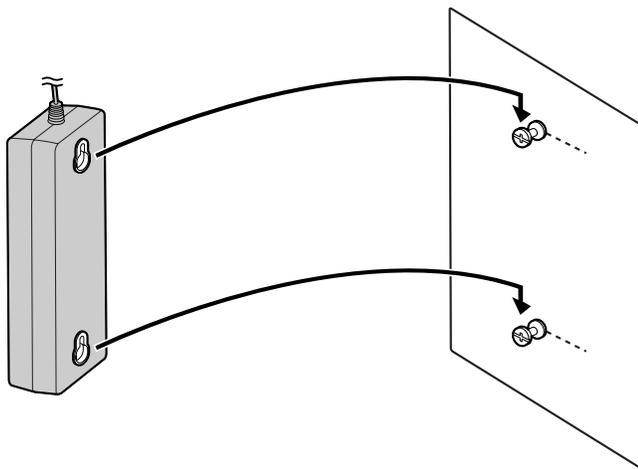

2. Install the screws and washers (included) in the wall.

Note

- Drive the screws into the wall until each screw head is the same distance from the wall.
- Install the screws perpendicular to the wall.

3. Mount the AC adaptor as shown.

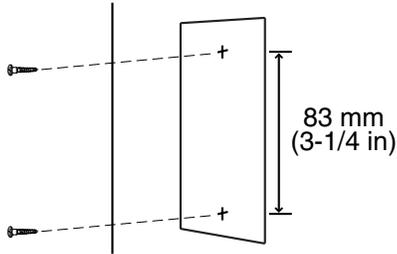

Mounting on Concrete or Mortar Wall

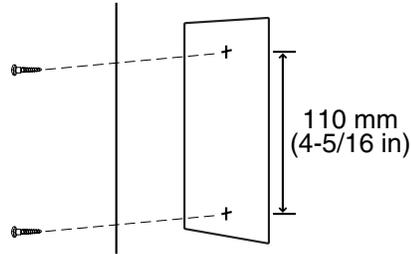

CAUTION

When driving the mounting screws into the wall, be careful to avoid touching any metalwork (metal/wire laths, etc.), conduits, or electrical cables buried in the wall.

1. Place the AC adaptor wall mounting template (found later in this section) on the wall to mark the locations where the 2 screws need to be placed.

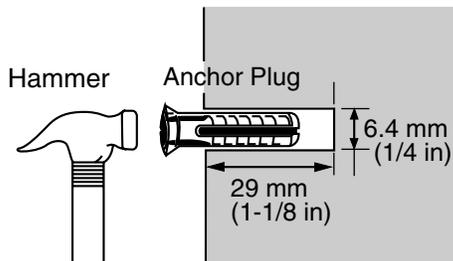

KX-TVA50

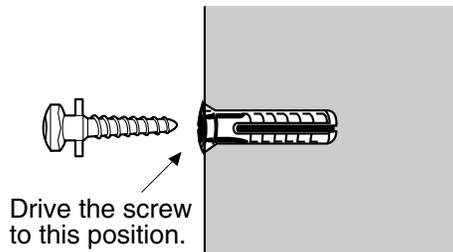

KX-TVA200

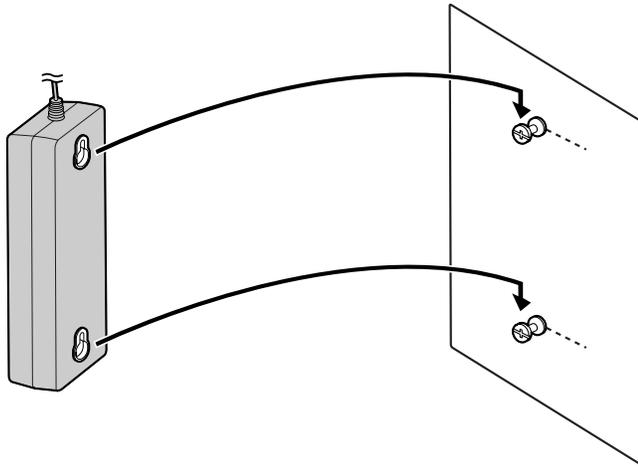

2. Install 2 anchor plugs (user-supplied) in the wall.

3. Install the screws (included) in the wall.

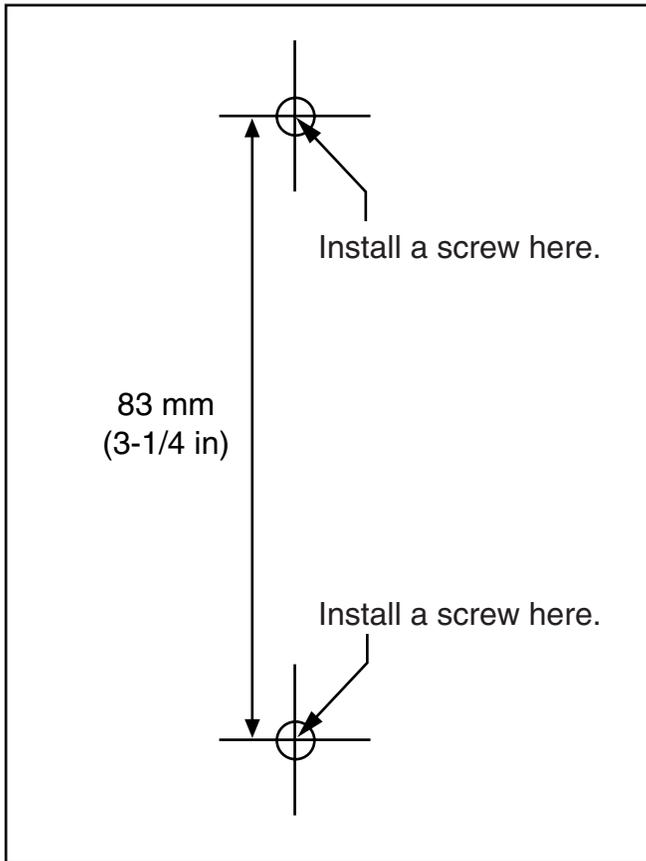

4. Mount the AC adaptor as shown.

Wall Mounting Template for AC Adaptor

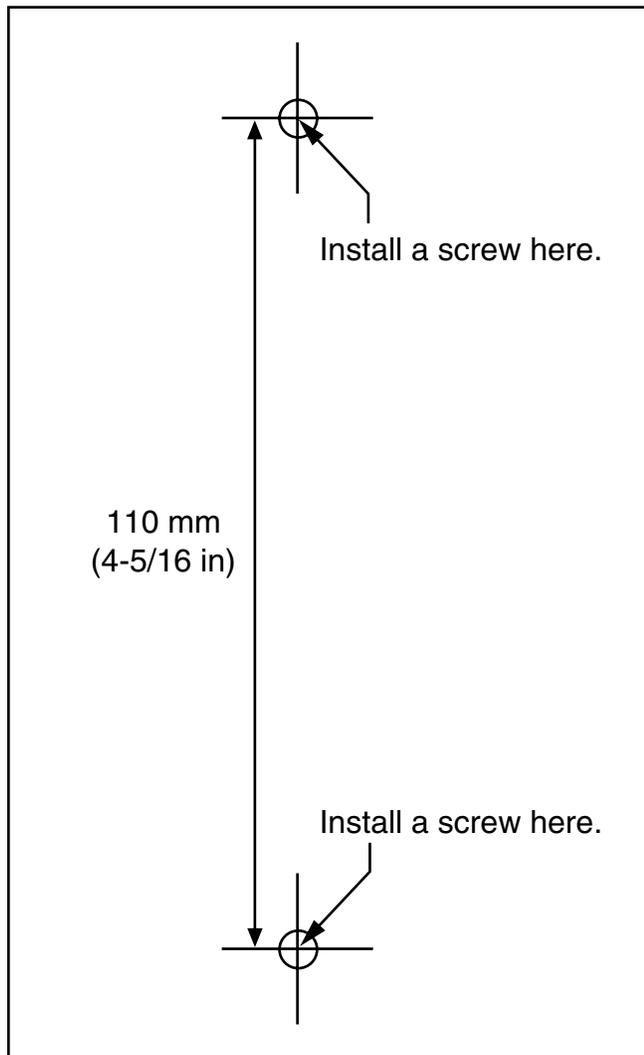

Please copy this page and use as a reference for wall mounting the KX-TVA50.

Note

- When you print out this page, the dimensions of the wall mounting template may deviate slightly from the measurements indicated in the template. Confirm that the markings on the printed page reflect the measurements indicated in the template.

Please copy this page and use as a reference for wall mounting the KX-TVA200.

Note

- When you print out this page, the dimensions of the wall mounting template may deviate slightly from the measurements indicated in the template. Confirm that the markings on the printed page reflect the measurements indicated in the template.

Section 3

Installing KX-TVA Maintenance Console

This section explains how to install KX-TVA Maintenance Console on a PC.

3.1 Overview

After wall mounting and connecting the VPS to the PBX, you can begin programming the VPS. This programming should be performed by the installer, using the KX-TVA Maintenance Console software. This software can be used to set system parameters, change system prompts, diagnose system functions, etc.

KX-TVA Maintenance Console supports connection to the VPS via USB, LAN, and modem. For details on how to connect the PC to the VPS, see 2.9 PBX Connections. For detailed information on all programming parameters available through KX-TVA Maintenance Console, refer to the Programming Manual or the software's on-line Help feature.

This section explains how to install the software on a PC. Normally you should install the software KX-TVA Maintenance Console on a PC that will be on-site with you during initial programming.

3.2 KX-TVA Maintenance Console Installation

System Requirements

Required Operating System

Microsoft® Windows® 98 SE, Windows 2000, Windows Me, or Windows XP

Minimum Hardware Requirements

CPU: 133 MHz Intel® Pentium® microprocessor

HDD: 300 MB of available hard disk space

RAM: 64 MB of available RAM (128 MB recommended)

Password Security

To maintain system security, a password is required to perform system programming. We recommend changing the default password the first time you access the VPS via KX-TVA Maintenance Console. The default password can be changed by running the Quick Setup utility (see 6.1.2 Quick Setup) or by selecting System Security → Administrator → Password.

Warning to the Administrator regarding the system password

1. To avoid unauthorized access to VPS settings, which could result in fraudulent dialing, do not disclose the password.
2. Please inform the customer of the importance of the password and the possible dangers if it becomes known to others.
3. Please change the password periodically.
4. To prevent unauthorized access, we strongly recommend selecting a long and random password.
5. If the system password is forgotten, you have to reset the VPS to its factory defaults and reprogram it.

Note

- A Programmer Code, if set, is required to start KX-TVA Maintenance Console. You can set or delete the Programmer Code by selecting Utility → Programmer Code. If no code is set, the KX-TVA Maintenance Console can be started and used, but a password is required to connect to the VPS and change VPS settings.

Installing KX-TVA Maintenance Console

1. Copy the KX-TVA Maintenance Console setup file to a local drive on the PC. (Its icon is shown here, on the left.)
2. Double-click the setup file to run the installer.
3. Follow the on-screen instructions provided by the installation wizard.
4. Click "**Finish**".
5. Click "**Yes**" when prompted to copy the USB drivers, specify a location, then click "**OK**".
6. Click "**OK**" after the drivers have been copied to the local drive.

Note

- To install or uninstall the software on a PC running Windows 2000 Professional or Windows XP Professional, you must be logged in as a user that is in either the "Administrators" or "Power Users" group.
- When the VPS is first connected to the PC via USB, a wizard should appear and ask you to select the appropriate USB driver. Browse for and select the KX-TVA USB driver, which is copied to the local drive during installation.

Updating other Panasonic Drivers

CAUTION

Installing the USB driver may prevent the USB driver for KX-TDA series or PC Console/Phone Software from functioning correctly. In this case, update the USB drivers as necessary from the following folders on the included CD-ROM:

KX-TDA Series: CD-ROM Drive:\TDA_USB Driver\TDA_USB Driver

PC Console/Phone Software: CD-ROM Drive:\TDA_USB Driver\T7601_USB Driver

Note

- Before installing or uninstalling the driver, be sure to close any open applications.

Windows 98SE

1. Connect the PC to the PBX with a USB cable.
The **Add New Hardware Wizard** will appear.
2. Click **Next**.
3. Select **Search for the best driver for your device. [Recommended]**, then click **Next**.
4. Select **Specify a location**, then click **Browse**.
5. Specify the folder containing the USB driver, **CD-ROM Drive:\USB driver\Win98**, then click **OK**.
6. Click **Next**.
7. Click **Next**.
8. Click **Finish**.

Note

- If a dialog box appears asking you to restart your PC, restart the PC.

Windows Me

1. Connect the PC to the PBX with a USB cable.
The **Add New Hardware Wizard** will appear.
2. Select **Specify the location of the driver [Advanced]**, then click **Next**.
3. Select **Search for the best driver for your device. [Recommended]**.
4. Select **Specify a location**, then click **Browse**.
5. Specify the folder containing the USB driver, **CD-ROM Drive:\USB driver\WinMe**, then click **OK**.
6. Click **Next**.
7. Click **Next**.
8. Click **Finish**.

Note

If a dialog box appears asking you to restart your PC, restart the PC.

Windows 2000

1. Connect the PC to the PBX with a USB cable.
The **Found New Hardware Wizard** will appear.
2. Click **Next**.
3. Select **Search for a suitable driver for my device. [Recommended]**, then click **Next**.
4. Select **Specify a location**, then click **Next**.
5. Click **Browse**, and specify the folder containing the USB driver, **CD-ROM Drive:\USB driver\Win2000**, then click **Open**.
6. Click **OK**.
7. Click **Next**.
8. Click **Finish**.

Windows XP

1. Connect the PC to the PBX with a USB cable.
The **Found New Hardware Wizard** will appear.
2. Select **Install from a list or specific location [Advanced]**, then click **Next**.
3. Select **Search for the best driver in these locations**.
4. Select **Include this location in the search:**, then click **Browse**.
5. Specify the folder containing the USB driver, **CD-ROM Drive:\USB driver\WinXP**, then click **OK**.
6. Click **Next**.
7. Click **Continue Anyway**.
8. Click **Finish**.

3.3 Starting KX-TVA Maintenance Console

The instructions listed below explain how to start KX-TVA Maintenance Console. These instructions are for when connecting to the VPS via USB.

Note

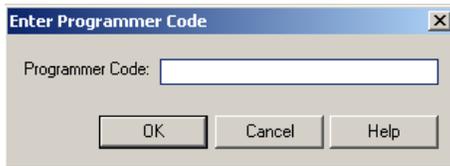

- The screenshots shown here are for reference only, and may differ from the screens displayed on your PC.

1. Click the **KX-TVA Maintenance Console** shortcut icon. Its icon is shown here, on the left.

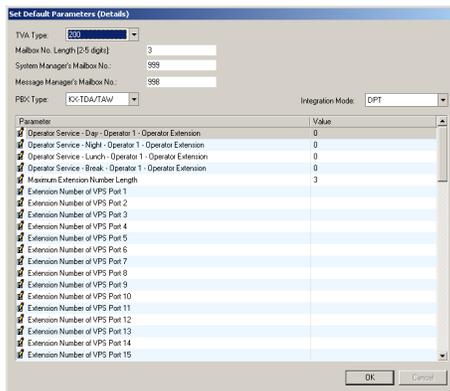

2. Select the appropriate VPS model.

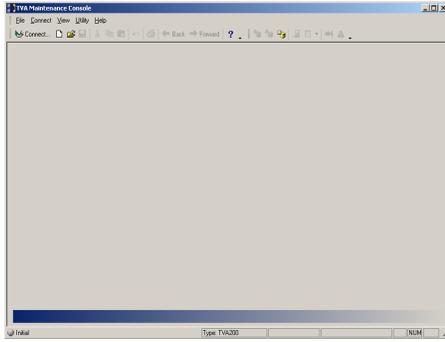

3. The Enter Programmer Code dialog box is displayed. Enter the programmer code (default: 1234) and click **OK**.

Note

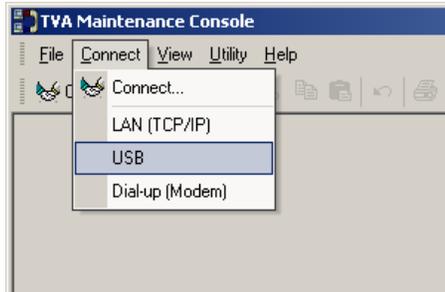

- The programmer code is required to use the KX-TVA Maintenance Console. The System Administrator can change the programmer code (see 1.8.9 Utility—Programmer Code in the Programming Manual).

4. The Set Default Parameters window is displayed the first you start KX-TVA Maintenance Console. Select the TVA Type, PBX Type, and Integration Mode. Change the default parameters listed in the window if necessary, then click **OK**.

5. The main window is displayed.

6. Click **Connect** → **USB** from the menu bar, or click **Connect** on the shortcut bar, select **USB** in the **Connection Mode** dialog box and click **Next**.

Note

- To connect to the VPS via USB, the KX-TVA USB driver must be installed on the PC, as explained above in "Installing KX-TVA Maintenance Console".

7. Select the VPS as the desired USB device, enter the administrator password (default: 1234), then click **Next**.

Note

- The administrator password is required to access the VPS. The System Administrator can change the password (see Password in 2.8.1 Administrator in the Programming Manual).

8. Click **Finish** when the message **Connected!** is displayed.

9. You may now begin programming the VPS. To choose the area you would like to begin programming, click the desired icon in the Shortcuts menu.

Note

- To connect to the VPS via LAN, first connect to the VPS via USB and set the appropriate LAN settings. Refer to 1.8.11 Utility—LAN Settings in the Programming Manual.
- To connect to the VPS via modem, refer to 1.4.3 Connect—Modem (optional) in the Programming Manual.
- If programming the VPS for the first time, the Quick Setup utility can help you program essential settings quickly and easily. See 6.1.2 Quick Setup for more information.
- When KX-TVA Maintenance Console is started, it enters Initial mode. From here, you can choose to enter Batch mode or Interactive mode to program the VPS.

Batch mode allows you to create new system data files and make modifications to system data files saved on your PC without being connected to the VPS. Later, when you connect to the VPS, the system data stored in the PC can be uploaded to the VPS. To enter Batch mode, select an option from the File menu.

Interactive mode allows you to directly modify the system data and settings saved in the VPS's memory from a PC that is connected to the VPS. This mode displays the system data that is currently being used by the VPS. Data can be modified and results displayed in real time. To enter Interactive mode, select an option from the Connect menu.

- Software features, design, and system requirements are subject to change.

Section 4

PBX Programming for APT/DPT Integration

This section explains how to configure compatible Panasonic PBXs to use APT/DPT Integration with the VPS.

4.1 Guidelines for APT/DPT Integration

4.1.1 What is APT/DPT Integration?

In order for the VPS to function, it must be integrated with the PBX it serves. The type of integration that is used determines how voice (caller messages, VPS prompts, etc.) and data (extension status, button presses, etc.) are sent between the VPS and the PBX.

Unlike Inband Integration, when the VPS and PBX use APT or DPT Integration, information is sent between the PBX and VPS digitally. This allows the VPS to respond quickly and efficiently. Additionally, configuring a Panasonic PBX for APT or DPT Integration is generally much easier than configuring a PBX for Inband Integration.

4.1.2 When to Use APT/DPT Integration

The type of PBX and/or the type of extension cards installed in the PBX will determine whether APT or DPT Integration can be used. See 1.1.7 Compatible PBXs for more information.

4.1.3 APT/DPT Integration Features

During APT/DPT Integration, the PBX sends information to the VPS which lets the VPS know from where and why a call is sent to the VPS, and identifies the extension or outside caller that is calling. This communication allows features that are only available with APT/DPT Integration, described below:

Feature	Description	Compatible Integration Type	
		APT	DPT
Auto Configuration	The VPS knows what extension names/ numbers exist on the PBX and creates mailboxes for each extension automatically. Also sets the VPS clock with data from the PBX clock.	✓	✓
Automatic Login*¹	Subscribers can access their mailboxes without dialing their mailbox numbers.	✓	✓
Caller ID Call Routing*²	The VPS automatically sends calls from preprogrammed Caller ID numbers to the specified extension, mailbox, or Custom Service.	✓	✓
Caller ID Screening	When the VPS transfers a call to an extension, the VPS announces the prerecorded name of the caller, allowing the extension user to know who is calling.	✓	✓

Feature	Description	Compatible Integration Type	
		APT	DPT
Caller Name Announcement (System/ Personal)*²	The VPS announces the prerecorded caller name when: (1) extension users listen to messages from assigned numbers left in their mailboxes, (2) the VPS transfers calls from assigned numbers to the users, and (3) the VPS pages the users by intercom. If the same Caller ID number is programmed for both System and Personal Caller Name Announcements, the VPS will use the personal caller name.	✓	✓
Caller Name Announcement Over Paging	After receiving Caller ID information from the telephone company, the VPS announces the caller's name and the trunk (CO line) number.	✓	✓
Intercom Paging*²	Callers can page subscribers through built-in speakers and external paging equipment. If a Caller ID caller's name has been previously recorded for the Caller Name Announcement Feature, the caller's name will be announced at the end of the page.	✓	✓
Live Call Screening	Allows the subscriber to monitor incoming calls as messages are being recorded. The subscriber has the option of answering calls while monitoring or allowing the message to be recorded without interruption.	✓	✓
One-touch Two-way Transfer	An extension user can record his conversation in another person's mailbox by pressing a preprogrammed flexible button. Available only with KX-TDA and KX-TAW series PBXs.	—	✓
Personal Greeting for Caller ID*²	Each subscriber can record up to 4 personal greeting messages for special callers.	✓	✓
Service Mode (PBX Control Mode)	Allows the System Administrator or the System Manager to change the call handling method that is programmed for each Time Group.	✓	✓
Toll Saver*¹	Subscribers can call the VPS from preprogrammed outside telephone numbers or by using preprogrammed DID numbers and be connected to their mailboxes directly. The number of rings they hear will let them know if they have new messages or not.	✓	✓

Feature	Description	Compatible Integration Type	
		APT	DPT
Trunk Service (Universal Port)	Each PBX trunk (CO line) group can be assigned one of 4 incoming call services: Voice Mail Service, Automated Attendant Service, Interview Service, and Custom Service.	✓	✓
Two-way Recording	Subscribers can record conversations into their own mailboxes by pressing a preprogrammed flexible button.	✓	✓
Two-way Transfer	Subscribers can record conversations into another person's mailbox by pressing a preprogrammed flexible button. and dialing an extension number.	✓	✓
Caller ID Callback	If Caller ID information was received for a call, the subscriber can easily call back the caller while listening to the message the caller recorded.	✓	✓
DID Call Routing*¹	The VPS automatically sends calls from preprogrammed DID numbers to the specified extension, mailbox, or Custom Service.	—	✓
Remote Call Forwarding Set	The subscribers and the Message Manager can program their extensions from a remote location to forward various types of calls to a desired extension or an outside telephone.	—	✓
Time Synchronization	Whenever the PBX sets a new date and time or when DPT Integration is established, the data is automatically registered in the VPS.	—	✓
Timed Reminder Setting*³	Allows subscribers to set the Timed Reminder feature of the PBX using voice prompts.	—	✓
VM Menu*⁴	Allows subscribers to access subscriber services by navigating through menus shown on their Digital Proprietary Telephones (DPTs).	—	✓

*1 DID Call Routing and Toll Saver using DID numbers are only available when the VPS is connected to the following PBXs with DPT Integration.

- KX-TD500: Software production date code 040702 or later.
- KX-TDA series (except KX-TDA50), MPR version 1.1 or higher

*2 When an incoming trunk (CO line) call reaches the VPS via the PBX, the VPS will wait about 5 s before answering the call in order to properly receive the Caller ID information from the PBX. This waiting time is determined by the "Waiting Time for Receiving Caller ID" setting (see 2.5.4 Parameters in the Programming Manual).

- *3 Timed Reminder Setting is only available when the VPS is connected to a KX-TDA series PBX (MPR version 2.0 or higher) or KX-TAW series PBX.
- *4 VM Menu is only available when the VPS is connected to a KX-TDA series PBX (MPR version 2.0 or higher).

4.2 KX-TDA and KX-TAW Series PBX Programming for DPT Integration

The screen shots shown in this section are for the KX-TDA200. Programming procedures and availability may vary by PBX model, software version, etc. Refer to the documentation included with the PBX or consult your dealer for more information.

A group of DPT ports of the PBX connected to a VPS with DPT Integration is called a "VM (DPT) Group". Each VM (DPT) Group consists of a maximum of 12 ports (24 channels) of the VPS. Up to 2 VM (DPT) Groups can be assigned for the KX-TDA100/TDA200; 2 VPSs can be connected to a KX-TDA100/200.

Only one VM (DPT) Group can be assigned for the KX-TDA50 and KX-TAW series; in other words, only one VPS can be connected to a KX-TDA50 and KX-TAW series.

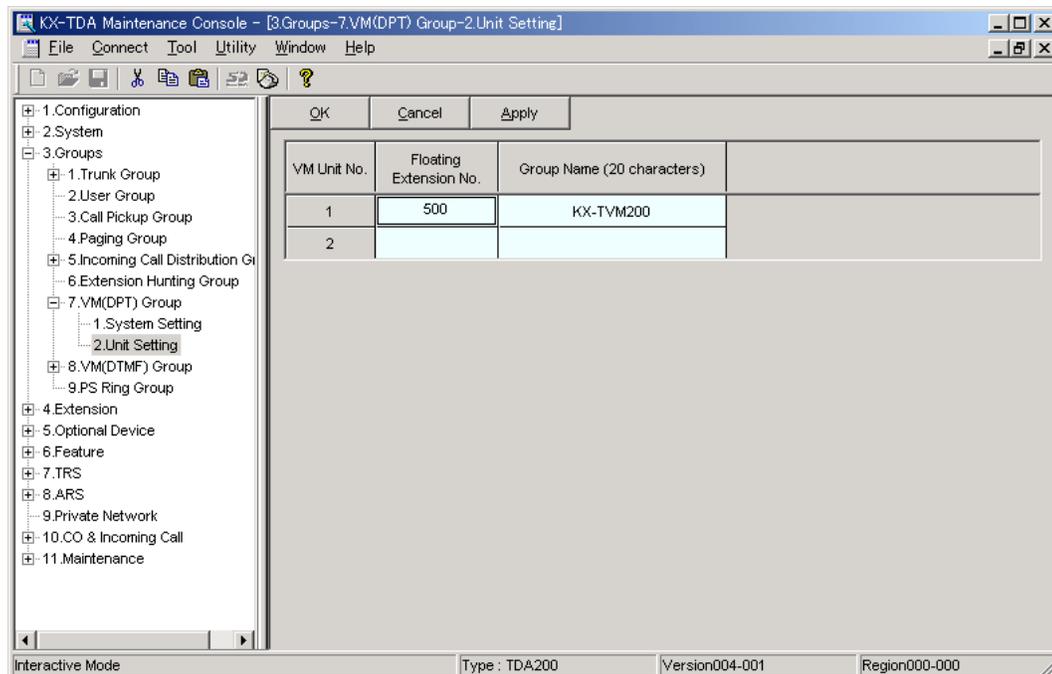

Through PBX system programming, you must assign the VM (DPT) Group and the VM (DPT) extension ports that will use DPT Integration.

1. Assignment of VM (DPT) Group

- a) Go to the "Groups-VM (DPT) Group-Unit Setting" screen.
- b) Assign a floating extension number to the VPS (VM Unit number).
- c) Click "Apply" to save the changed data.

Note

- For the KX-TDA100/KX-TDA200, you can use a maximum of 2 VM (DPT) groups (Unit No.1 and Unit No.2). All of the extension ports in a VM (DPT) group should be connected to the same DHLC card or DLC card.

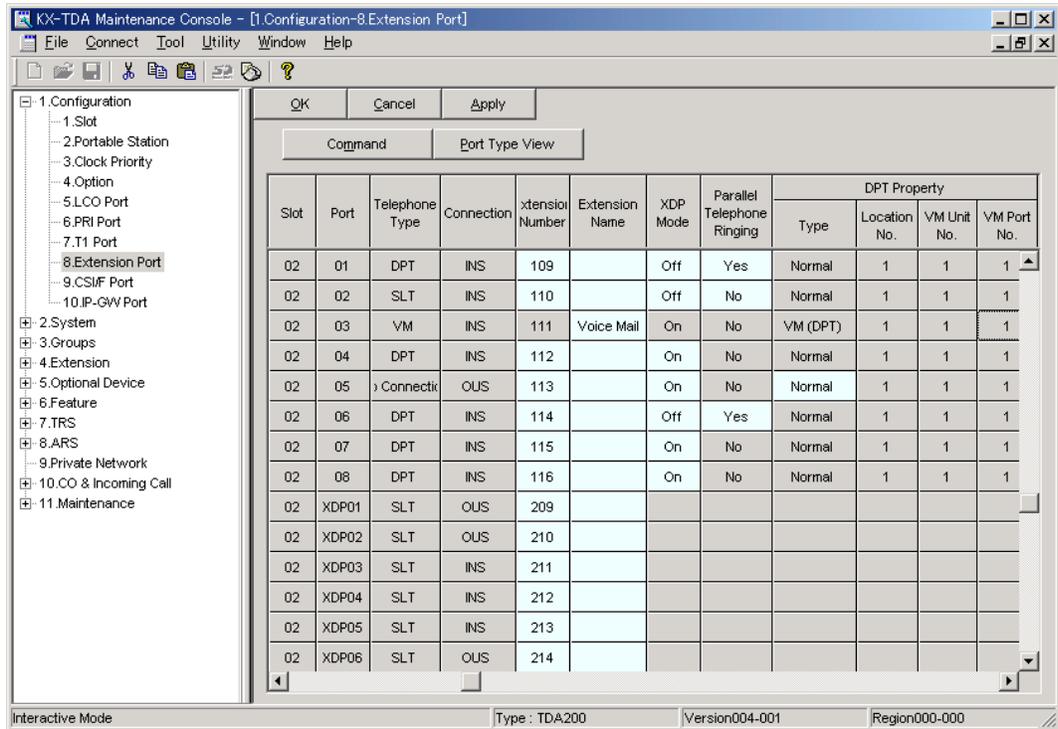

Note

- The screen shot above is an example of the KX-TDA200.

2. Assignment of VM (DPT) extension ports

- a) Go to the "Configuration-Extension Port" screen. Follow the procedure below for the extension port which you want to assign as a VM port.
- b) Set the port's "Connection" to "OUS".
- c) Select the attribute of "DPT Property-Type" to "VM (DPT)".
- d) Assign "DPT Property-VM Unit No." and "DPT Property-VM Port No.". Incoming calls will hunt starting at the lowest VM Port number.
- e) Click "Apply" to save the changed data.
- f) Set the port's "Connection" to "INS".

Note

- The screen shot above is an example of the KX-TDA200.

3. Settings for the trunk (CO line) features

Select the appropriate trunk (CO line) feature settings depending on how your customer plans to use the VPS.

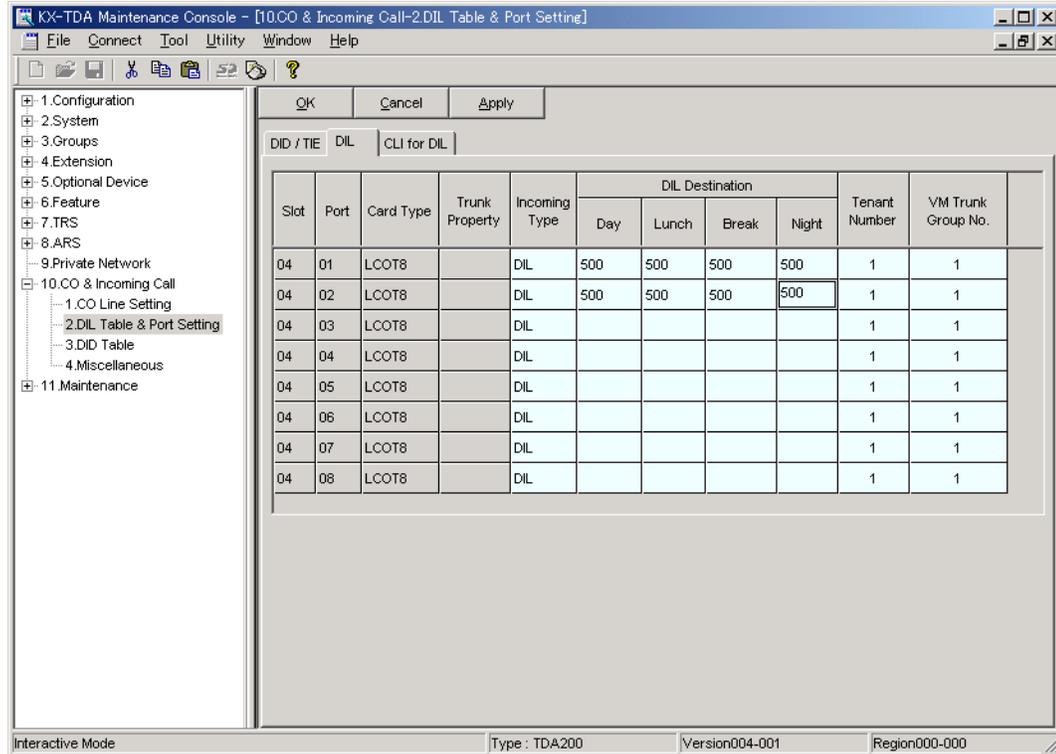

- The VPS answers all incoming trunk (CO line) calls promptly.
Go to [Example Settings (1)].
- The VPS answers when the operator does not take the call after a specified time.
Go to [Example Settings (2)].
- The VPS answers when an Incoming Call Distribution (ICD) group does not take the call after a specified time.
Go to [Example Settings (3)].

[Example Settings (1)]

Program the PBX so that all trunk (CO line) calls are directed to the VPS (DIL feature).

- 1) Go to the "CO & Incoming Call-DIL Table & Port Setting" screen.
- 2) Assign "DIL Destination Day/Night/Lunch/Break" for each trunk (CO line) to a floating extension number (VPS Port).
- 3) Click "Apply" to save the changed data.

Calls received on the assigned trunks (CO lines) will be directed to the VPS. The VPS will answer those calls using the service (AA, VM, Custom Service, etc.) assigned to each VPS port through VPS programming.

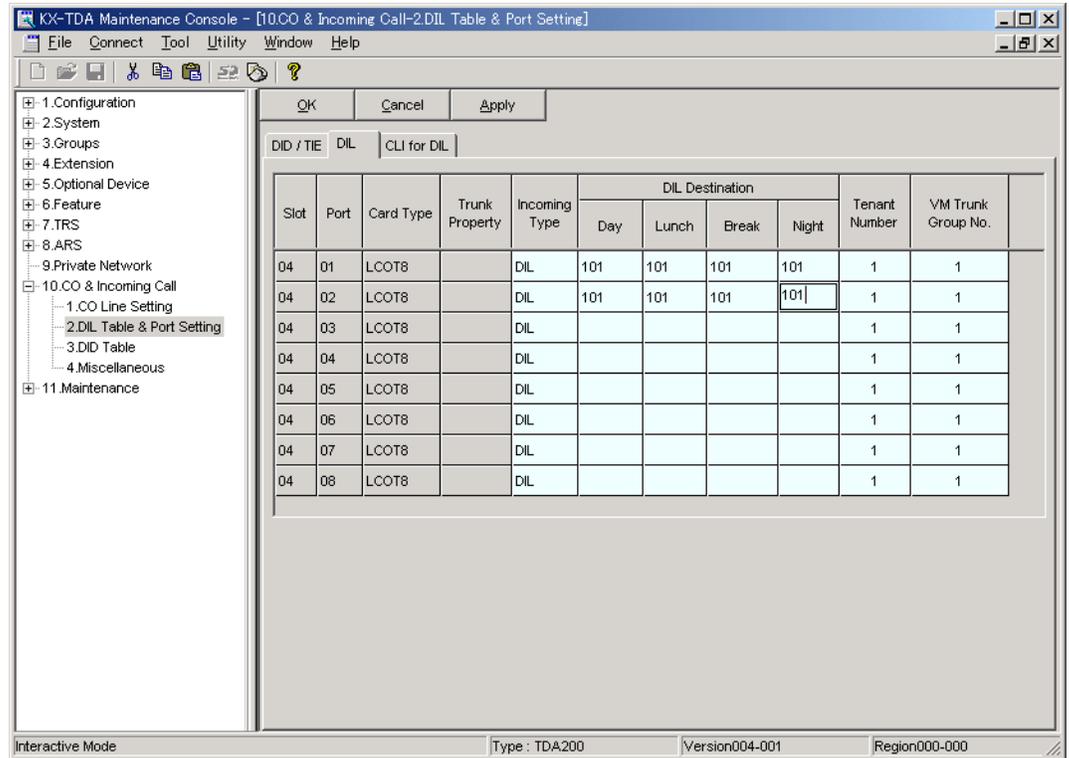

Note

- The above screen output appears only when all the trunk (CO line) cards mounted on your PBX are LCOT8 cards.

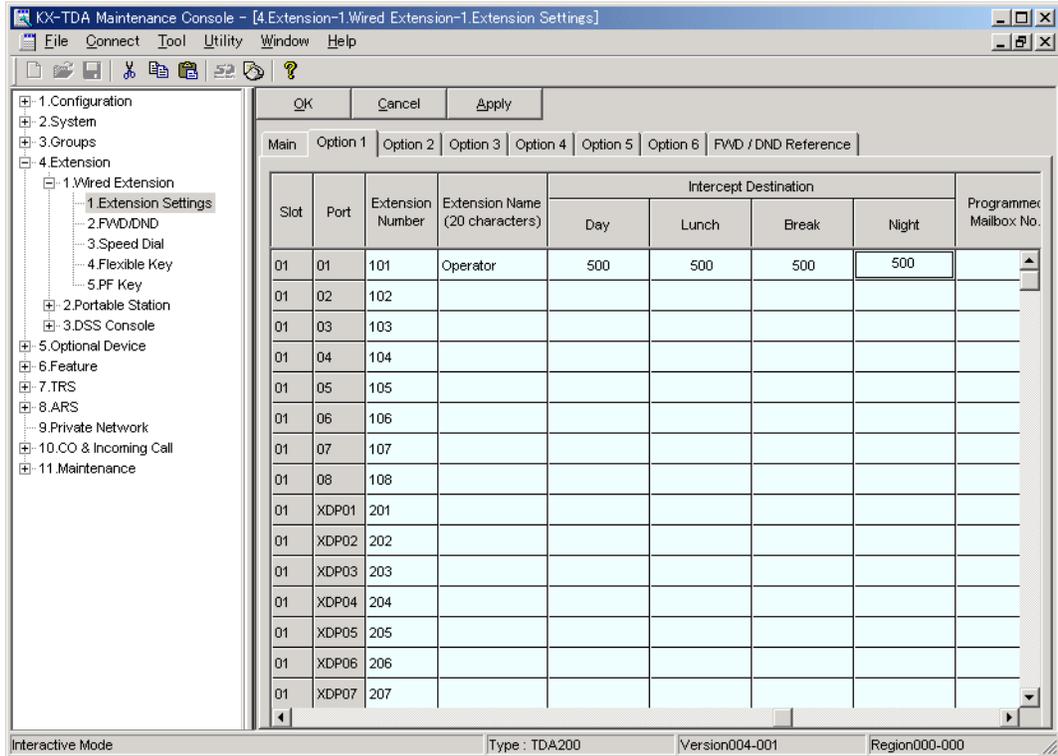

[Example Settings (2)]

Program the PBX to direct incoming trunk (CO line) calls to an operator, and to then direct those calls to the VPS when the operator does not answer.

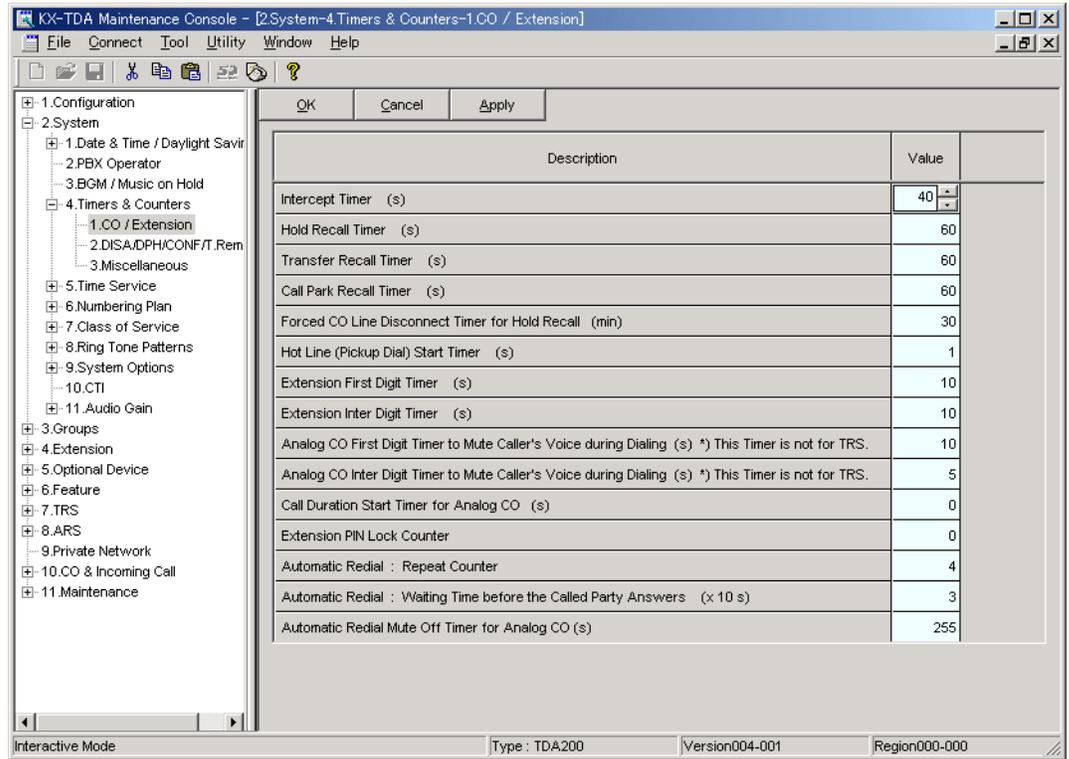

- a) Program the PBX so that incoming trunk (CO line) calls are directed to an operator (DIL feature).
 - 1) Go to the "CO & Incoming Call-DIL Table & Port Setting" screen.
 - 2) Assign "DIL Destination Day/Night/Lunch/Break" for each trunk (CO line) to a specific extension number (operator extension).
 - 3) Click "Apply" to save the changed data.

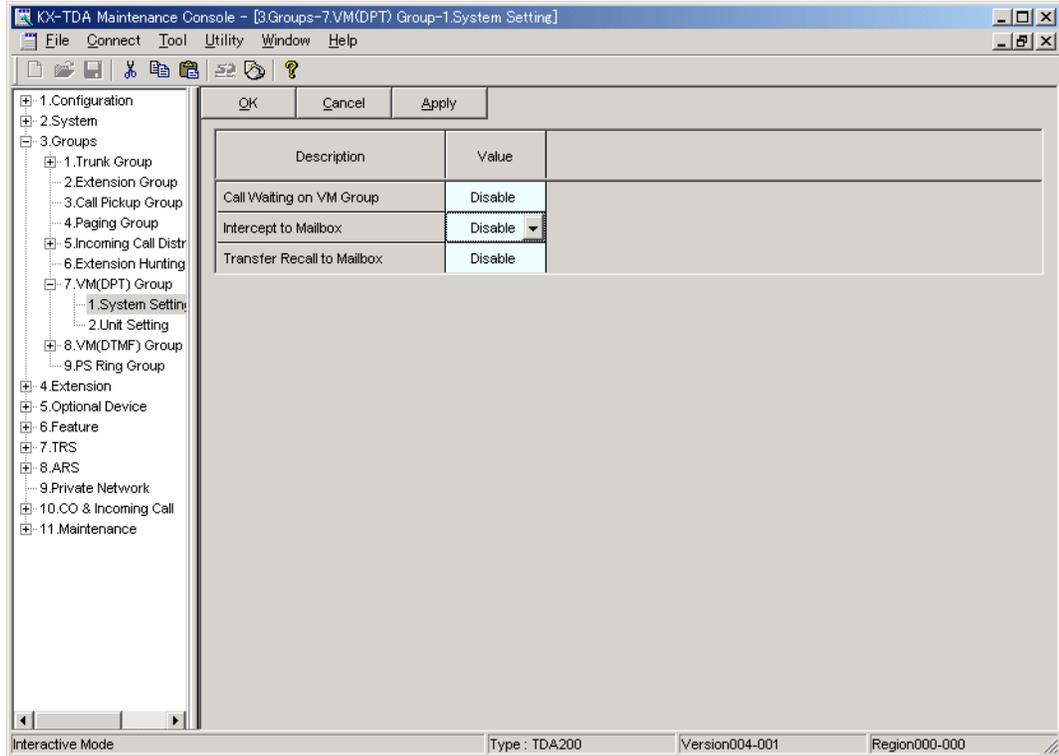

- b) Program the PBX so that unanswered calls to the operator are redirected to the VPS (Intercept Routing No Answer feature).
 - 1) Go to the "Extension-Wired Extension-Extension Settings" screen.
 - 2) Assign "Intercept Destination Day/Night/Lunch/Break" for the operator's extension to a floating extension number (VPS Port).
 - 3) Click "Apply" to save the changed data.

- c) Set the amount of time before a call is considered "unanswered" and therefore forwarded to the VPS (Intercept Routing No Answer timer).
- 1) Go to the "System-Timers & Counters-CO / Extension" screen.
 - 2) Assign "Intercept Timer" parameter.
 - 3) Click "Apply" to save the changed data.

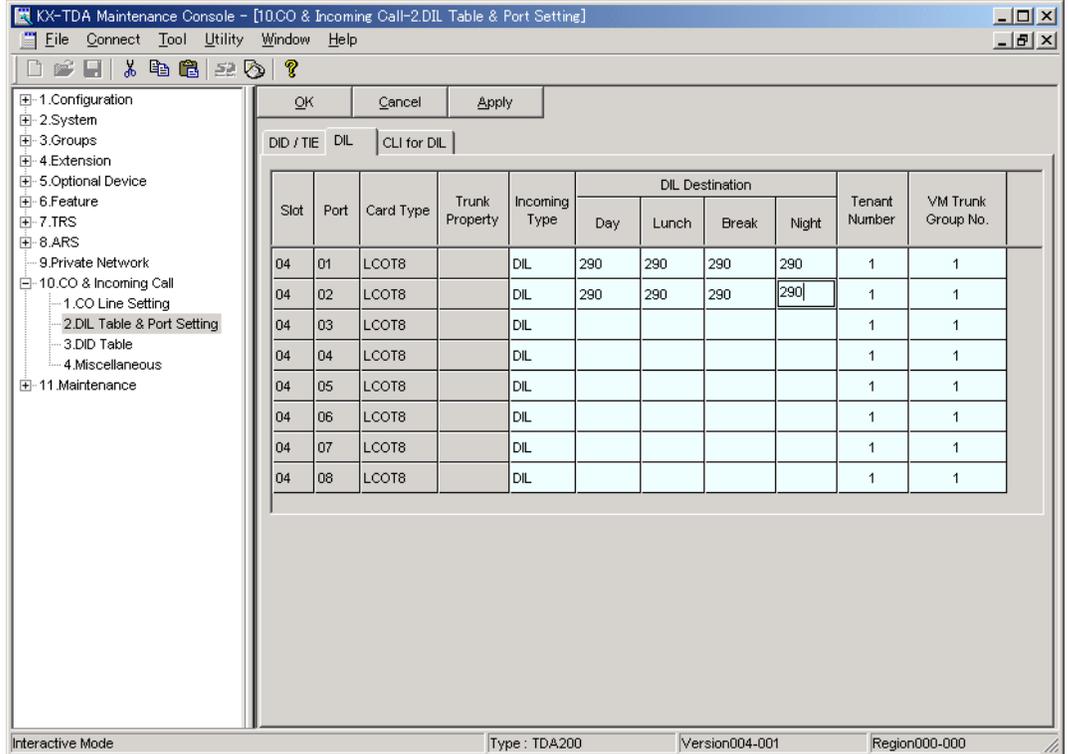

- d) Program the PBX so that it will direct intercepted calls to the VPS.
- 1) Go to the "Groups-VM(DPT) Group-System Setting" screen.
 - 2) Select "Disable" as the parameter for "Intercept to Mailbox".
 - 3) Click "Apply" to save the changed data.

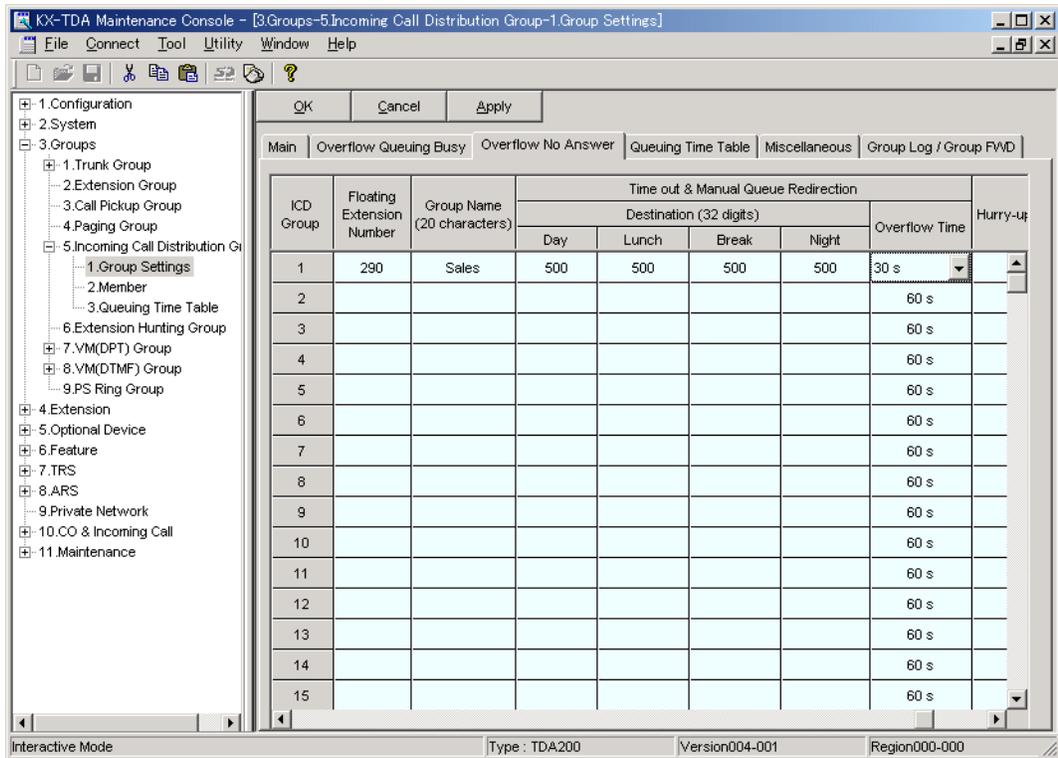

[Example Settings (3)]

Program the PBX to direct incoming trunk (CO line) calls to an Incoming Call Distribution (ICD) group, and to then direct those calls to the VPS when they are not answered.

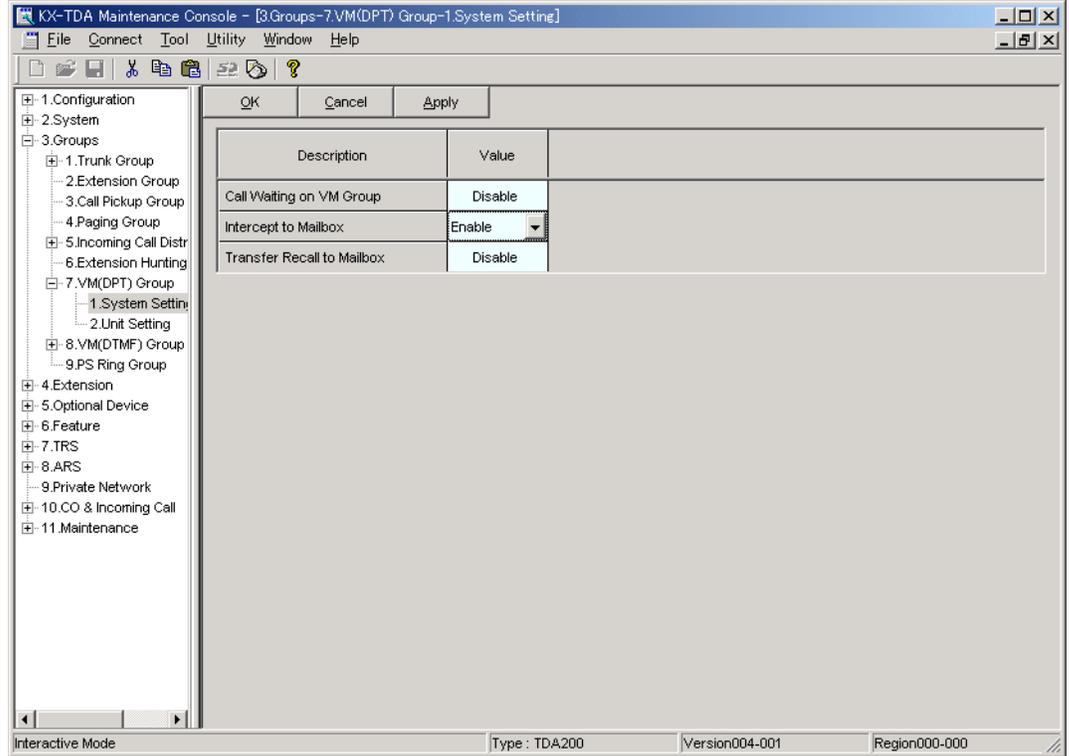

- a) Program the PBX so that incoming trunk (CO line) calls are directed to an ICD group (DIL feature).
 - 1) Go to the "CO & Incoming Call-DIL Table & Port Setting" screen.
 - 2) Assign "DIL Destination Day/Night/Lunch/Break" for each trunk (CO line) to a specific extension number (floating extension number of the ICD group).
 - 3) Click "Apply" to save the changed data.

- b) Program the PBX so that unanswered calls to the ICD group are redirected to the VPS (ICD Group Overflow feature).
- 1) Go to the "Groups-Incoming Call Distribution Group-Group Settings" screen.
 - 2) Assign "Time out & Manual Queue Redirection-Destination" for the ICD group to a floating extension number (VPS Port).
 - 3) Assign "Overflow Time" parameter.
 - 4) Click "Apply" to save the changed data.

- c) Program the PBX so that it will direct overflowed calls to the ICD group's mailbox.
- 1) Go to the "Groups-VM(DPT) Group-System Setting" screen.
 - 2) Select "Enable" as the parameter for "Intercept to Mailbox".
 - 3) Click "Apply" to save the changed data.

4. Make sure all installation and line connections have been done as described in Section 2 Installation.
5. Connect the jack assigned in Step 2 to the VPS.
6. Complete the PBX-VPS connection by following from step 1 of 4.7 Completing the PBX-VPS Connection.

Installing Prompt Data for the VM Menu Feature

KX-TDA series PBXs (MPR version 2.0 or higher) can use the VM Menu feature, however, VM Menu prompt data must first be installed in the PBX using the following procedure.

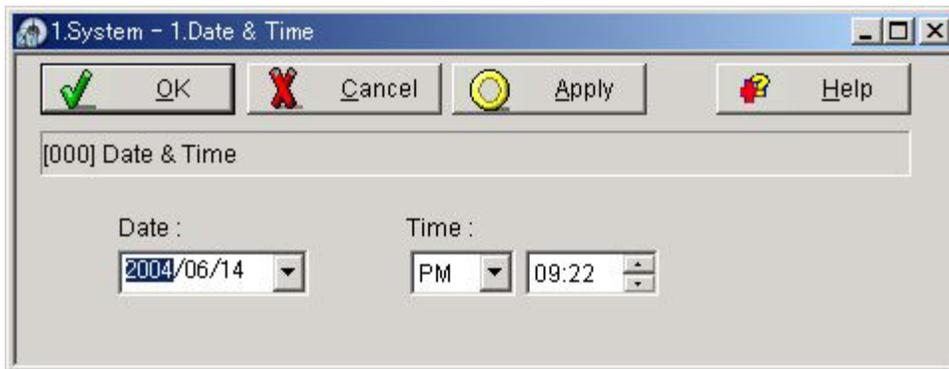

1. Shutdown the PBX, eject the SD memory card, and insert the SD memory card into your PC.
2. Insert the CD-ROM included with the VPS into your PC's CD-ROM drive.
3. Find the following folder: CD-ROM Drive:\VM_prompt\VM_Menu\.
4. Copy the 5 files (DVMLNG1 to 5) in this folder to the following folder on the SD memory card: SD Memory Card:\PRIVATE\MEIGROUP\PCC\PBX.
5. Eject the SD memory card, insert it into the PBX, and start the PBX.

4.3 KX-TA824 PBX Programming for APT Integration

The instructions in this section are for programming a KX-TA824 via the Operating and Maintenance Tool. To program a KX-TA824 using the Manager Extension, follow the instructions for KX-TA series PBX programming by referring to 4.6 KX-TA Series PBX Programming for APT Integration.

Note

- Software version 1.0.44 or later is required for APT Integration. Consult your dealer for more information.
1. Go to the "1.System-1.Date & Time" screen. Set the date and time. Click "Apply" to save the changed data.

2. Go to the "1.System-2.Main" screen. Under "Voice Mail", select "APT Integration", then select each extension jack that is connected to the VPS. Click "Apply" to save the changed data.

1. System - 2. Main

OK Cancel Apply Help

System Password : 1234

Operator : Jack 01

Time

Time Display (12 h/24 h) : 12 h

Automatic Time Adjustment

Music on Hold : Tone

Voice Mail

Disable

DTMF Integration

VM Port :

Jack 07

Jack 08

Jack 15

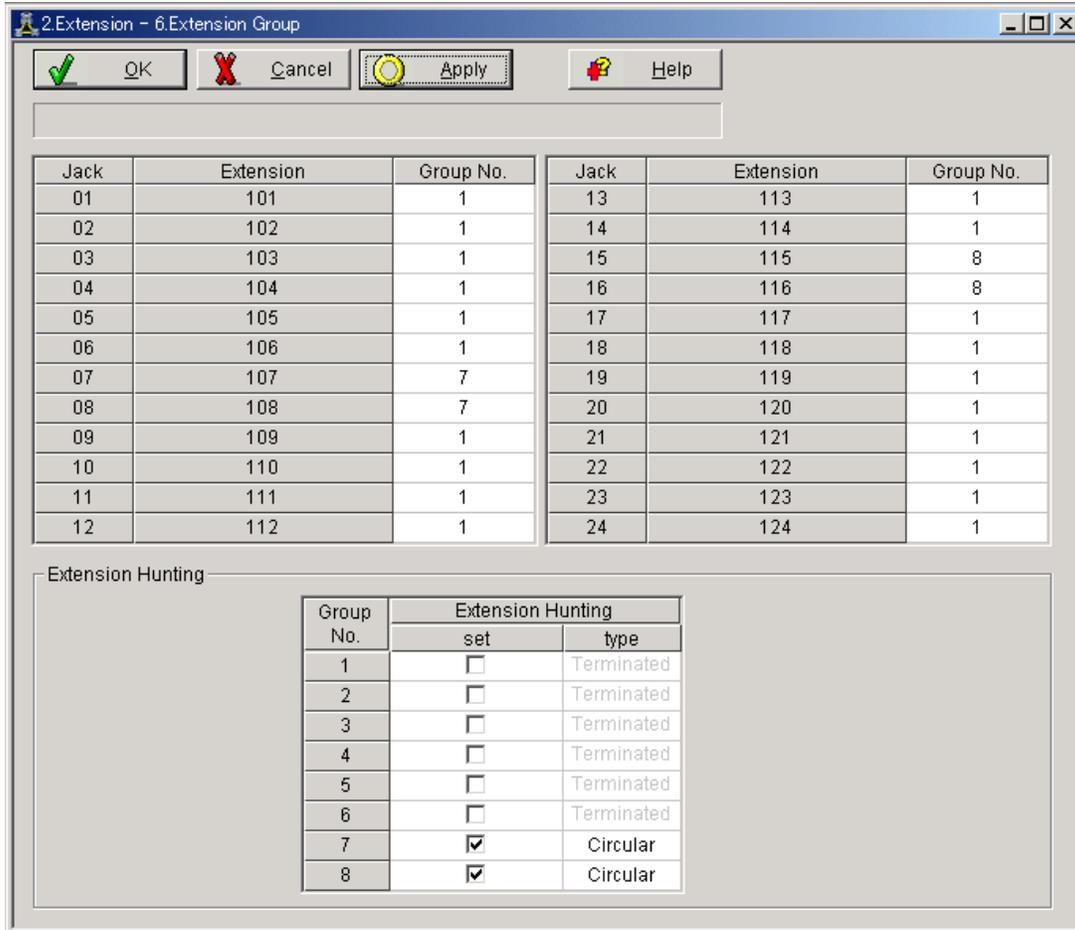

Jack 16

APT Integration

VM1 APT Port : Jack 07 & 08

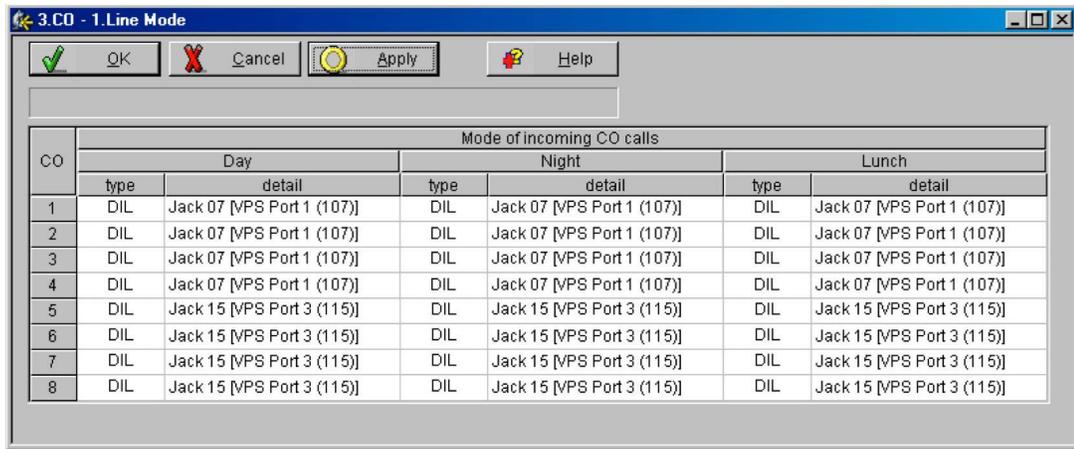

VM2 APT Port : Jack 15 & 16

When "Jack 7 & 8" is selected, extension jack numbers 07 and 08 will be in extension group 7 automatically. Likewise, when "Jack 15 & 16" is selected, extension jack numbers 15 and 16 will be in extension group 8 automatically. Also the Extension Hunting type is set as "Circular" automatically in each of these 2 extension groups. You can confirm these automatic settings in the "2.Extension-6.Extension Group" screen.

Example trunk (CO line) feature settings:

- a) If the VPS is answering all calls:
Go to the "3.CO-1.Line Mode" screen. Program all lines DIL to the first extension of the Voice Mail hunt group. The PBX will allow incoming trunk (CO line) calls to hunt only if the trunks (CO lines) are DIL to the first port of the hunt group. Lines programmed as "Normal" do not hunt. Click "Apply" to save the changed data.

- b) If the VPS is only answering calls not answered by the operator (Operator Backup):
Go to the "3.CO-2. Incoming / Outgoing" screen. Program lines to ring operator extensions

immediately for all time modes. To give the operator time to answer the call before the VPS picks up, we recommend setting the delay to a few seconds for each extension connected to the VPS. Set a different delay time for each extension connected to the VPS. Finally, go to the "3.CO-Line Mode" screen and set all trunk (CO line) types to "Normal". Click "Apply" to save the changed data.

Jack	Extension	Ringing for incoming CO calls						Outgoing Call		
		Day		Night		Lunch		Day	Night	Lunch
		Ring	Start Time	Ring	Start Time	Ring	Start Time

8	Normal	---	Normal	---	Normal	---

- c) If the VPS is only answering calls not answered by user extensions:
Go to the "3.CO-2. Incoming / Outgoing" screen. Program lines to ring user extensions immediately for all time modes. To give users time to answer the call before the VPS picks up, we recommend setting the delay to a few seconds for each extension connected to the

4.3 KX-TA824 PBX Programming for APT Integration

VPS. Set a different delay time for each extension connected to the VPS. Finally, go to the "3.CO-Line Mode" screen and set all trunk (CO line) types to "Normal". Click "Apply" to save the changed data.

3.CO - 2.Incoming / Outgoing

CO Line Number: 1

Jack	Extension	Ringing for incoming CO calls						Outgoing Call		
		Day		Night		Lunch		Day	Night	Lunch
		Ring	Start Time	Ring	Start Time	Ring	Start Time			
01	101	<input checked="" type="checkbox"/>	Immediate	<input checked="" type="checkbox"/>	Immediate	<input checked="" type="checkbox"/>	Immediate	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
02	102	<input checked="" type="checkbox"/>	Immediate	<input checked="" type="checkbox"/>	Immediate	<input checked="" type="checkbox"/>	Immediate	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
03	103	<input checked="" type="checkbox"/>	Immediate	<input checked="" type="checkbox"/>	Immediate	<input checked="" type="checkbox"/>	Immediate	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

8	Normal	---	Normal	---	Normal	---

- Complete the PBX-VPS connection by following from step 1 of 4.7 Completing the PBX-VPS Connection.

4.4 KX-TD Series PBX Programming for DPT Integration

For KX-TD500 programming, refer to 4.5 KX-TD500 PBX Programming for DPT Integration.

Programming procedures and availability may vary by PBX model, software version, etc. Refer to the documentation included with the PBX or consult your dealer for more information.

Note

- Do not use system programs [106] or [602] for DPT Integration.
- The next 2 sections (4.4.1 KX-TD Series PBX Programming via the Manager's Extension and 4.4.2 KX-TD1232 Series PBX Programming via the Operating and Maintenance Tool) use the KX-TD1232 as an example. Refer to these examples when configuring the KX-TA1232 and KX-TD816.

4.4.1 KX-TD Series PBX Programming via the Manager's Extension

For KX-TD500 programming, refer to 4.5 KX-TD500 PBX Programming for DPT Integration.

It is important that the PBX has the proper software level to allow DPT Integration with the VPS. Follow the procedures below to confirm the software level, then complete the required programming before starting up the VPS.

Note

- There are 2 methods of programming available for the KX-TD1232. The instructions below show how to program without the operating and maintenance tool. For instructions on programming with the operating and maintenance tool, please see 4.4.2 KX-TD1232 Series PBX Programming via the Operating and Maintenance Tool.

All of the following procedures must be performed through system programming. Refer to the KX-TD1232 Programming Guide or Installation Manual for instructions on how to enter the system programming mode.

Software Verification

1. Verify Software—If you are configuring a 2-cabinet system, remember to check both cabinets. The software must be the same in each. Check the software version of the KX-TD1232 using System Program [116].

Example: **P231U60403XX**

The underlined digits represent the software production date code (year, month, day). For DPT Integration, the production date must be 60403 or later.

If the software version of the PBX is lower than this, you may not be able to utilize some of the features available only with DPT Integration. For more information, consult your dealer.

From the **SYS-PGM NO ?** screen:

- a) Enter [116].
- b) Press the **NEXT** button (SP-PHONE).

- c) **Enter** the system number ([0] or [1], master/slave). The PBX displays the ROM version and the date it was created.
2. **Set** the date and time using System Program [000].
3. **Set** PBX extension numbering using System Program [003].
4. **Assign** the **Voice Mail port**. This program tells the PBX which jack will be connected to the VPS. This allows the PBX to send the proper DPT Integration information to those ports.

Note

- You can assign a maximum of 6 jacks (12 ports) with the KX-TD816 and KX-TD1232.
- If you are configuring a 2-cabinet system, all Voice Mail Ports should be assigned to either the Master or Slave System.

*From the **SYS-PGM NO ?** screen:*

- a) **Enter** [117].
- b) **Press** the **NEXT** button (SP-PHONE).
Screen output: M:
- c) **Enter** the jack number (**02-64**) of the port you will use for the Voice Mail.
- d) **Press** the **STORE** button.
- e) **Press** **END** (HOLD) when finished.

Conditions: *Jack 01 cannot be used as a Voice Mail port. A jack programmed as a Manager Extension (System Program [006]) cannot be used in this program.*

5. Follow this step if you are setting flexible numbering. If you are not setting flexible numbering, continue from step 6.
Voice Mail Extension Number Assignment is automatically set. Use System Program [118] or [127] to assign an extension number to each Voice Mail port. Because each jack connected to the VPS provides 2 extensions, this enables you to assign extension numbers to each port. You can assign any extension number that is not already assigned to another port. To reach the VPS, users dial these extension numbers. It is not necessary to change the default programming for the extensions 165 and 166 (or 265 and 266).

*From the **SYS-PGM NO ?** screen:*

- a) **Enter** [118].
- b) **Press** the **NEXT** button (SP-PHONE).
Screen output: VM NO? →
- c) **Press** the **NEXT** button (SP-PHONE).
Screen output: VM-01:#_ _ -1: 165
_ _ = the port number you entered in program 117
- d) **Enter** the **Extension Number** that you want this port to have.
The default extension number for port 1: 165; port 2: 166
- e) **Press** the **STORE** button.
- f) Repeat steps c, d, and e until all extension numbers are entered.

Conditions: *No 2 jacks on the PBX can have the same extension number. If you try to enter a number that is already assigned, you will hear an error tone. Each digital extension connected provides 2 Voice Mail ports and must have 2 different extension numbers assigned.*

6. Make sure all installation and line connections have been completed as described in Section 2 Installation.
7. **Connect** the **jack** assigned in Step 4 to the VPS.
8. Complete the PBX-VPS connection by following from step 1 of 4.7 Completing the PBX-VPS Connection.

4.4.2 KX-TD1232 Series PBX Programming via the Operating and Maintenance Tool

Follow these steps after communication between the KX-TD1232 and the programming software has been established. Refer to the Operating and Maintenance manual for connection information.

1. Check the software version.
 - a) Go to the *Main Menu*. Press the **ALT** key and the letter **[V]** at the same time.
 - b) Verify the Operating and Maintenance version being used.

Sample display: *Connect DSHS: KX-TD1232*
 ROM Version: [---P231UxxxxxB] CAN
 DB data (PC): Empty
 Version: 4.03A5 [0008301332] MUK

Note

- If you have an older version of the maintenance tool but have the correct ROM version in the PBX, you may still program the KX-TD1232 but you must program using the Manager's Extension.

- c) Verify the ROM version of the KX-TD1232.

Example: **P231U60403XX**

The underlined digits represent the software production date code (year, month, day). For DPT Integration, the production date must be 60403 or later.

If the software version of the PBX is lower than this, you may not be able to utilize some of the features available only with DPT Integration. For more information, consult your dealer.

2. Go to the *Main Menu*. Choose **"System Data Programming"** (BATCH [1] or INTERACTIVE [2]).
3. Choose **"System"** from the *System Data Programming Main Menu*.
4. Choose **"Voice Mail Integration"** from the *System Menu*.
5. First, **enter the port numbers** that will be connected to the VPS. If desired, change the default extension numbers of the Voice Mail ports.
6. **Step 6 should only be completed if the VPS is going to answer all incoming trunk (CO line) calls directly.**

Return to the *System Data Programming Main Menu*. Select **"Line"** and then select **"CO Line Setting 1"** or **"CO Line Setting 2"**. Program all lines DIL to the first extension of the Voice Mail hunt group.

7. Continue from step 5 of 4.4.1 KX-TD Series PBX Programming via the Manager's Extension.

4.5 KX-TD500 PBX Programming for DPT Integration

Follow the procedure below to program the VPS card(s) for DPT Integration.

Programming procedures and availability may vary by PBX model, software version, etc. Refer to the documentation included with the PBX or consult your dealer for more information.

1. Assignment of the VPS card to be connected to the VPS

Note

- If the VPS card to which the VPS will be assigned is already installed in the KX-TD500, skip the steps a through d. If a new VPS card is installed in the KX-TD500, follow the steps below.
 - a) Go to the "1-1 Slot Assignment" screen.
 - b) Assign the slot "Card Type" to be installed to "DLC" or "DHLC" card.
 - c) Click "Apply" to save the card type assignment.
 - d) Set "Status" to "INS".

Basic Shelf			Expansion Shelf 1			Expansion Shelf 2		
Slot No.	Card Type	Status	Card Type	Status	Card Type	Status	Card Type	Status
1	DHLC	INS						
2								
3								
4	DHLC	INS						
5								
6	ELCOT	INS						
7	DLC	INS						
8								
9								
10								
11								
12								
13	CPU							
14	TSW							

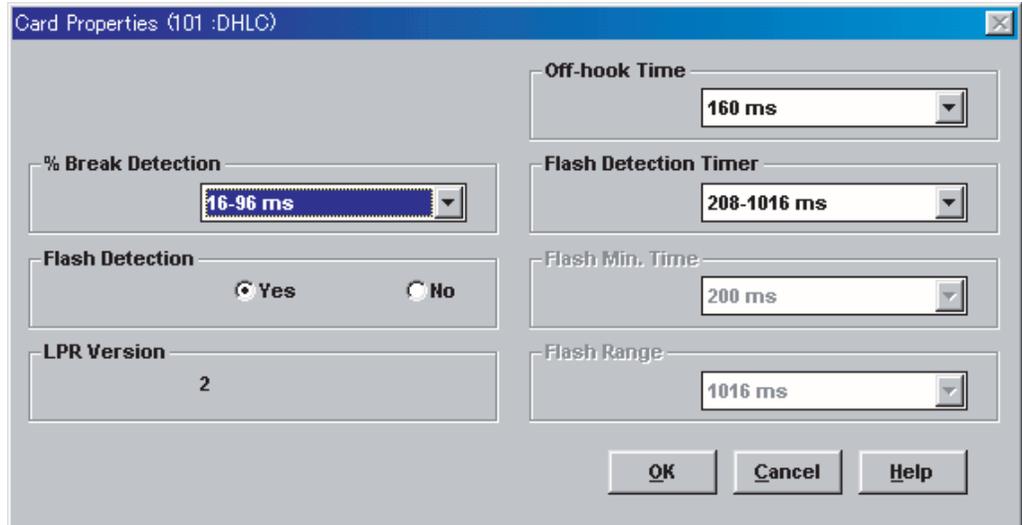

1-1 Slot Assignment

Close Help

e) Check the information of "**Card Properties**" and confirm the **LPR version** of the card.

Note

- The LPR Version must be "2" or higher for the VPS card (101: DLC/DHLC) to which the control channel will be assigned.

f) Check the information of "**CPU Card Information**" and confirm the **Software Version** of the KX-TD500. The software version must be Q171A or higher for DPT Integration to be utilized.

Note

- If the software version of the KX-TD500 is lower than this, you may not be able to utilize some of the features available only with DPT Integration. For more information, call National Parts Center at 1-800-833-9626.
- In the example below, Q171AB represents the software version and 010427A represents the software production date code (year, month, day).

2. Assignment of the ports to be connected to the VPS
 - a) Go to the "1-3 Extension Port Assignment" screen.
 - b) Select the appropriate VPS card (101: DLC/DHLC) in the "Card No." menu.
 - c) Set the attribute of the valid ports to be connected to the VPS to "VPS (DPT)".
 - d) Click "Apply" to save the changed data.

Note

- The parameters except for "Attribute" will disappear and the DN (Directory Number) will be cleared.

Port No.	Attribute	Tel. Type	DN	Group No.	Parallel / XDP	Status
1	VPS (DPT)					
2	TEL	Unknown	1002	1	Parallel	INS
3	TEL	T7533	1003	1	Parallel	INS
4	TEL	Unknown	1004	1	Parallel	INS
5	TEL	T7431	1005	1	Parallel	INS
6	TEL	Unknown	1006	1	Parallel	INS
7	TEL	Unknown	1007	1	Parallel	INS
8	TEL	Unknown	1008	1	Parallel	INS

Buttons: DN Refer, 1-3 Extension Port Assignment, OK, Apply, Cancel, Help

3. Assignment of VPS card and its model
 - a) Go to the "1-4 VPS (DPT) Port Assignment" screen.
 - b) Select the corresponding equipment number in the "TVS No." menu.
 - c) Select your VPS model in the "Type" menu.
TVA50: Select "TVS200-1"
TVA200: Select "TVS300"
 - d) Select the card (101: DLC/DHLC for jacks 1-8; 201: DLC/DHLC for jacks 9-12) which connects with the VPS in the "VPS Card" menu.

1-4 VPS (DPT) Port Assignment

TVS No. VPS Card Type

Jack No.	Port No.	Ext No. 1		Ext No. 2		Status
		DN	Group No.	DN	Group No.	
1	<input type="text"/>	<input type="text" value="OUS"/>				
2	<input type="text"/>	<input type="text" value="OUS"/>				
3	<input type="text"/>	<input type="text" value="OUS"/>				
4	<input type="text"/>	<input type="text" value="OUS"/>				
5	<input type="text"/>	<input type="text" value="OUS"/>				
6	<input type="text"/>	<input type="text" value="OUS"/>				

1-4 VPS (DPT) Port Assignment

4. Assignment of the extension ports connected to the VPS
 - a) Continue the programming in the "1-4 VPS (DPT) Port Assignment" screen.
 - b) **Select** the extension port number of the card (DLC/DHLC) to which the VPS (DPT) jack is to be connected in the "**Port No.**" menu.

Note

- This menu is displayed only when the attribute of the ports is assigned to "VPS (DPT)" in step 2.
This program tells the KX-TD500 which extension ports are connected to the VPS. This allows the KX-TD500 to send the proper Digital Integration information to these ports.
Jack No.1 must be assigned, because its port is used as the channel to control the VPS.

- c) **Assign "DN"** for the port (click "**DN Refer**" to check the available directory numbers).

Note

- This program allows you to assign an extension number to each Voice Mail port. Since each port connected to the VPS provides two extensions, this enables you to assign extension numbers to each port. To reach the VPS, users dial these extension numbers.

- d) **Assign "Extension Group No."** for the port.

Note

- Specify the extension group number (126 or 127 by default) to which VM or AA is assigned. Group numbers 1 to 128 are available to the VPS through additional programming.
(Selecting VM has the same effect as selecting AA, regardless of how the VPS is programmed.)

- e) **Click "Apply"** to save the changed data.

- f) **Set "Status"** to "INS".

Jack No.	Port No.	Ext No. 1 DN	Ext No. 1 Group No.	Ext No. 2 DN	Ext No. 2 Group No.	Status
1	1	1065	126	1066	127	INS
2						OUS
3						OUS
4						OUS
5						OUS
6						OUS

5. To set the trunk (CO line) features, follow the instructions in "Settings for the trunk (CO line) features" (5.6 KX-TD500 PBX Programming for Inband Integration).
6. Set the PBX to send DID numbers to the VPS.
 - a) Go to the "2-7 System Option 6" screen.
 - b) Enable "67.Sending DID Number to VPS".

Note

- This setting enables the PBX to send DID numbers to the VPS. If you want to use the features which utilize DID numbers (e.g., Toll Saver, DID Call Routing), you must enable this setting.

2-7 System Option 6

61. Auto Answer with held call
 Disable Enable

67. Sending DID Number to VPS
 Disable Enable

63. VM Trunk Service for DID
 Disable Enable

64. CNIP Service
 Disable Enable

65. Alert Ringing
 Disable Enable

2-7 System Option 6

OK Apply Cancel Help

7. **Connect** the **jack** assigned in Step 4 to the VPS.

8. Complete the PBX-VPS connection by following from step 1 of 4.7 Completing the PBX-VPS Connection.

4.6 KX-TA Series PBX Programming for APT Integration

For KX-TA824 programming via the Operating and Maintenance Tool, refer to 4.3 KX-TA824 PBX Programming for APT Integration.

For KX-TA1232 programming, refer to 4.4 KX-TD Series PBX Programming for DPT Integration.

Programming procedures and availability may vary by PBX model, software version, etc. Refer to the documentation included with the PBX or consult your dealer for more information.

Note

- The KX-TA824 can also be programmed via PC using the Operating and Maintenance Tool. Refer to 4.3 KX-TA824 PBX Programming for APT Integration.
- For KX-TA824, PBX software version 1.0.44 or later is required for APT Integration. Consult your dealer for more information.

It is important that the PBX has the proper software level to allow APT Integration with the VPS. Follow the procedures below to confirm the software level, then complete the required programming before starting up the VPS.

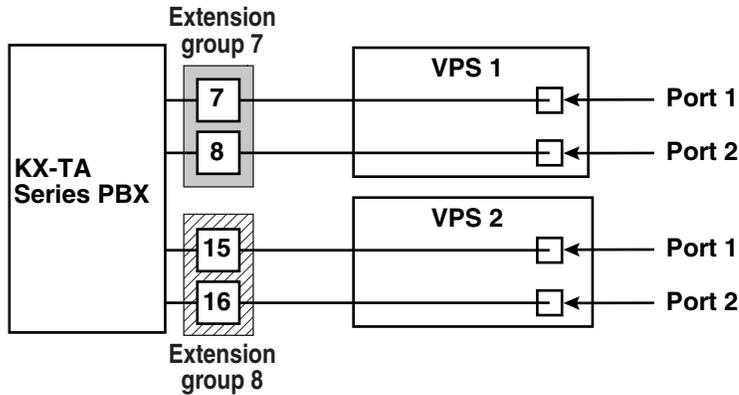

All of the following procedures must be completed after entering system programming. Refer to the KX-TA series Installation Manual for instructions on how to enter the system programming mode.

1. Using the Manager Extension, check the software version of the KX-TA series PBX using System Program [998].
Example: **Y581J000421(XX)**
The underlined digits represent the software production date code (year, month, day). For APT Integration, the production date must be 000421 or later.

If the software version of the PBX is lower than this, consult your dealer.

*From the **SYS-PGM NO ?** screen:*

- a) Enter [998].
 - b) **Press** the **NEXT** button (SP-PHONE). The PBX displays the ROM version and the date it was created.
2. Set the date and time using System Program [000].
Date and time are automatically synchronized between the VPS and the PBX during Quick Setup.
 3. Set extension numbering using System Program [009].
 4. Assign the voice mail port. This program tells the PBX which jacks will be connected to the VPS. This allows the PBX to send the proper APT Integration information to those ports. Jack 07, or jacks 07 and 08 can be assigned for the VPS1 as the **voice mail port**. Jack 15, or jacks 15 and 16 can be assigned for the VPS2.

From the **SYS-PGM NO ?** screen:

- a) Enter [130] (for VPS1) or [131] (for VPS2).
- b) Press the **NEXT** button (SP-PHONE).
Screen output: *Disable*
- c) Press the **SELECT** button (AUTO-ANSWER).
Screen output: *Port 7 or Port 15*
- d) To assign 2 jacks, press the **SELECT** button (AUTO-ANSWER) again.
Screen output: *Port 7 & 8 or Port 15 & 16*
To assign 1 jack, skip this step.
- e) Press the **STORE** button.
- f) Press **END** (HOLD).

Conditions: The lowest jack (jack 07 or jack 15) entered here must be connected to Port 1 of the VPS.

To change the current assignment from "Port 7" to "Port 7 & 8", you must first change it to "Disable". Likewise, if you want to change it from "Port 7 & 8" to "Port 7", you must first change it to "Disable". If the current assignment is already "Disable", you can make a change in 1 step. This condition also applies to System Program [131].

When "Port 7 & 8" is selected in program [130], extension jack numbers 07 and 08 will be in extension group 7 automatically. Likewise, when "Port 15 & 16" is selected in program [131], extension jack numbers 15 and 16 will be in extension group 8 automatically. Also the Extension Hunting type is set as "Circular" automatically in each of these 2 extension groups.

5. Select the appropriate trunk (CO line) feature settings depending on how your customer plans to use the VPS: a) to answer all incoming calls, b) as an operator backup, or c) to only answer calls not answered by user extensions.

Recommended trunk (CO line) feature settings:

- a) If the VPS is answering all incoming calls:

Trunk Mode —Use System Programs [414] (Day Mode), [415] (Night Mode), [416] (Lunch Mode) to each trunk (CO line) to "DIL" mode, and assign the first extension of

the Voice Mail hunt group as the destination for calls received on each trunk (CO line). The PBX will allow incoming trunk (CO line) calls to hunt only if the trunks (CO lines) are DIL to the first port of the hunt group. Lines programmed as "Normal" do not hunt.

- b) If the VPS is only answering calls not answered by the operator (Operator Backup):

Flexible Ringing Assignment —For each trunk (CO line), use System Programs [408] (Day mode), [409] (Night Mode), and [410] (Lunch Mode) to enable ringing at the operator's extension (jack).

Delayed Ringing Assignment —To give the operator time to answer the call before the VPS picks up, we recommend setting the delay to a few seconds for each extension connected to the VPS. Set a different delay time for each extension connected to the VPS. Use System Programs [411] (Day Mode), [412] (Night Mode), and [413] (Lunch Mode).

Trunk Mode —Set the mode for each trunk (CO line) to "Normal". Use System Programs [414] (Day Mode), [415] (Night Mode), and [416] (Lunch Mode) to set this parameter.

- c) If the VPS is only answering calls not answered by user extensions:

Flexible Ringing Assignment —For each trunk (CO line), use System Programs [408] (Day Mode), [409] (Night Mode), and [410] (Lunch Mode) to enable ringing on every extension (jack) that you want to have ring.

Delayed Ringing Assignment —To give users time to answer the call before the VPS picks up, we recommend setting the delay to a few seconds for each extension connected to the VPS. Set a different delay time for each extension connected to the VPS. Use System Programs [411] (Day Mode), [412] (Night Mode), and [413] (Lunch Mode).

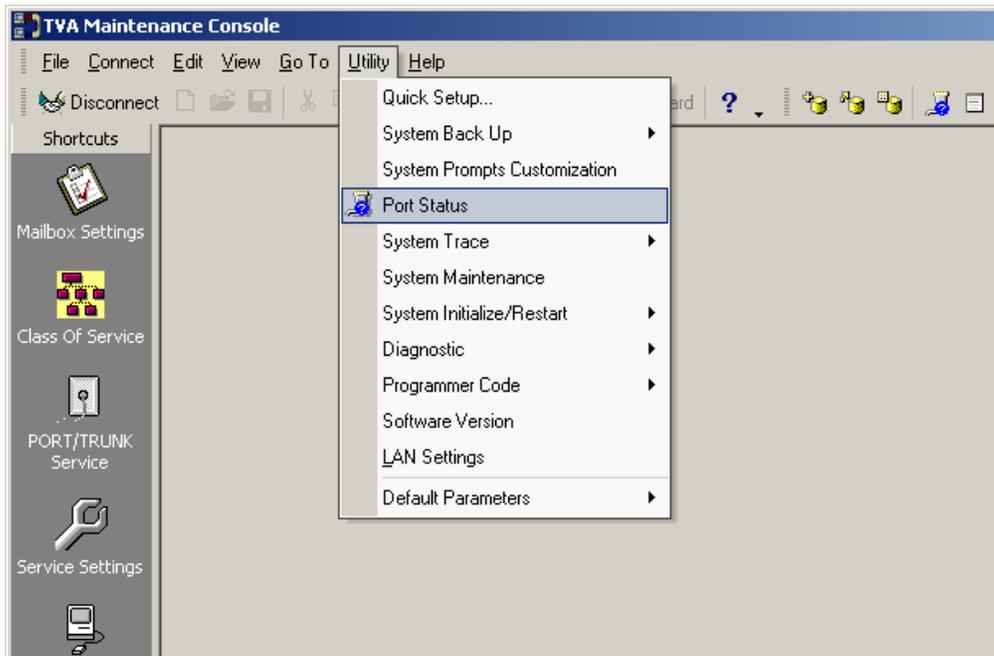

Trunk Mode —Set the mode for each trunk (CO line) to Normal. Use System Programs [414] (Day Mode), [415] (Night Mode), and [416] (Lunch Mode) to set this parameter.

6. Connect the jack(s) assigned in Step 3 to the VPS.
7. Complete the PBX-VPS connection by following from step 1 of 4.7 Completing the PBX-VPS Connection.

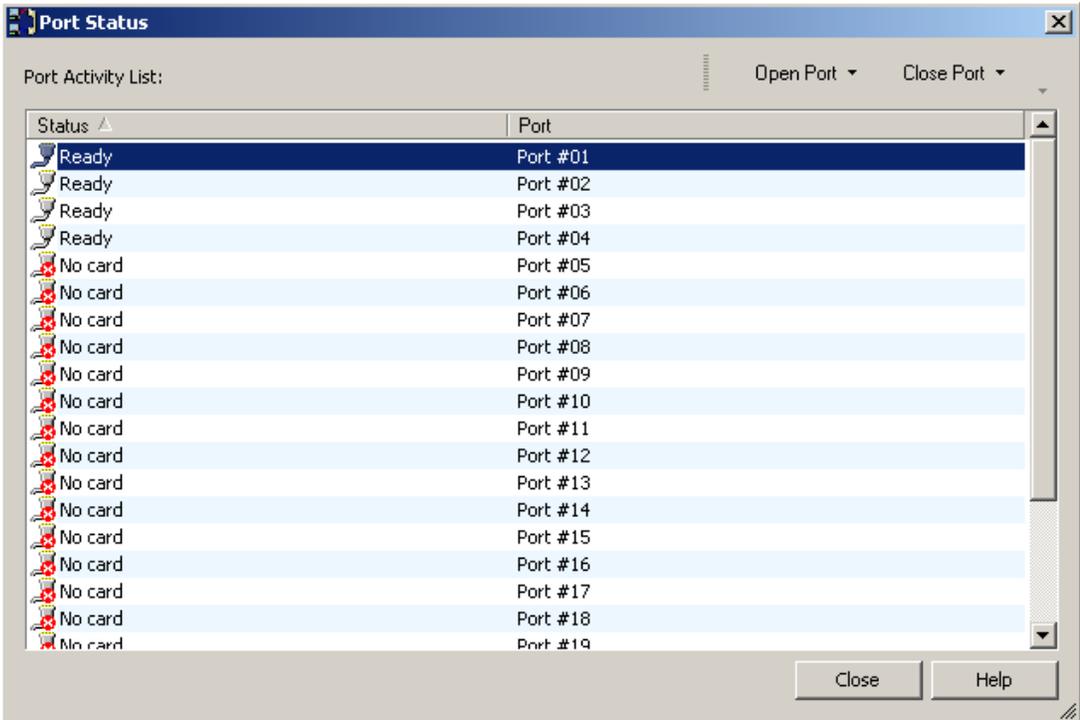

4.7 Completing the PBX-VPS Connection

Once you have finished installing all optional cards, connecting all telephones to the PBX, and configuring the PBX for APT/DPT Integration, proceed with the following steps to complete and test the PBX-VPS connection.

1. Start KX-TVA Maintenance Console (see 3.2 KX-TVA Maintenance Console Installation).
2. Using KX-TVA Maintenance Console, initialize the PBX (see 7.1 Initializing the VPS).
3. Start the Quick Setup utility and proceed with Quick Setup (see 6.1.2 Quick Setup).
4. Click "Utility" on the menu bar.
5. Select "Port Status".

6. Make sure each line connecting the PBX and VPS is shown as being "Ready".

Note

- If the correct lines are not online, make sure the correct PBX type is selected, that the PBX is properly programmed for APT/DPT Integration, and that the PBX and VPS are connected by 4-conductor cables.
7. To test the connection, dial the extension number of the VPS from a telephone connected to the PBX. If the VPS answers, the APT/DPT connection has been established.

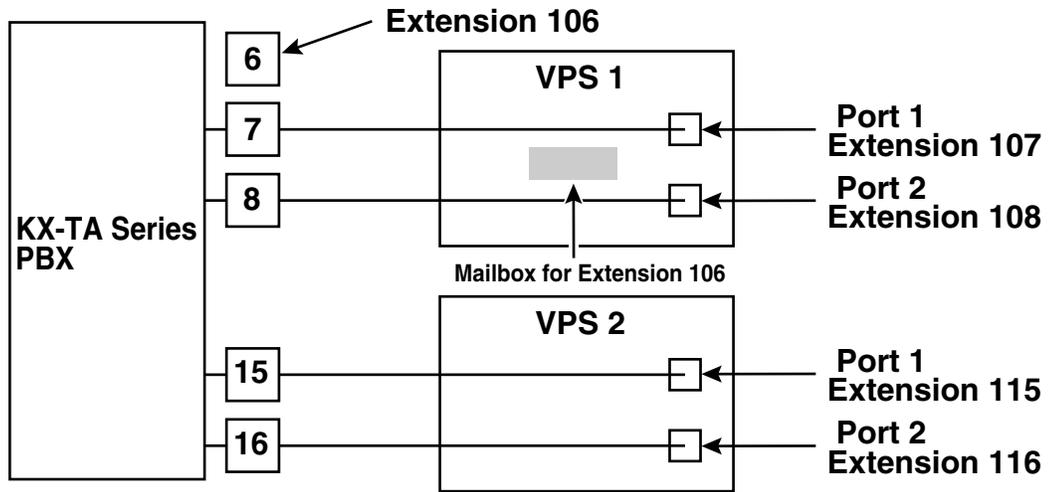

CAUTION

Important information for KX-TA users (except KX-TA1232):

When 2 VPSs are connected to a KX-TA series PBX, the following procedures should be performed to make the VPSs function correctly.

1. Delete a mailbox in either VPS so that each extension has only one mailbox.
 After Quick Setup is complete, each extension has a mailbox in both VPS 1 and VPS 2, however, each extension should have only 1 mailbox.
2. Match extension settings with subscriber settings.
 For each subscriber's extension, make sure that the destination for Call Forwarding and Voice Mail Transfer is the extension number of the VPS that contains the subscriber's mailbox.
 For example (see diagram below), if jack 06 (extension 106) has its mailbox in VPS 1, assign extension 107 or 108 as the destination, not extension 115 or 116.
3. Make sure that the extension numbers of VPS 1 are 107 and 108, and the extension numbers of VPS 2 are 115 and 116.

4.7 Completing the PBX-VPS Connection

Section 5

PBX Programming for Inband Integration (KX-TVA50 only)

This section explains how to configure selected Panasonic PBXs to use Inband Integration with the VPS.

5.1 Guidelines for Inband Integration

5.1.1 What is Inband Integration?

In order for the VPS to function, it must be integrated with the PBX it serves. The type of integration that is used determines how voice (caller messages, VPS prompts, etc.) and data (extension status, button presses, etc.) are sent between the VPS and the PBX.

When the VPS and PBX use Inband Integration, voices are sent using analogue technology, and data is sent using analogue DTMF tones.

The PBX informs the VPS of the status of extensions by sending DTMF tones and Call Progress tones to the VPS. Similar to an extension user, the VPS places calls by going off-hook and dialing numbers. It starts call transfers with a hookswitch flash to put callers on hold and then dials the extension number, just like an extension user.

Signals Sent Between the PBX and VPS

<u>PBX to VPS</u>	<u>VPS to PBX</u>
Call Progress Tones	SLT Signals
• ringback	• on/off hook
• busy	• hookswitch flash
• reorder	DTMF tones
DTMF tones	

5.1.2 When to Use Inband Integration

The type of PBX and/or the type of extension cards installed in the PBX will determine whether Inband Integration should be used. Generally, if the VPS is connected to an APT/DPT Integration compatible Panasonic PBX, APT/DPT Integration—not Inband Integration—is the ideal integration method. See 1.1.7 Compatible PBXs for more information.

Note

- Certain VPS features are not available when using Inband Integration.
- Availability of VPS features depend on the PBX being used.

5.1.3 PBX Requirements for Inband Integration

The type of VPS, PBX, and PBX extension cards used will determine the availability of certain features. In order to use the features described in this section, you may need to test the PBX for compatibility or refer to the documentation included with the PBX.

Single Line (Tip/Ring) Port Circuits

The VPS can only be connected to PBX extension jacks that support standard single line telephones (SLTs). Some PBXs need an OPX card to provide this connection. **However, some OPX cards do not provide all the capabilities listed in this section.**

Following are the minimum current and voltages that the PBX must supply:

Minimum Loop Current	20 mA
Minimum Line Voltage	7 V DC
Minimum Ringing Voltage	40 V AC

DTMF Signaling

For system users to access VPS services and features, they must be able to send DTMF signals from their telephones to the VPS port. As a general rule, most SLTs can send DTMF signals; however, many proprietary telephones cannot. Some PBXs need to be programmed to make proprietary telephones use DTMF signaling.

TEST: Call an SLT extension from the telephone in question. When the call is answered, see if the person receiving the call hears DTMF tones when numbers are dialed.

Message Waiting Notification on an SLT

When the Message-Waiting-Lamp-On code is dialed by the VPS, either the lamp on the corresponding extension should light or the extension should receive a stutter dial tone. The VPS functions best when the extension number of the mailbox subscriber follows the Light-On or Light-Off code. On some PBXs, however, the extension number is dialed first, followed by a hookswitch flash and then the On code. This presents a problem if the extension is answered before the VPS sends the hook-switch flash.

If the PBX does not provide Message Waiting Notification on an SLT, the VPS can only notify mailbox owners by dialing a beeper number or user-assigned extension.

This process slows down VPS performance as it dials the beeper or extension number and waits to confirm notification. The beeper or user-assigned extension notification is meant to be used for necessity, usually for mailbox owners who are often out of the office (e.g., sales people or field representatives). The only other option, without Message Waiting Notification is for mailbox owners to periodically call the VPS to check for messages.

TEST: See if dialing the On code from an SLT can turn on an extension's message waiting indicator.

Screened Transfer from an SLT

The PBX must provide a screened transfer from an SLT for the VPS to function properly.

A screened transfer:

1. *Puts the caller on hold, usually with a hookswitch flash.*
2. *Dials the extension.*

5.1 Guidelines for Inband Integration

3. *Checks to see if the called subscriber is in, out, or on another line, and whether or not that subscriber accepts the transfer.*
4. *Completes the transfer (by going on-hook) or notifies the caller that the party is busy or not available. It then gives the caller an opportunity to leave a message.*

If the PBX does not provide screened transfer from an SLT, the VPS cannot give callers the option to leave a message in a subscriber's mailbox.

**TEST: Place a trunk (CO line) call from an SLT. See if you can set up a screened transfer to another extension. Next, try the same test with an intercom call.
(The VPS may have to transfer both types of calls.)**

Follow-on ID or Called Party ID

When forwarding or transferring a call to the VPS, a PBX with Follow-on ID sends the mailbox number of the called subscriber to the VPS before connecting the caller. The VPS responds by playing that subscriber's personal greeting. This operation is sometimes called Call Forward to Mailbox. Without this feature, the VPS cannot immediately play the called extension's greeting message when the line is busy or there is no answer because the VPS does not know which mailbox to send the caller to.

5.2 PBX Settings for Inband Integration

5.2.1 General Guidelines and Definitions

In order for the VPS and PBX to communicate properly, certain settings of both the VPS and PBX should be set to the same values.

Programming procedures and availability may vary by PBX model. Consult your dealer for more information.

5.2.2 Global Parameters

Global parameters are hardware settings that affect integration with the PBX. There is no need to change these settings in a typical installation. Only change these parameters when connecting the VPS to a PBX other than a KX-T series PBX.

Each port on the VPS should match the type of signaling the PBX expects. If you need to change these settings for the VPS, refer to 2.6.1 Global Parameters in the Programming Manual, and refer also to the documentation included with the PBX.

- **Flash/Recall Time**
The minimum length of time that the PBX requires to recognize a hookswitch flash/recall. Choose the amount that is equal to or greater than the PBX's setting.
- **CPC Signal (Calling Party Control Signal)**
The length of time allowed for the short break in loop current that is used to indicate that the caller has hung up; usually set to NONE, since most PBXs do not provide this signal to single line ports. If choosing a setting other than NONE, use an amount equal to or less than the PBX or telephone company provided CPC signal.
- **Disconnect Time**
The length of time that the line is temporarily unavailable after a call has ended.
- **Delay After Dialing Before Analysis**
The length of time between the end of a call and the start of "Call Progress Tone" detection when an outgoing call is dialed.
- **Maximum Time to Wait for Dial Tone**
The length of time that the VPS must wait for dial tone detection.
- **Dial Start Mode**
Specifies whether to detect "Dial Tone" or wait the specified time in "Off-hook Delay" when an outgoing call is dialed.
- **Off-hook Delay**
The length of delay time when "Off-hook Delay" is selected in "Dial Start Mode".
- **Delay After Dialing Before On-hook**
The length of time that the VPS waits for an answer when an outgoing call is dialed. If the time period expires with no answer, the VPS disconnects the call.
- **DTMF Cut Length**
The length of time for DTMF to be deleted when it is detected while in recording.
- **Minimum Message Length**
Specifies the minimum message recording length. Messages shorter than the specified minimum recording length are discarded from the mailbox.
- **Call Progress Tone Detection for Inband Mode**
Specifies whether to detect "Call Progress Tone".

5.2.3 PBX Interface Parameters

The following items can be programmed using KX-TVA Maintenance Console under "System Parameters" by selecting the "Parameters" tab.

PBX Environment

- **PBX Type**
Specifies the type of PBX which is connected to the VPS.
- **Integration Mode**
Select "Inband". If PBX type is set to the Panasonic KX-T series, the Inband Signaling parameters are set automatically and should not be altered.

SEQUENCE CODES

D	Disconnect
F	Hookswitch Flash
R	Ring Detection
T	Dial Tone Detection
X	Dial Extension
,	Dialing Pause (default 1 s)
;	Dialing Pause (default 3 s)
0-9, *, #	DTMF Tones

- **Maximum Extension Number Length**
Specifies the maximum number of digits that the connected PBX recognizes as an extension number.
- **Extension Number of VPS Port**
Specifies the extension number for each VPS port on the connected PBX.

Note

- Extension numbers of the VPS ports will automatically be assigned when the PBX type has been changed.
- **Operator Transfer Sequence**
Tells the VPS how to transfer a call to the operator.
Example: FTX [hookswitch flash→dial tone→dial (operator) extn.]
- **Extension Transfer Sequence**
Tells the VPS how to transfer a call to an extension.
Example: FTX [hookswitch flash→dial tone→dial extn.]
- **Alternate Extension Transfer Sequence**
Tells the VPS how to transfer a call to an extension that belongs to the "Alternate Extension Group". This is useful for extensions that need a special transfer procedure (i.e., blind transfer) such as modem extensions.
Example: FTXD [hookswitch flash→dial tone→dial extn.→hang up]

- **Reconnect Sequence on Busy**
Tells the VPS how to return to the caller if the called extension is busy. PBXs differ in how they handle this function. Test from an SLT to determine the sequence.
- **Reconnect Sequence on No Answer**
Tells the VPS how to return to the caller if the called extension does not answer. PBXs differ in how they handle this function. Test from an SLT to determine the sequence.
- **Reconnect Sequence on Refused Call**
Tells the VPS how to return to the caller if the called extension's owner has enabled Call Screening to not take the call. PBXs differ in how they handle this function. Test from an SLT to determine the sequence.
- **Light-On Sequence for Message Waiting Lamp**
This is the dialing sequence that the VPS must use to turn on a message waiting lamp at an extension.
- **Light-Off Sequence for Message Waiting Lamp**
This is the dialing sequence that the VPS must use to turn off a message waiting lamp at an extension.
- **Message Waiting Lamp Retry Time**
Specifies the number of times to retry the Message Waiting Lamp light-on/light-off process. This parameter is enabled only when the integration mode is Inband Integration or No Integration.
- **Message Waiting Lamp Interval Time**
Specifies the time between retries for the Message Waiting Lamp light-on/light-off process. This parameter is enabled only when the integration mode is Inband Integration or No Integration.
- **Call Waiting Sequence**
This sequence is carried out by the VPS to perform call waiting when the called extension is busy. PBXs differ in how they handle this function. Test from an SLT to determine the sequence.
- **Release Sequence for Call Waiting**
This sequence is carried out by the VPS to release call waiting. PBXs differ in how they handle this function. Test from an SLT to determine the sequence.

Inband Signaling

These parameters are used when the Integration Mode is set to Inband. If the PBX type is set to a KX-T series system, these parameters will be automatically set. If another type of PBX is used, check the system's Installation Manual for settings.

Code (default)	Call State	Sent to the Voice Mail Port When...
1	Ringback Tone	The extension dialed is ringing.
2	Busy Tone	The extension dialed is busy.
3	Reorder Tone	An invalid extension number is dialed or the call is inadvertently connected to another Voice Mail port (also heard when no DTMF receiver is available to the Voice Mail extension).
4	DND	The extension dialed has set the Do Not Disturb feature (DND).
5	Answer	The extension dialed is answered.
6	Forwarded to Voice Mail (Ringing)	The extension dialed is forwarded to Voice Mail and another Voice Mail port is able to answer. (This lets the first Voice Mail port, usually an Auto Attendant, send the call to the other Voice Mail port.)
7	Forwarded to Voice Mail (Busy)	The extension dialed is forwarded to Voice Mail and no other Voice Mail ports are available to accept the call. (This signals the Voice Mail port, usually Auto Attendant, to let the caller leave a message.)
8	Forwarded to Extn.	The extension dialed is forwarded to another non-Voice Mail extension.
9	Confirmation Tone	The Message Waiting Lamp On or Message Waiting Lamp Off code is dialed successfully.
#9	Disconnect	The caller disconnects. The telephone company must set a CPC signal to the PBX line for this signal to work for trunk (CO line) calls.

Digit Translation Table Parameters

These parameters allow PBXs that have a fixed Follow-on ID sequence to be used with the VPS. For example, a Follow-on ID sequence of [* * * 1001] can be changed to [#61001] by using these parameters.

- **Inter-Digit Time-out**
This parameter defines the interval of incoming signals (Follow-on ID) from the PBX to the VPS.
- **Translation Table**
When the system receives digits within the inter-digit time, it checks them against the input table. If they are found, the VPS translates the digits according to the table.

Transfer to Outside Parameters

These parameters specify how the VPS will transfer calls to trunks (CO lines) from the following services: Custom Service, Call Transfer Service, and Personal Custom Service.

[Outside Transfer Sequence]

- **Call Transfer to Outside Sequence**
Specifies the sequence the VPS uses to transfer calls to trunks (CO lines).
- **Call Transfer to Outside Reconnect Sequence on Busy**
Specifies the sequence the VPS uses to reconnect the line when the transferred party is busy.
- **Call Transfer to Outside Reconnect Sequence on No Answer**
Specifies the sequence the VPS uses to reconnect the line when the transferred party does not answer.
- **Outside Transfer Answer Mode**
Specifies the answering method the VPS uses to recognize whether the destination party has answered the transferred trunk (CO line) call.

Sequences for Voice Mail Integration

Use the KX-TVA Maintenance Console software to program the following sequences using the sequence codes listed here.

PBX Type	T308/ T616	T1232/ KX-TA Series	T96	T336	TA1232 TD1232 TD816 TD308	TD500	TDA/ TAW Series	Other Manufacturers
Operator Transfer Sequence	FTX	FTX	FTX	FTX	FTX	FTX	FTX	FX
Extension Transfer Sequence	FTX	FTX	FTX	FTX	FTX	FTX	FTX	FX
Alternate Extension Transfer Sequence	FTX	FTX	FTX	FTX	FTX	FTX	FTX	FX
Reconnect Sequence on Busy	FWW	FWW	FWW	FWW	FWW	FWW	FWW	FWW
Reconnect Sequence on No Answer	FWW	FWW	FWW	FWW	FWW	FWW	FWW	FWW
Reconnect Sequence on Refuse Call	FWW	FWW	FWW	FWW	FWW	FWW	FWW	FWW
Light-On Sequence for Message Waiting Lamp	N/A	T701X#	T#91X	T*9X	T701X	T701X	T*701X	*
Light-Off Sequence for Message Waiting Lamp	N/A	T702X#	T#90X	T#9X	T700X	T700X	T*700X	*
Call Waiting Sequence	N/A	2	N/A	N/A	1	1	1	*
Release Sequence for Call Waiting	N/A	F	N/A	N/A	F	F	F	*

* Check with manufacturer.

N/A Not Available

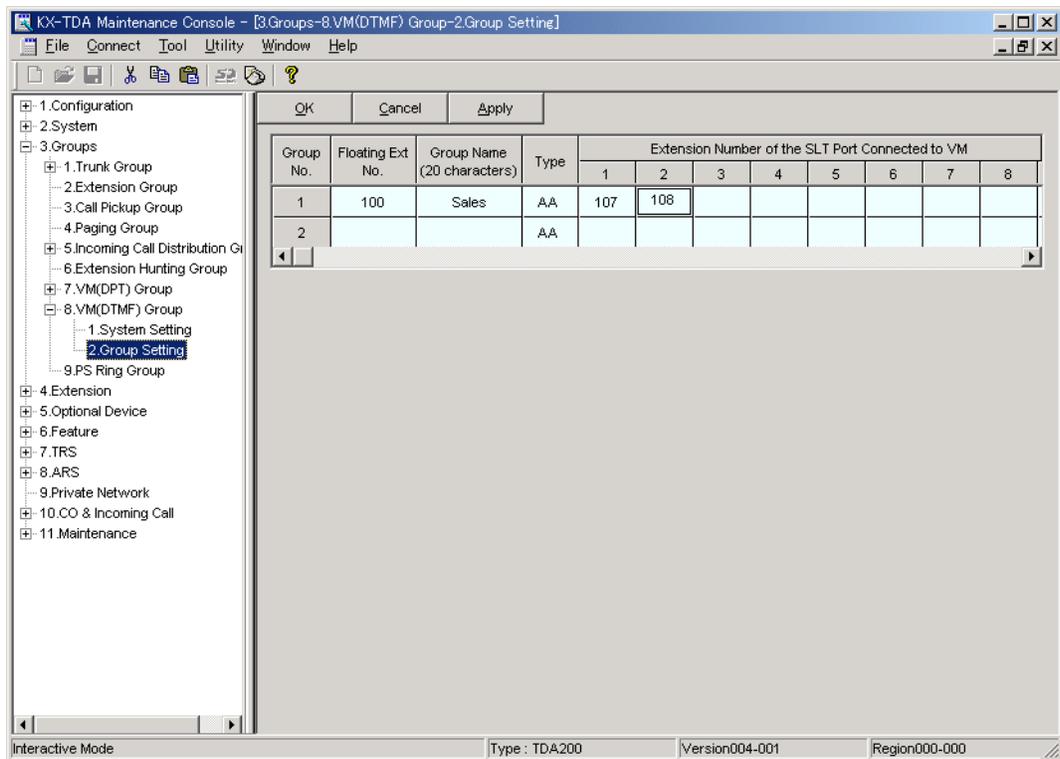

The remainder of this section consists of step-by-step guides for software verification and programming for select Panasonic PBX systems.

5.3 KX-TDA and KX-TAW Series PBX Programming for Inband Integration

DPT Integration is recommended when using the VPS with a KX-TDA or KX-TAW series PBX, however, Inband Integration is necessary when the PBX has available SLT ports but no available DPT ports.

The screen shots shown in this section are for the KX-TDA200. Programming procedures and availability may vary by PBX model, software version, etc. Refer to the documentation included with the PBX or consult your dealer for more information.

1. Assignment of VM (DTMF) Group
 - a) Go to the "Groups-VM(DTMF) Group-Group Setting" screen.
 - b) Assign a floating extension number to the desired VM (DTMF) group.
 - c) Select AA as the service type.
 - d) Assign extension numbers to "Extension Number of the SLT Port connected to VM". Incoming calls will hunt starting at the lowest VM Port number.
 - e) Click "Apply" to save the changed data.

2. Settings for the trunk (CO line) features

Select the appropriate trunk (CO line) feature settings depending on how your customer plans to use the VPS.

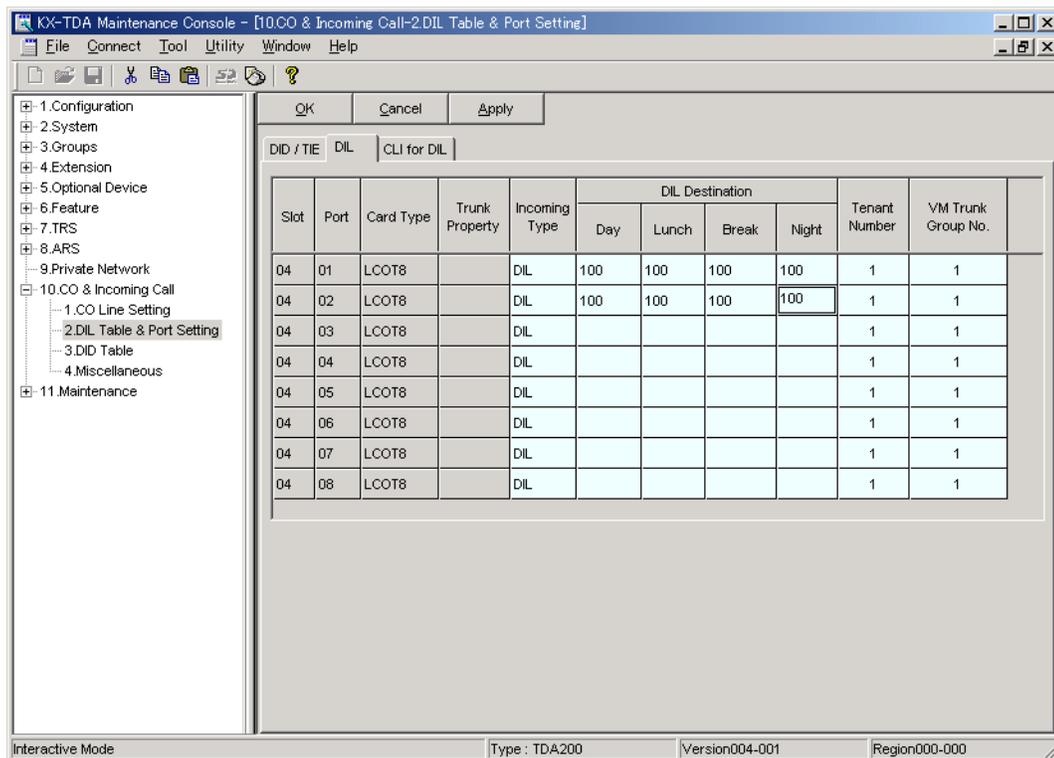

- The VPS answers all incoming trunk (CO line) calls promptly.
Go to [Example Settings (1)].
- The VPS answers when the operator does not take the call after a specified time.
Go to [Example Settings (2)].
- The VPS answers when an Incoming Call Distribution (ICD) group does not take the call after a specified time.
Go to [Example Settings (3)].

[Example Settings (1)]

Program the PBX so that all trunk (CO line) calls are directed to the VPS (DIL feature).

- 1) Go to the "CO & Incoming Call-DIL Table & Port Setting" screen.
- 2) Assign "DIL Destination Day/Night/Lunch/Break" for each trunk (CO line) to a floating extension number (VPS Port).
- 3) Click "Apply" to save the changed data.

Calls received on the assigned trunks (CO lines) will be directed to the VPS. The VPS will answer those calls using the service (AA, VM, Custom Service, etc.) assigned to each VPS port through VPS programming.

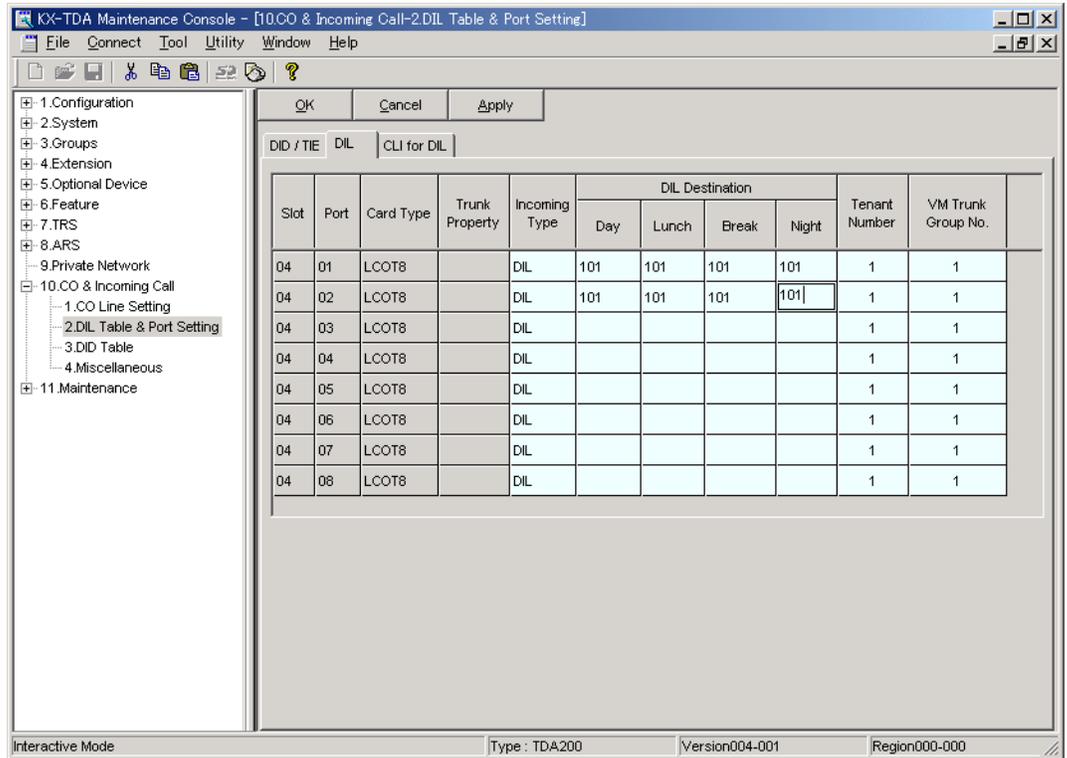

Note

- The above screen output appears only when all the trunk (CO line) cards mounted on your PBX are LCOT8 cards.

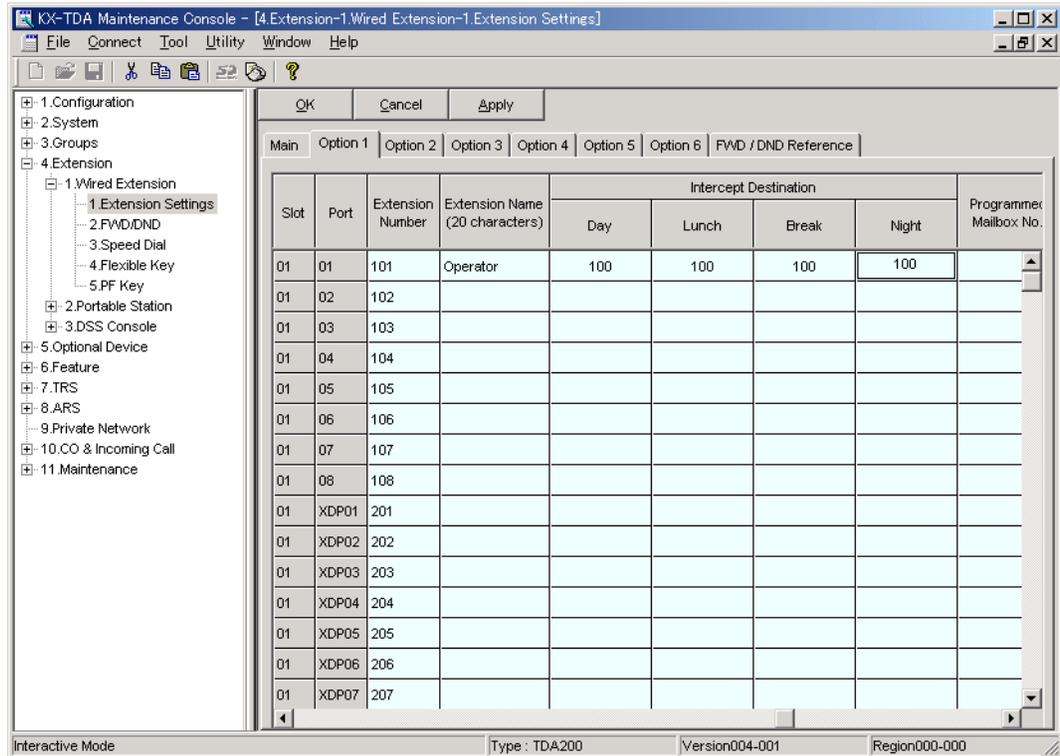

[Example Settings (2)]

Program the PBX to direct incoming trunk (CO line) calls to an operator, and to then direct those calls to the VPS when the operator does not answer.

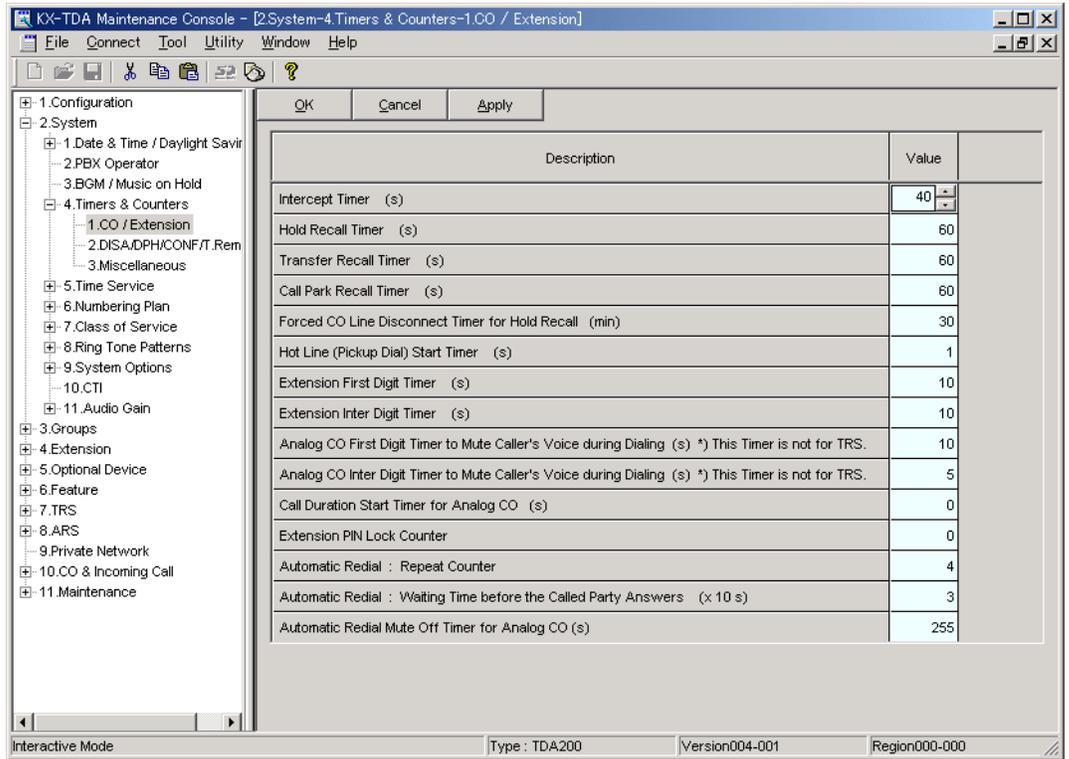

- a) Program the PBX so that incoming trunk (CO line) calls are directed to an operator (DIL feature).
 - 1) Go to the "CO & Incoming Call-DIL Table & Port Setting" screen.
 - 2) Assign "DIL Destination Day/Night/Lunch/Break" for each trunk (CO line) to a specific extension number (operator extension).
 - 3) Click "Apply" to save the changed data.

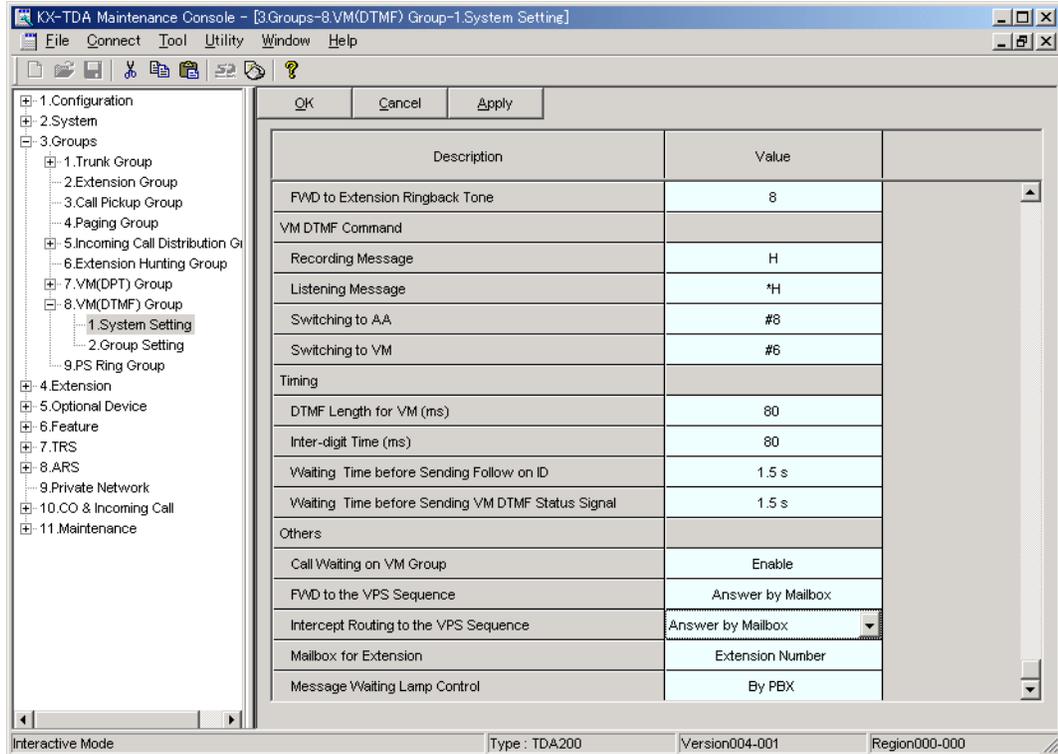

- b) Program the PBX so that unanswered calls to the operator are redirected to the VPS (Intercept Routing No Answer feature).
- 1) Go to the "Extension-Wired Extension-Extension Settings" screen.
 - 2) Assign "Intercept Destination Day/Night/Lunch/Break" for the operator's extension to a floating extension number (VPS Port).
 - 3) Click "Apply" to save the changed data.

- c) Set the amount of time that passes before a call is considered "unanswered" and therefore forwarded to the VPS (Intercept Routing No Answer timer).
- 1) Go to the "System-Timers & Counters-CO / Extension" screen.
 - 2) Assign the "Intercept Timer" parameter.
 - 3) Click "Apply" to save the changed data.

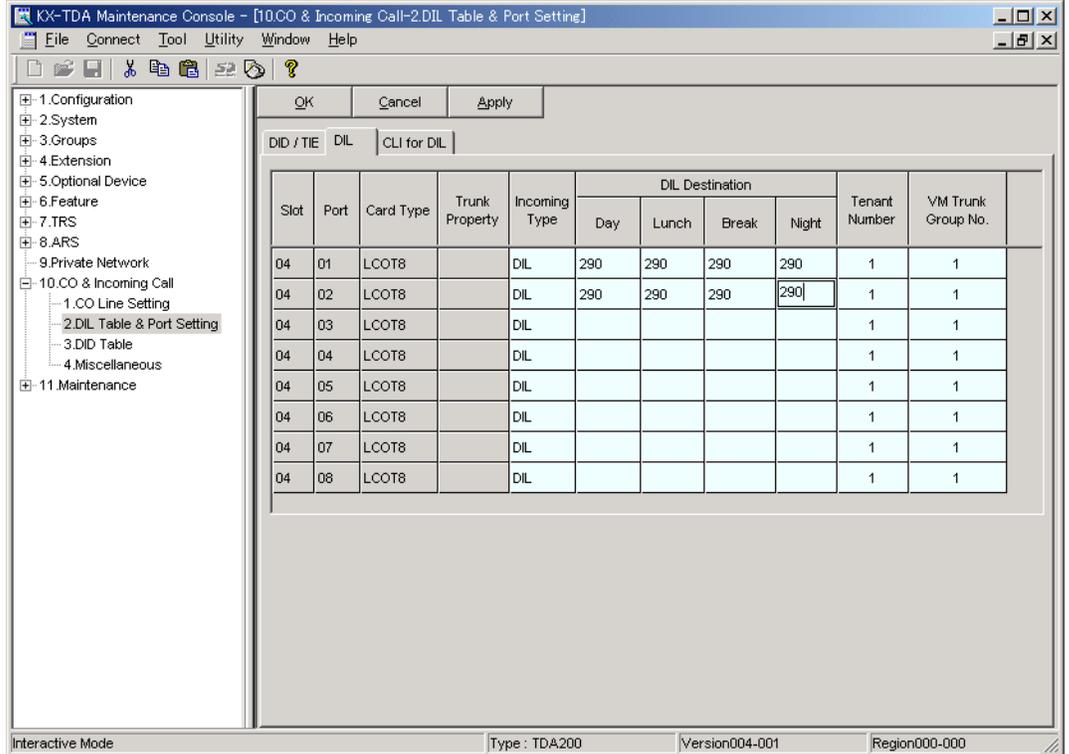

- d) Program the PBX so that it will direct intercepted calls to the VPS.
- 1) Go to the "Groups-VM (DTMF) Group-System Setting" screen.
 - 2) Select "None", "Answer by Mailbox", or "AA" as the parameter for "Intercept Routing to the VPS Sequence".
 This parameter determines which DTMF command the PBX will send to the VPS in order to select the desired service (AA, VM, Custom Service, etc.). If using a Custom Service, select "None".
 - 3) Click "Apply" to save the changed data.

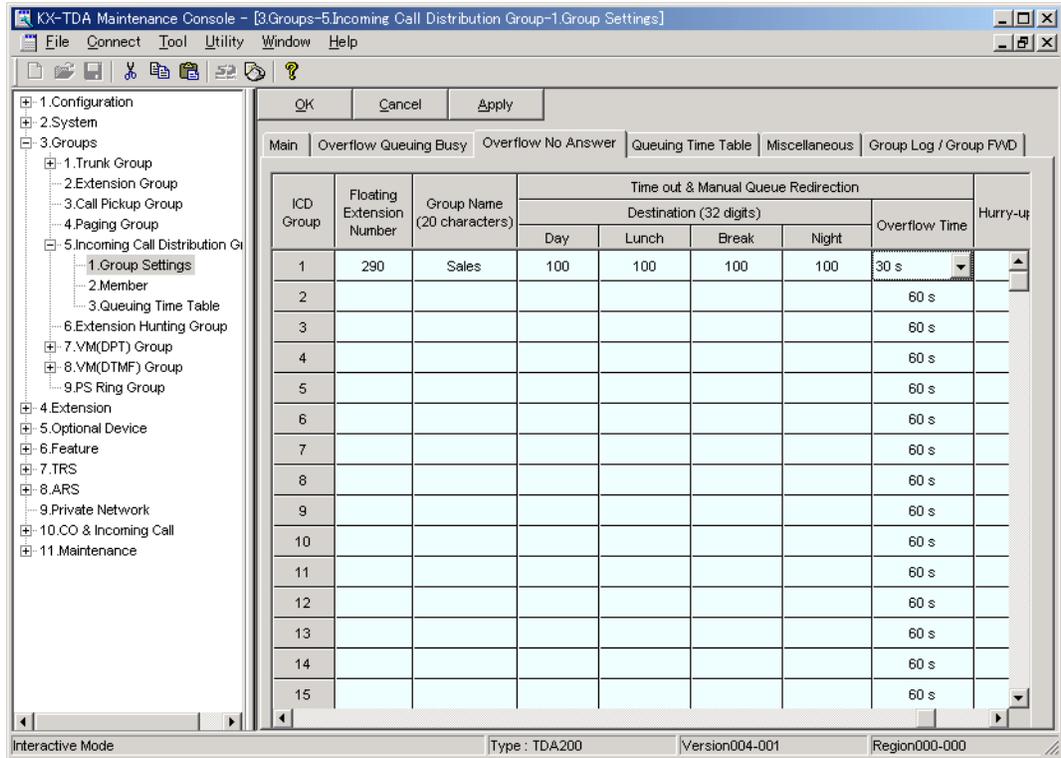

[Example Settings (3)]

Program the PBX to direct incoming trunk (CO line) calls to an Incoming Call Distribution (ICD) group, and to then direct those calls to the VPS when they are not answered.

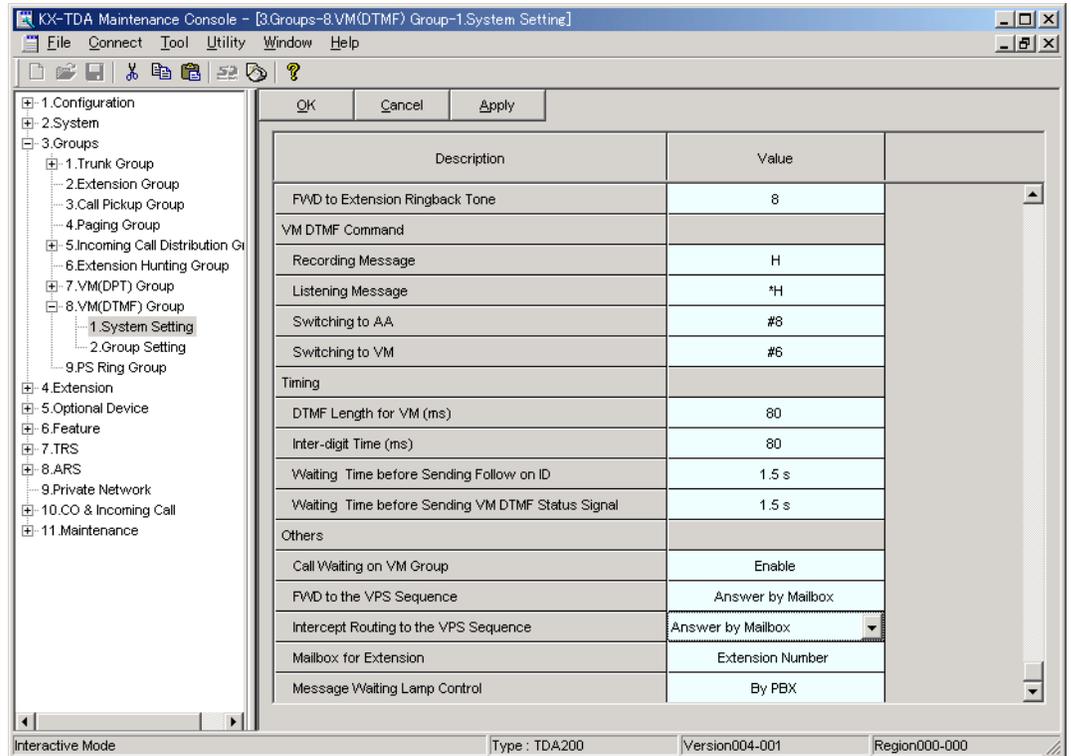

- a) Program the PBX so that incoming trunk (CO line) calls are directed to an ICD group (DIL feature).
 - 1) Go to the "CO & Incoming Call-DIL Table & Port Setting" screen.
 - 2) Assign "DIL Destination Day/Night/Lunch/Break" for each trunk (CO line) to a specific extension number (floating extension number of the ICD group).
 - 3) Click "Apply" to save the changed data.

- b) Program the PBX so that unanswered calls to the ICD group are redirected to the VPS (ICD Group Overflow feature).
- 1) Go to the "Groups-Incoming Call Distribution Group-Group Settings" screen.
 - 2) Assign "Time out & Manual Queue Redirection-Destination" for the ICD group to a floating extension number (VPS Port).
 - 3) Assign "Overflow Time" parameter.
 - 4) Click "Apply" to save the changed data.

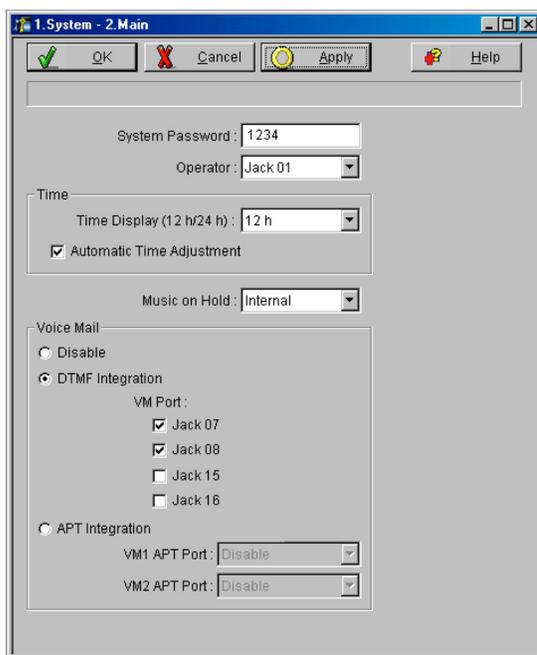

- c) Program the PBX so that it will direct overflowed calls to the VPS.
- 1) Go to the "Groups-VM (DTMF) Group-System Setting" screen.
 - 2) Select "None", "Answer by Mailbox", or "AA" as the parameter for "Intercept Routing to the VPS Sequence".
 This parameter determines which DTMF command the PBX will send to the VPS in order to select the desired service (AA, VM, Custom Service, etc.). If using a Custom Service, select "None".
 - 3) Click "Apply" to save the changed data.

5.4 KX-TA824 PBX Programming for Inband Integration

The instructions in this section are for programming a KX-TA824 via the Operating and Maintenance Tool. To program a KX-TA824 using the Manager Extension, follow the instructions for KX-TA series PBX programming by referring to 5.7 KX-TA Series PBX Programming for Inband Integration.

1. Go to the "1.System-2.Main" screen.
2. Under "Voice Mail", select "DTMF Integration", then select each extension jack that is connected to the VPS. Click "Apply" to save the changed data.

3. Go to the "2.Extension-6.Extension Group" screen.
4. Put all extensions connected to the VPS into the same extension group.
Reserve this extension group for these extensions! Do not mix other extensions into this group.
5. Set the hunting type for the VPS extension groups to "Circular". Click "Apply" to save the changed data.

2.Extension - 6.Extension Group

OK Cancel Apply Help

Jack	Extension	Group No.	Jack	Extension	Group No.

24	124	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Log-in	<input type="checkbox"/>	---	<input type="checkbox"/>	<input type="checkbox"/>	

- Select the appropriate trunk (CO line) feature settings depending on how your customer plans to use the VPS: a) to answer all incoming calls, b) as an operator backup, or c) to only answer calls not answered by user extensions.

Example trunk (CO line) feature settings:

- If the VPS is answering all calls:

Go to the "3.CO-1.Line Mode" screen. Program all lines DIL to the first extension of the Voice Mail hunt group. The PBX will allow incoming trunk (CO line) calls to hunt only if the trunks (CO lines) are DIL to the first port of the hunt group. Lines programmed as "Normal" do not hunt. Click "Apply" to save the changed data.

CO	Mode of incoming CO calls					
	Day		Night		Lunch	
	type	detail	type	detail	type	detail
1	DIL	Jack 07 [Extension 107]	DIL	Jack 07 [Extension 107]	DIL	Jack 07 [Extension 107]
2	DIL	Jack 07 [Extension 107]	DIL	Jack 07 [Extension 107]	DIL	Jack 07 [Extension 107]

- b) If the VPS is only answering calls not answered by the operator (Operator Backup):
 Go to the "3.CO-2.Incoming / Outgoing" screen. Program lines to ring operator extensions immediately for all time modes. To give the operator (extension 101 in this example) time to answer the call before the VPS picks up, we recommend setting the delay to a few seconds for each extension connected to the VPS. Set a different delay time for each extension connected to the VPS. Finally, go to the "3.CO-1.Line Mode" screen and set all trunk (CO line) types to "Normal". Click "Apply" to save the changed data.

5.5 KX-TD Series PBX Programming for Inband Integration

For KX-TD500 programming, refer to 5.6 KX-TD500 PBX Programming for Inband Integration. DPT Integration is recommended when using the VPS with the KX-TA1232, KX-TD816, or KX-TD1232, however, Inband Integration is necessary when the software version of the PBX does not support DPT Integration.

Programming procedures and availability may vary by PBX model, software version, etc. Refer to the documentation included with the PBX or consult your dealer for more information.

5.5.1 KX-TD Series PBX Programming via the Manager's Extension

For KX-TD500 programming, refer to 5.6 KX-TD500 PBX Programming for Inband Integration. Select a maximum of 2 extension ports to be connected to the VPS. Plug each extension into a Voice Mail port.

Go to System Program [602] and assign the Voice Mail extensions to a different extension group. By default, all extensions are in Extension Group 1.

Go to System Program [106] and assign the new Extension Group to Auto Attendant (AA).

5.5.2 KX-TD Series PBX Programming via the Operating and Maintenance Tool

For KX-TD500 programming, refer to 5.6 KX-TD500 PBX Programming for Inband Integration.

1. **Go** to the *Main Menu*. Choose "**System Data Programming**".

(BATCH [1] or INTERACTIVE [2]).

- *Before choosing Batch Programming, you must open a file in the Disk File Management Menu (Item 3).*
- *Before choosing Interactive Programming, you must connect with the system in the DSHS Connect/Disconnect menu.*

Main Menu

1. System Data Programming (BATCH)
2. System Data Programming (INTERACTIVE)
3. Disk File Management
4. DSHS Management
5. DSHS Connect/Disconnect
6. Quit

Select the number : []

2. **Choose "Station"** from the *System Data Programming Main Menu*.
3. **Choose "Station Setting" or "Station Setting 1"** from the *Station Menu*.
4. **Enable XDP** ports. Additionally, you may need to place Voice Mail extensions in an Extension Group.
5. **Return** to the *System Data Programming Main Menu*. **Select "System"**.
6. **Choose "Miscellaneous"** from the *System Menu*.
7. **Choose** the **"Call Hunting"** extension group. **Set** the Extension Group set in step 4 to **[A]** for Automated Attendant.
8.
 - a) **Return** to the *System Data Programming Main Menu*. **Select "Line"**, then **select "CO Line Setting 1"**.
 - b) Program all lines DIL to the first extension of the Voice Mail hunt group.

5.6 KX-TD500 PBX Programming for Inband Integration

DPT Integration is recommended when using the VPS with the KX-TD500, however, Inband Integration is necessary when:

- the PBX has available SLT ports but no available DPT ports.
- the cards installed in the PBX or the software version of the PBX do not support DPT Integration.

Programming procedures and availability may vary by PBX model, software version, etc. Refer to the documentation included with the PBX or consult your dealer for more information.

1. Assignment of the extension card to be connected to the VPS

Note

- If the VPS card to which the VPS will be assigned is already installed in the KX-TD500, skip the steps a through d. If a new VPS card is installed in the KX-TD500, follow the steps below.
 - Go to the "1-1 Slot Assignment" screen.**
 - Assign** the slot card type to be installed to "DHLC", "HLC", "SLC", "ESLC", or "SLC-M" SLT interface supports.
 - Click "Apply"** to save the slot card type assignment.
 - Set "Card Status"** to "INS".

Basic Shelf			Expansion Shelf 1			Expansion Shelf 2		
Slot No.	Card Type	Status	Card Type	Status	Card Type	Status		
1	DHLC	INS						
2								
3								
4	DHLC	INS						
5								
6	ELCOT	INS						
7	DLC	INS						
8								
9								
10								
11								
12								
13	CPU							
14	TSW							

2. Assignment of the extension ports to be connected to the VPS
 - a) Go to the "1-3 Extension Port Assignment" screen.
 - b) Assign "Attribute" of the port to be connected to "TEL" (default).
 - c) Assign "DN" for the port (click "DN Refer" to check the available directory numbers).

Note

- This program allows you to assign an extension number to each Voice Mail port. To reach the Voice Mail system, users dial these extension numbers.

- d) Assign "Extension Group No." for the port.

Note

- Specify the extension group number (126 or 127 by default) to which VM or AA extension groups have been assigned. Group numbers 1 to 128 are available to the VPS through additional programming.

- e) Click "Apply" to save the changed data.
- f) Set "Port Status" to "INS".

Port No.	Attribute	Tel. Type	DN	Group No.	Parallel / XDP	Status
1	TEL	T7235	1001	128	Parallel	INS
2	TEL	T7420	1002	1	Parallel	INS
3	TEL	T7235	1003	1	Parallel	INS
4	TEL	T7436	1004	1	Parallel	INS
5	TEL	Unknown	1005	126	Parallel	INS
6	TEL	Unknown	1006	126	Parallel	INS
7	TEL	Unknown	1007	126	Parallel	INS
8	TEL	T7230	1008	1	Parallel	INS

3. Assignment of the extension line to be connected to the VPS
 - a) Go to the "4-2 Extension Line" screen.
 - b) Set "Data Line Mode" to "Yes".
 - c) Click "Apply" to save the changed data.

Note

- This program prevents the VM port from being interrupted by "Call Waiting", "Hold Recall", and "Executive Busy Override" features during a call.

The screenshot shows the "4-2 Extension Line" configuration window with the following fields and controls:

- Card No.:** 101:DHLC (dropdown)
- Port No.:** 5 (dropdown)
- DN:** 1005 (text field)

- 4-2 Extension Line** (dropdown)
- OK** (button), **Apply** (button), **Cancel** (button), **Help** (button)

4. Settings for the trunk (CO line) features

Select the appropriate trunk (CO line) feature settings depending on how your customer plans to use the VPS.

- The VPS answers all incoming outside calls promptly.
Go to [Recommended Settings (1)].
- The VPS answers when the operator does not take the call after a specified number of rings.
Go to [Recommended Settings (2)].
- The VPS answers when an extension user does not take the call after a specified number of rings.
Go to [Recommended Settings (3)].

[Recommended Settings (1)]

Program the PBX so that all trunk (CO line) calls are directed to the VPS (DIL feature).

a) Assignment of DIL 1:1 line

- 1) Go to the "4-1 Trunk Line" screen.
- 2) Assign "Destination Day/Night/Lunch/Break" for each trunk (CO line) to a specific extension number (VPS port).
- 3) Click "Apply" to save the changed data.

Note

- Specify the FDN for the extension group to which VM or AA has been assigned. In order to utilize the Caller ID features, you must Set "Caller ID" to "Enable".

[Recommended Settings (2)]

Program the PBX to direct incoming trunk (CO line) calls to an operator, and to then direct those calls to the VPS when the operator does not answer.

- a) Program the PBX so that incoming trunk (CO line) calls are directed to an operator (DIL feature).
 - 1) Go to the "4-1 Trunk Line" screen.
 - 2) Assign "Destination Day/Night/Lunch/Break" for each trunk (CO line) to a specific extension number.
 - 3) Click "Apply" to save the changed data.

Note

- Specify the FDN for the extension group to which Operator has been assigned.

The screenshot shows the '4-1 Trunk Line' configuration window. The settings are as follows:

- Card No.: 106:ELCOT
- Port No.: 1
- Group No.: 1
- Name: CO001
- Incoming Type: DIL
- Dial Type: DTMF-80
- Destination: Day 1001, Night 1001, Lunch 1001, Break 1001
- DID/TIE: Digits to delete: 0, Number to be added: [Max. 8 Digits], Digit to receive DID: 4
- Wink Signal Time-out: 1024 ms
- Start Signal Type: Wink
- CPC Signal:
 - OUT Detection: Disable
 - IN Detection: Enable
 - Detection Time: 400 ms
- Caller ID: Enable
- Answer Wait Timer: None
- TIE Line: [Empty]
- TIE-to-CO Security Mode: No
- Sending TIE Caller ID: No

b) Program the PBX so that unanswered calls to the operator are redirected to the VPS (Intercept Routing No Answer feature).

- 1) Go to the "3-1 Trunk Group" screen.
- 2) Assign "Intercept Destination Day/Night" for the trunk (CO line) group.
- 3) Click "Apply" to save the changed data.

Note

- Specify the FDN for the extension group to which VM or AA has been assigned.

The screenshot shows the '3-1 Trunk Group' configuration window. The 'Group No.' is set to 1. Under 'Intercept Destination', 'Day' is 1005 and 'Night' is 1005. 'Pause Time before Flash Signal' is 512 ms and 'Max. Dial No. after EFA Signal' is 0. 'Line Hunting Order' is Normal, 'Tenant No.' is 1, and 'Flash Time' is 600 ms. 'Disconnecting Time' and 'Pause Time' are both 1.5 s. 'PBX Access Code' has four empty input boxes. 'PBX Dial Tone' and 'PBX Ringback Tone' are both set to 'Disable'. There are three checked checkboxes: 'Cyclic Signal Detection', 'Continuous Signal Detection', and 'Silence Detection'. At the bottom, there are 'OK', 'Apply', 'Cancel', and 'Help' buttons, and a dropdown menu showing '3-1 Trunk Group'.

- c) Set the number of rings before a call is considered "unanswered" and therefore forwarded to the VPS (Intercept Routing No Answer timer).
- 1) Go to the "2-4 System Timer 1/2" screen.
 - 2) Assign "Intercept Time" parameter.
 - 3) Click "Apply" to save the changed data.

2-4 System Timer 1/2

Hold Recall Time (0-240 s)	50 s	Call Forwarding - No Answer Time (1-12 rings)	3 ring(s)
Transfer Recall Time (0-48 rings)	12 ring(s)	Extension-to-CO line Call Duration Time (1-64 min)	10 min
Pickup Dial Waiting Time (1-5 s)	1 s	CO-to-CO Line Call Duration Time (1-64 min)	10 min
Call Duration Count Start Time (0-60 s)	0 s		
First Digit Time (5-120 s)	10 s		
Inter-digit Time (1-30 s)	5 s	Door Opener Timer (0-10 s)	5 s
Intercept Time (1-48 rings)	12 ring(s)		

2-4 System Timer 1/2

OK Apply Cancel Help

[Recommended Settings (3)]

Program the PBX to direct incoming trunk (CO line) calls to an extension or group and to then direct those calls to the VPS when they are not answered.

- a) Program the PBX so that incoming trunk calls are directed to an extension or group (DIL feature).
 - 1) Go to the "4-1 Trunk Line" screen.
 - 2) Assign "Destination Day/Night/Lunch/Break" for each trunk (CO line) to a specific extension number.
 - 3) Click "Apply" to save the changed data.

- b) Program the PBX so that unanswered calls are redirected to the VPS (Intercept Routing No Answer feature).
- 1) Go to the "3-1 Trunk Group" screen.
 - 2) Assign "Intercept Destination Day/Night" for the trunk (CO line) group.
 - 3) Click "Apply" to save the changed data.

Note

- Specify the FDN for the extension group to which VM or AA has been assigned.

The screenshot shows the '3-1 Trunk Group' configuration window. The window title is '3-1 Trunk Group'. The 'Group No.' is set to '1'. There is a 'Copy' button. The 'Intercept Destination' section has 'Day' and 'Night' both set to '1005'. 'Pause Time before Flash Signal' is '512 ms' and 'Max. Dial No. after EFA Signal' is '0'. 'Line Hunting Order' is 'Normal', 'Tenant No.' is '1', and 'Flash Time' is '600 ms'. 'Disconnecting Time' is '1.5 s' and 'Pause Time' is '1.5 s'. 'PBX Access Code' has four empty input boxes. 'Numbering Plan ID' has 'Public' and 'Private' sections, each with 'Outgoing' and 'Incoming' dropdowns set to 'Default'. 'PBX Dial Tone' has 'Enable' and 'Disable' radio buttons, with 'Disable' selected. 'PBX Ringback Tone' has 'Enable' and 'Disable' radio buttons, with 'Disable' selected. 'Type of Number' has 'Public' and 'Private' sections, each with 'Outgoing' and 'Incoming' dropdowns set to 'Default'. At the bottom, there are buttons for 'OK', 'Apply', 'Cancel', and 'Help', and a dropdown menu showing '3-1 Trunk Group'.

- c) Program the amount of time that passes before unanswered calls are redirected to the VPS (Intercept Routing No Answer timer).
 - 1) Go to the "2-4 System Timer 1/2" screen.
 - 2) Assign "Intercept Time" parameter.
 - 3) Click "Apply" to save the changed data.

The screenshot shows a configuration window titled "2-4 System Timer 1/2". It contains several input fields for different timer parameters:

- Hold Recall Time (0-240 s): 30 s
- Transfer Recall Time (0-48 rings): 12 ring(s)
- Pickup Dial Waiting Time (1-5 s): 1 s
- Call Duration Count Start Time (0-60 s): 0 s
- First Digit Time (5-120 s): 10 s
- Inter-digit Time (1-30 s): 5 s
- Intercept Time (1-48 rings): 12 ring(s)
- Call Forwarding - No Answer Time (1-12 rings): 3 ring(s)
- Extension-to-CO line Call Duration Time (1-64 min): 10 min
- CO-to-CO Line Call Duration Time (1-64 min): 10 min
- Door Opener Timer (0-10 s): 5 s

At the bottom, there is a dropdown menu set to "2-4 System Timer 1/2" and four buttons: "OK", "Apply", "Cancel", and "Help".

5.7 KX-TA Series PBX Programming for Inband Integration

Note

- The KX-TA824 can also be programmed via PC using the Operating and Maintenance Tool. Refer to 5.4 KX-TA824 PBX Programming for Inband Integration for more information.
- For KX-TA1232 programming, refer to 5.5 KX-TD Series PBX Programming for Inband Integration.

APT Integration is recommended when using the VPS with a KX-TA series PBX, however, Inband Integration is necessary when:

- the PBX has available SLT ports but no available APT ports.
- the software version of the KX-TA series PBX do not support APT Integration.

Note

- If the PBX is programmed to use 2-digit extension numbers, DTMF Integration is not possible. Program the PBX to use 3-digit extension numbers using System Program [009].

1. Enable System Program [102] for each extension connected to the VPS.

This parameter is used to tell the PBX which extensions are connected to the VPS. Ports with this parameter enabled can receive Follow-on ID and DTMF Signaling (busy, answered, disconnect, etc.) if the Voice Mail Integration and Touchtone Integration features are also enabled.

2. Enable System Program [103] to turn on DTMF Integration. On extensions with the Voice Mail port parameter enabled, the PBX can send DTMF signals to indicate call status; this increases VPS efficiency. Codes apply to all transferred calls; trunk (CO line) calls only indicate a disconnection (provided the PBX is programmed for CPC Detection, and the Telephone Company sends the CPC signal). Refer to the Sequence Codes in 5.2.3 PBX Interface Parameters.
3. Put all extensions connected to the VPS into the same extension group using System Program [600].

Reserve this extension group for these extensions! Do not mix other extensions into this group.

4. Enable hunting for the VPS extension groups using System Program [100].
5. Set the hunting type for the VPS extension groups to "Circular" using System Program [101].
6. At every VPS extension, temporarily connect an SLT or test set, go off-hook and dial 7301# to turn on Data Line Security. This prevents the PBX from sending Executive Override or Call Waiting tones to those extensions. We recommend that all Voice Mail port extensions have this feature enabled to avoid interruption during recording.
7. Select the appropriate trunk (CO line) feature settings depending on how your customer plans to use the VPS: a) to answer all incoming calls, b) as an operator backup, or c) to only answer calls

not answered by user extensions.

Recommended trunk (CO line) feature settings:

a) If the VPS is answering all incoming calls:

Trunk Mode—Use System Programs [414] (Day Mode), [415] (Night Mode), [416] (Lunch Mode) to set each trunk (CO line) to "DIL" mode, and assign the first extension of the Voice Mail hunt group as the destination for calls received on each trunk (CO line). The PBX will allow incoming trunk (CO line) calls to hunt only if the trunks (CO lines) are DIL to the first port of the hunt group. Lines programmed as "Normal" do not hunt.

b) If the VPS is only answering calls not answered by the operator (Operator Backup):

Flexible Ringing Assignment—For each trunk (CO line), use System Programs [408] (Day Mode), [409] (Night Mode), and [410] (Lunch Mode) to enable ringing at the operator's extension (jack).

Delayed Ringing Assignment—To give the operator time to answer the call before the VPS picks up, we recommend setting the delay to a few seconds for each extension connected to the VPS. Set a different delay time for each extension connected to the VPS. Use System Programs [411] (Day Mode), [412] (Night Mode), and [413] (Lunch Mode).

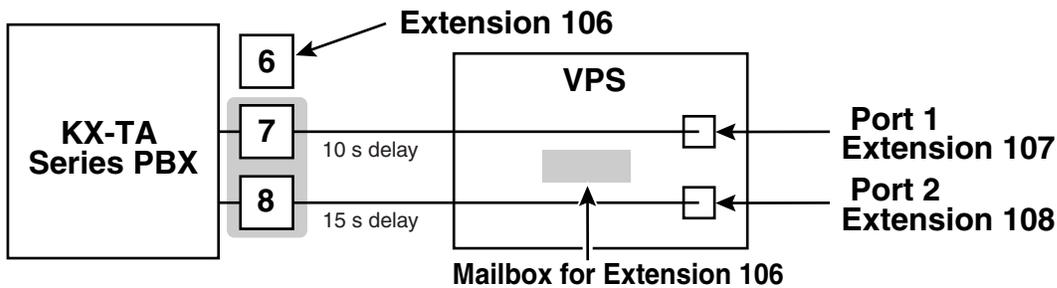

Trunk Mode—Set the mode for each trunk (CO line) to "Normal". Use System Programs [414] (Day Mode), [415] (Night Mode), and [416] (Lunch Mode) to set this parameter.

c) If the VPS is only answering calls not answered by user extensions:

Flexible Ringing Assignment—For each trunk (CO line), use System Programs [408] (Day Mode), [409] (Night Mode), and [410] (Lunch Mode) to enable ringing on every extension (jack) that you want to have ring.

Delayed Ringing Assignment—To give users time to answer the call before the VPS picks up, we recommend setting the delay to a few seconds for each extension connected to the VPS. Set a different delay time for each extension connected to the VPS. Use System Programs [411] (Day Mode), [412] (Night Mode), and [413] (Lunch Mode).

Trunk Mode—Set the mode for each trunk (CO line) to "Normal". Use System Programs [414] (Day Mode), [415] (Night Mode), and [416] (Lunch Mode) to set this parameter.

Section 6

Configuring the System

This section explains how to configure the VPS for basic operation.

6.1 Starting Up

6.1.1 Before Programming

Careful preparation before you begin programming the VPS will make the programming and customization process easier for you and the customer.

1. Determine the customer's needs.
 - Work with the owner/supervisor and Message Manager to build the Custom Service Greetings, Holiday Greetings, etc.
 - Decide which ports/trunks (CO lines) should be answered by which greetings.
 - Confirm the software level of the PBX to make sure it is compatible with the features the customer wishes to use.
2. While programming the VPS with KX-TVA Maintenance Console, make sure subscribers do not change any of their mailbox settings, otherwise programmed settings may not be saved properly.
3. Work with the Message Manager (perhaps a receptionist or supervisor) to make sure he or she understands the system as well as his or her responsibilities as the Message Manager. This will save you time in the long run.
 - Show the Message Manager how to record system greetings. Refer to 7.6 Recording Messages in the Subscriber's Manual.
 - Show the Message Manager how to transfer General Delivery Mailbox messages. Refer to 7.2 Managing the General Delivery Mailbox in the Subscriber's Manual.

6.1.2 Quick Setup

The Quick Setup utility allows you to set essential VPS parameters quickly and easily. It is particularly useful when configuring the VPS for the first time or after initializing the VPS.

The following settings can be programmed with the Quick Setup utility:

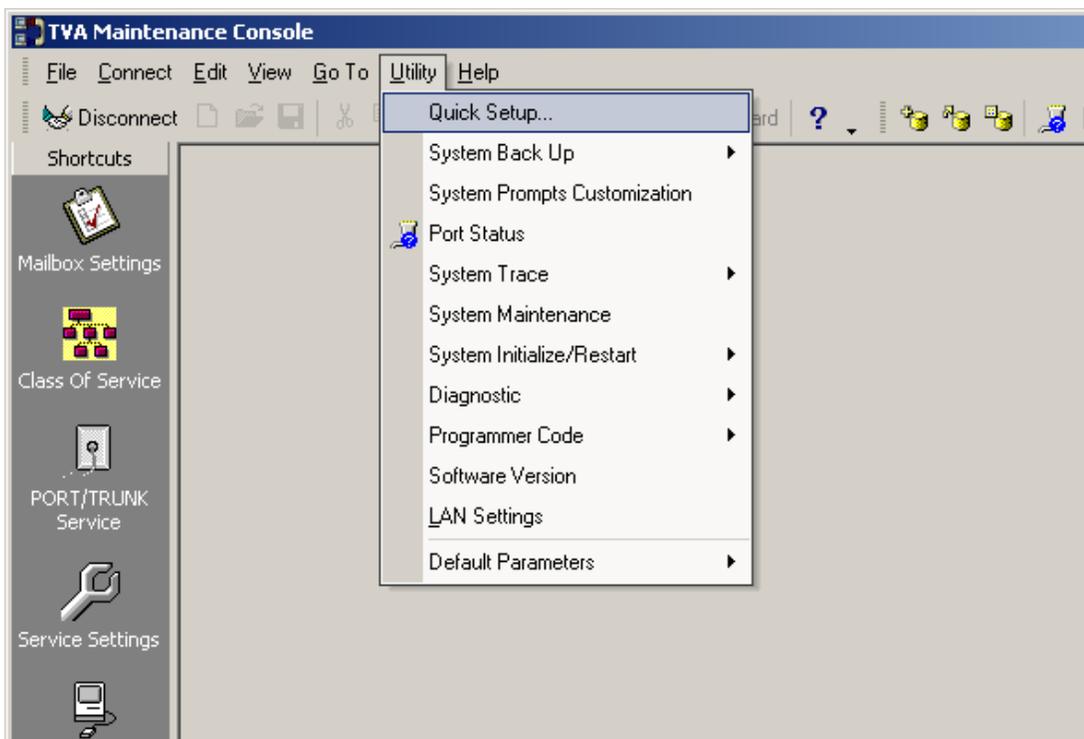

- System Security settings
- PBX Environment settings
- Mailbox settings
- Port/Trunk settings
- Date and Time setting

Note

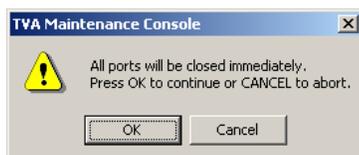

- Set the desired parameters in each screen then click "Next" or "Back" to go to the desired screen.
- Each screen of the Quick Setup utility must be completed in order for the settings to take effect.
- The screen shots in this section are examples of the KX-TVA200.
- Settings shown in the screen shots in this section are examples only and may vary depending on the type or settings of the connected PBX, the software version, etc.

Starting Quick Setup

1. Start KX-TVA Maintenance Console and connect to the VPS (refer to 3.3 Starting KX-TVA Maintenance Console).
2. Click "Utility → Quick Setup..." in the menu bar.

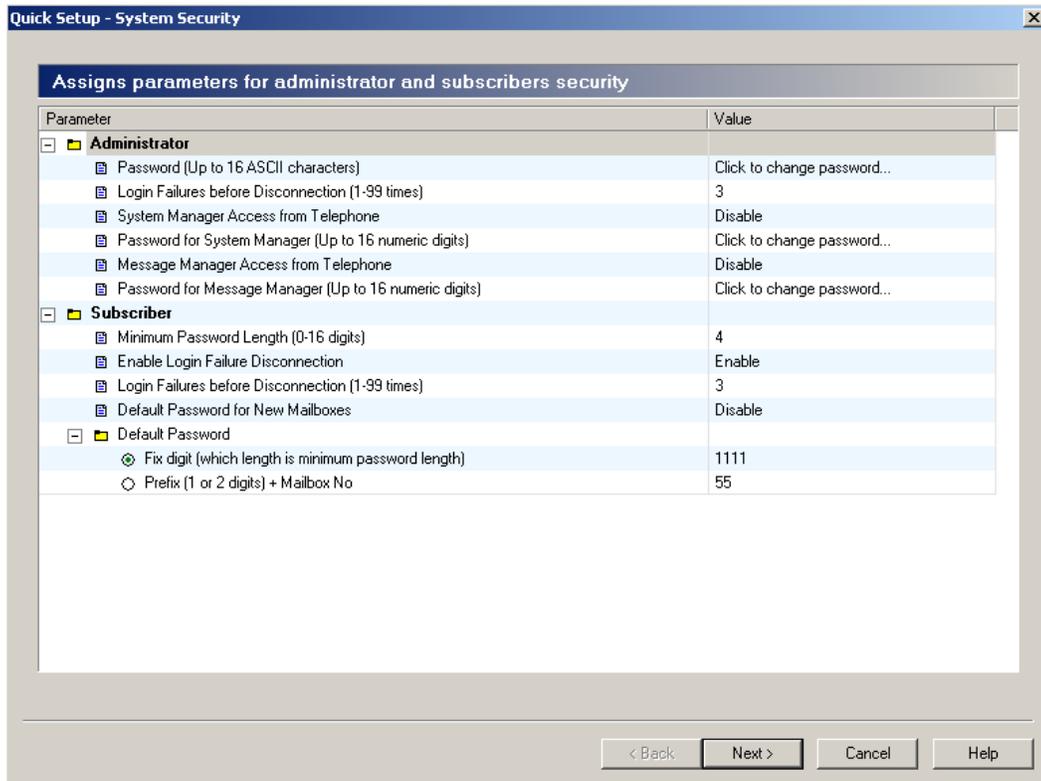

3. Click "OK" when the message is displayed.

Using Quick Setup

System Security settings

After you click "Quick Setup", the System Security window appears.

In this window, you can change the Administrator, System Manager, and Message Manager passwords, as well as other security-related settings. For more information, refer to 2.8 System Security in the Programming Manual.

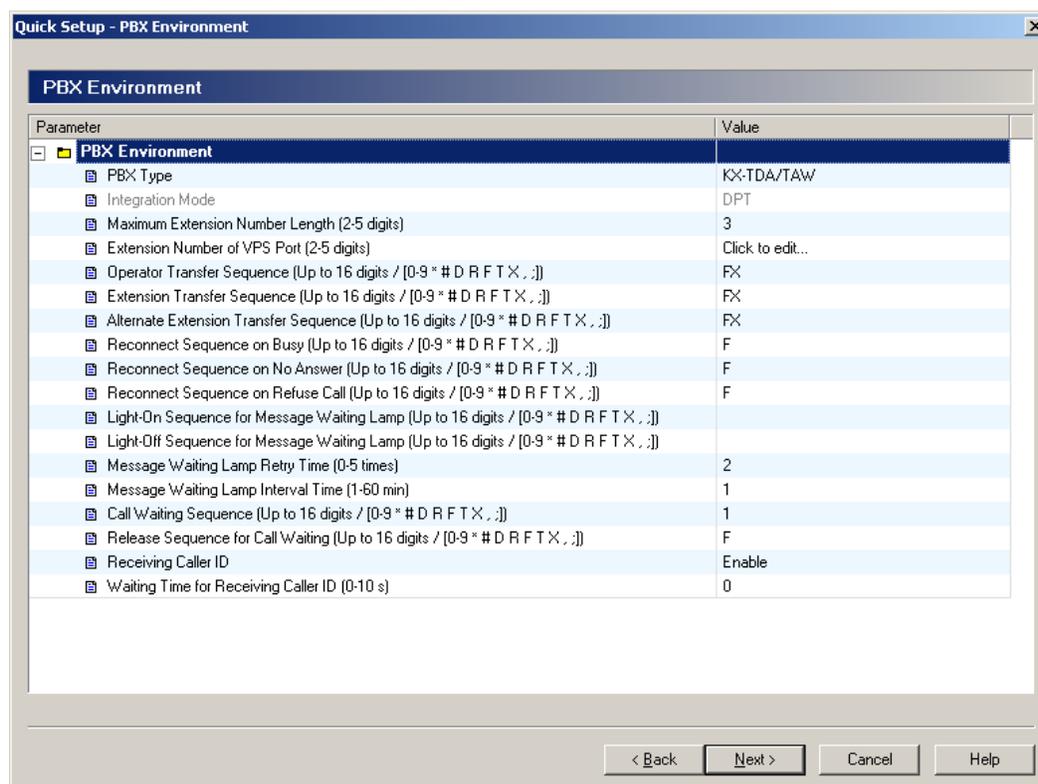

Edit each parameter as needed, then click "Next".

IMPORTANT

- **To prevent unauthorized access, we strongly recommend selecting a long and random password.**
- **Do not carelessly reveal the password to other persons.**
- **Please change the password periodically.**

PBX Environment settings

The next window displayed is the PBX Environment window.

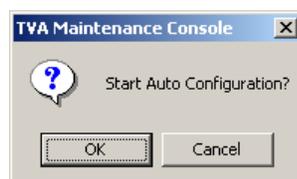

In this window, you can select the PBX Type, Integration Mode (KX-TVA50 only), and set other parameters essential for proper integration between the PBX and VPS. For more information, refer to "PBX Environment" in 2.5.4 Parameters in the Programming Manual.

Note

- The VPS will set the appropriate parameters to match the default settings of the PBX you select as the PBX Type.

Edit each parameter as needed, then click "Next". You will be asked whether you want to start Auto Configuration.

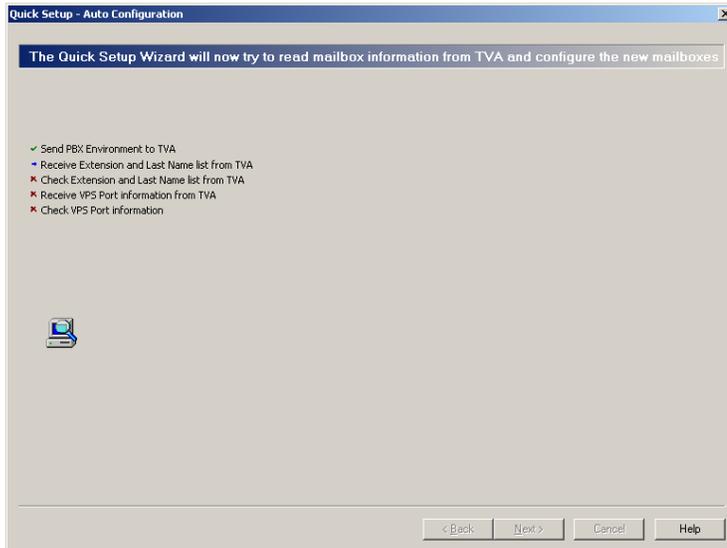

Click "OK" to start Auto Configuration (then continue from "If Auto Configuration is started" in this section) or "Cancel" to skip Auto Configuration (then continue from "If Auto Configuration is skipped" later in this section).

If Auto Configuration is started

Auto Configuration (available for APT/DPT Integration only) allows the PBX and VPS to exchange information and make the setup process easier. If you cannot use Auto Configuration or skip Auto Configuration, continue from "If Auto Configuration is skipped" later in this section.

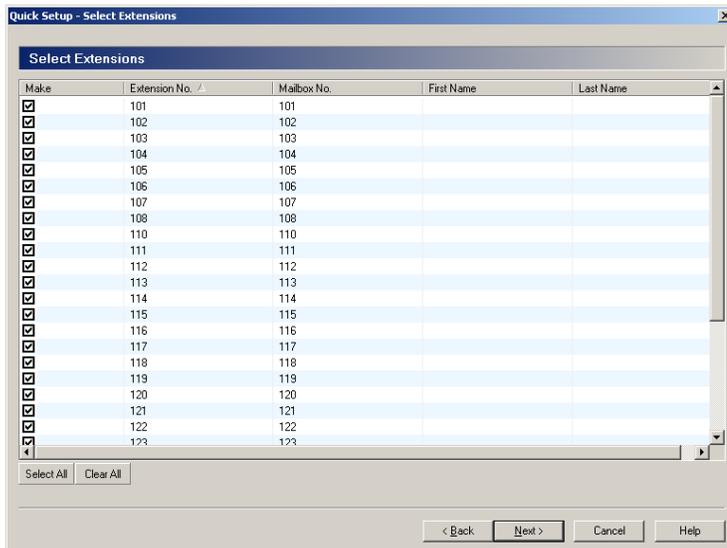

If you start Auto Configuration, the following screen will be displayed while data is exchanged between the PBX and VPS.

Click "Next" when the button becomes available.

Create mailboxes

The next window displayed is the Select Extensions window. Extension data retrieved from the PBX is displayed.

Select the extensions for which you would like to create mailboxes, then click "Next".

Note

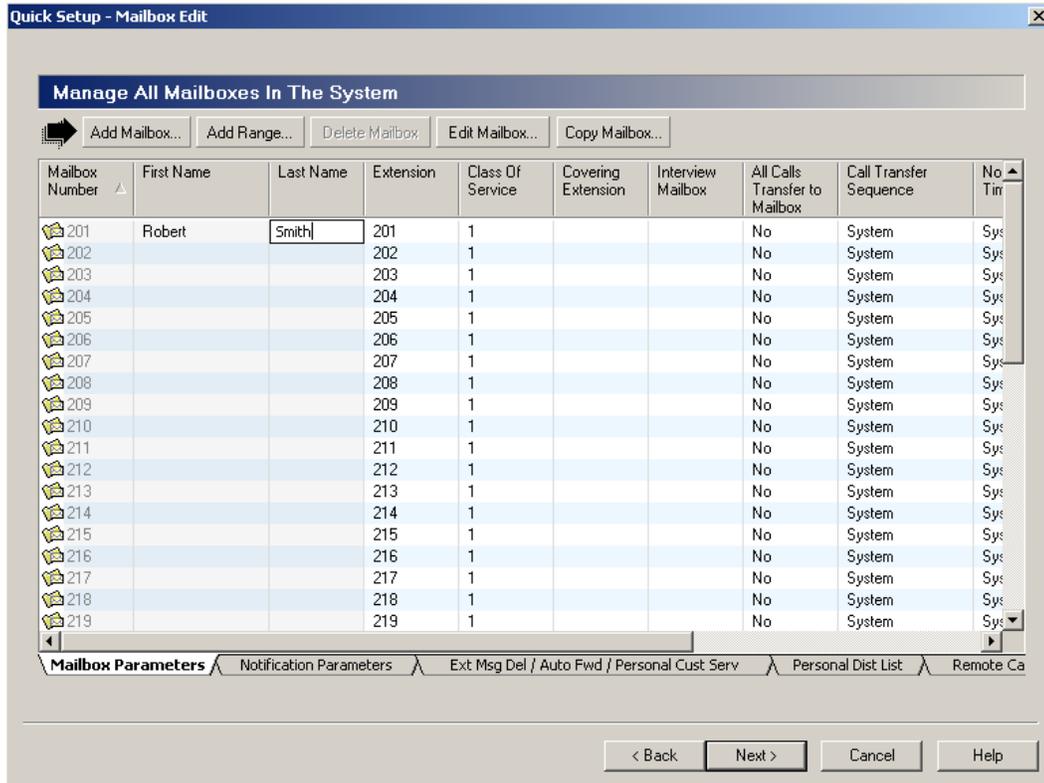

- Each extension name retrieved from the PBX is stored in the "Last Name" field of the respective subscriber's Mailbox Settings. Extension names can be retrieved from the following PBXs:
KX-TDA series PBXs (MPR version 2.0 or higher)
KX-TD500 with software production date code 040901 or later.
- Mailboxes will be created during Auto Configuration. The number of digits used for mailbox numbers is 2 to 5 digits, depending on PBX programming.
The Message Manager mailbox (General Delivery Mailbox) number will be 98, 998, 9998, or 99998.
The System Manager mailbox number will be 99, 999, 9999, or 99999.
If both 3-digit and 4-digit extension numbers are used by the PBX, the VPS will use 4-digit mailbox numbers. When creating mailbox numbers for 3-digit extensions, a "0" will be added to the end of each mailbox number.

Example:

Extension Numbers	Mailbox Numbers
201	2010
202	2020
203	2030
2000	2000
2001	2001
2002	2002

Mailbox settings

The next window displayed is the Mailbox Edit window.

Edit, delete, or add mailboxes as needed, then click "Next". For more information, refer to 2.1.3 Mailbox Parameters in the Programming Manual.

Note

- The Mailbox Edit window allows you to set basic mailbox parameters only. Detailed mailbox settings can be made after Quick Setup has finished, by clicking on the "Mailbox Settings" icon under "Shortcuts".

Port/Trunk settings

The next window displayed is the port/trunk (CO line), window.

Quick Setup - Port/Trunk

One of 8 service groups can be assigned to each VPS port and each PBX trunk (CO line)

Service Groups

- Service Group No. 1
- Service Group No. 2
- Service Group No. 3
- Service Group No. 4
- Service Group No. 5
- Service Group No. 6
- Service Group No. 7
- Service Group No. 8

Configure Service Groups for each port/trunk (CO line), then click "Next". For more information, refer to 2.3.1 Service Group in the Programming Manual.

Date and Time setting

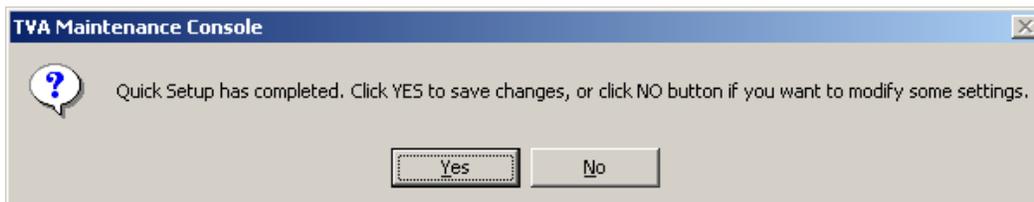

The last window displayed is the date and time setting window.

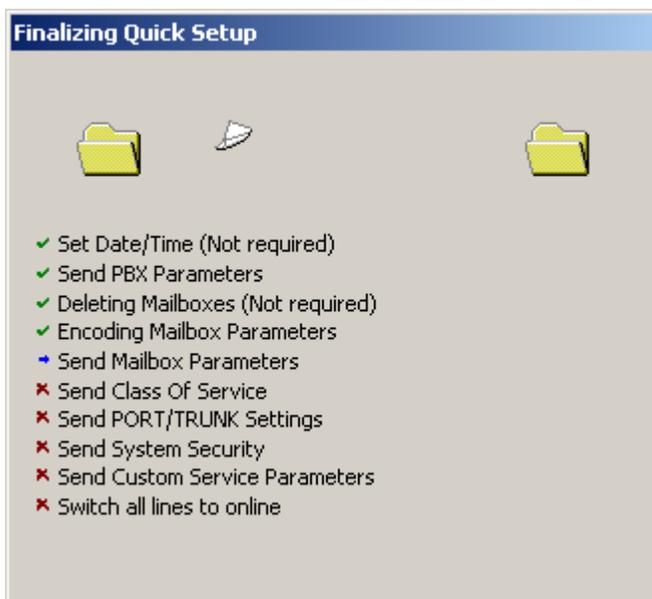

Set the date and time, then click "Finish".

Finalizing Quick Setup

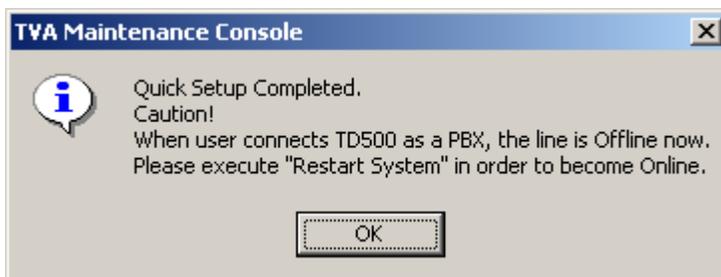

Click "Yes" to save the settings and finish Quick Setup. If you click "No", your settings will not be saved and you will return to the previous screen.

If you clicked "Yes", the following screen is displayed as your settings are saved.

When Quick Setup is completed, the following screen will be displayed.

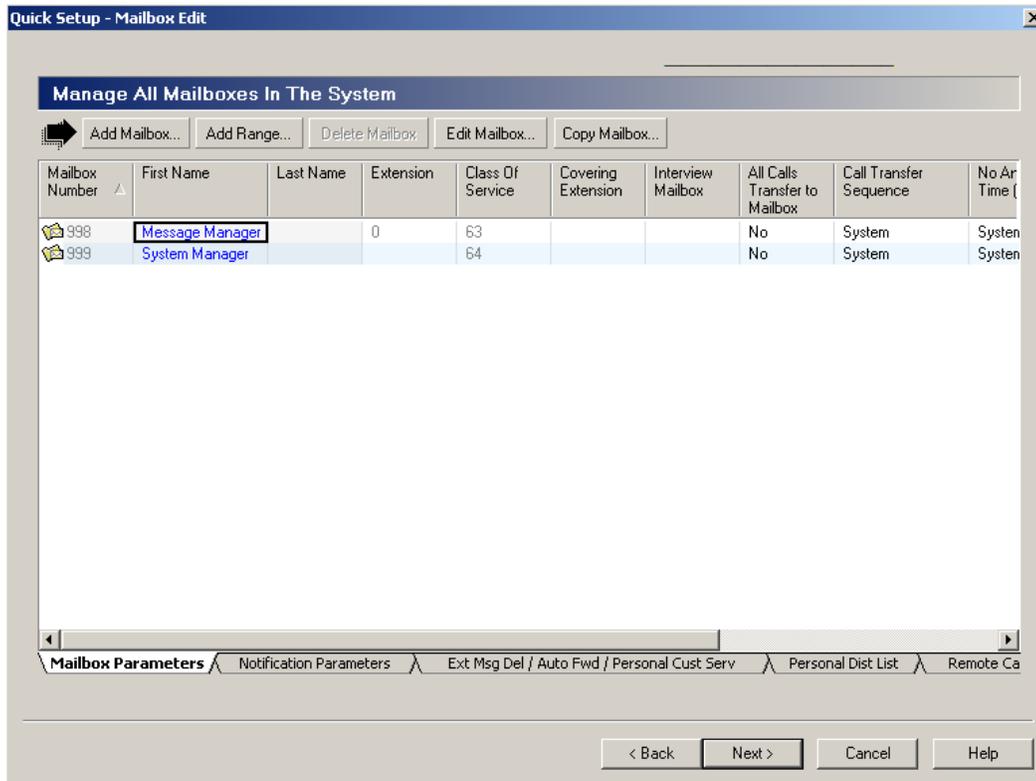

Note

- If the VPS is connected to a KX-TD500, restart the VPS to bring the VPS online.

If Auto Configuration is skipped

Mailbox settings

If you skip Auto Configuration, the next window displayed is the Mailbox Edit window.

Edit, delete, or add mailboxes as needed, then click "Next". For more information, refer to 2.1.3 Mailbox Parameters in the Programming Manual.

Note

- The Mailbox Edit window allows you to set basic mailbox parameters only. Detailed mailbox settings can be made after Quick Setup has finished, by clicking on the "Mailbox Settings" icon under "Shortcuts".

Port/Trunk settings

The next window displayed is the Port/Trunk window.

One of 8 service groups can be assigned to each VPS port and each PBX trunk (CO line)

Service Groups

- Service Group No. 1
- Service Group No. 2

The last window displayed is the date and time setting window.

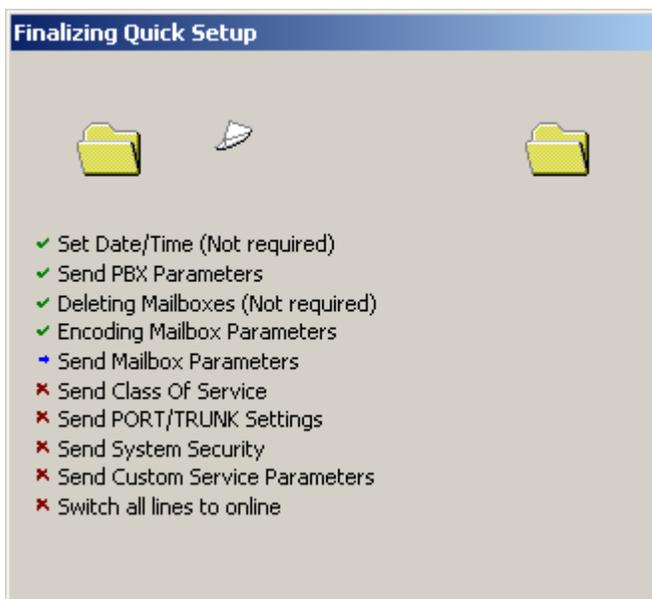

Set the date and time, then click "Finish".

Finalizing Quick Setup

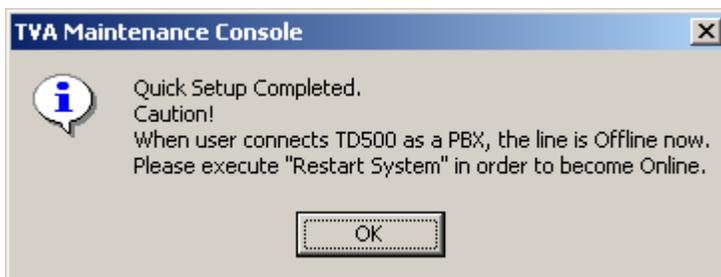

Click "Yes" to save the settings and finish Quick Setup. If you click "No", your settings will not be saved and you will return to the previous screen.

If you clicked "Yes", the following screen is displayed as your settings are saved.

When Quick Setup is completed, the following screen will be displayed.

Note

- If the VPS is connected to a KX-TD500, restart the VPS to bring the VPS online.

Section 7

System Maintenance

This section describes how to perform common maintenance procedures.

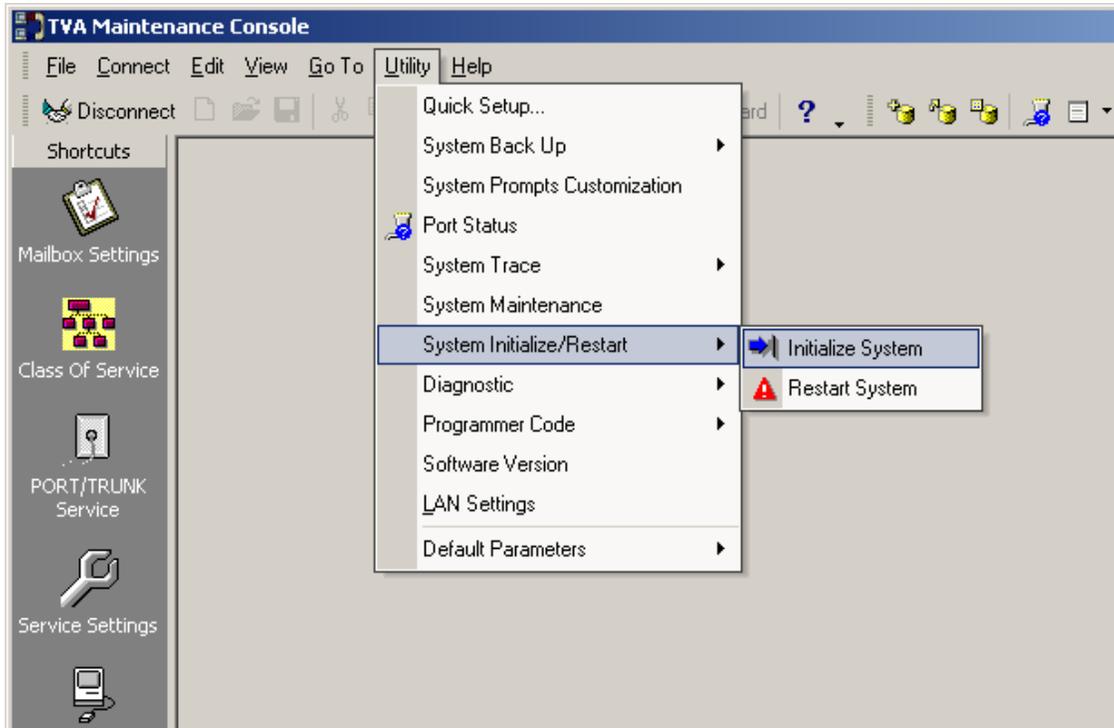

7.1 Initializing the VPS

Initializing the VPS erases recorded messages and resets all settings to their default values. (System prompts, including customized prompts, are preserved.)

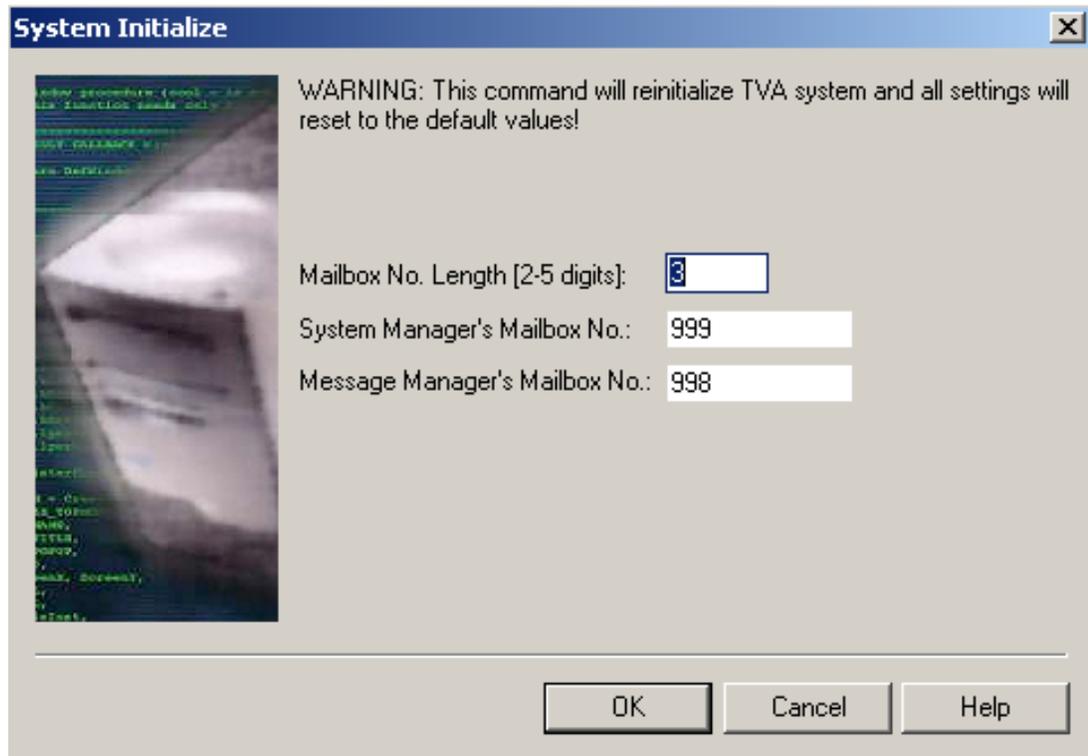

There are 2 methods to initialize the VPS: through KX-TVA Maintenance Console, and using the Mode Switch.

Initializing the VPS with KX-TVA Maintenance Console

1. Click "Utility → System Initialize/Restart → Initialize System".

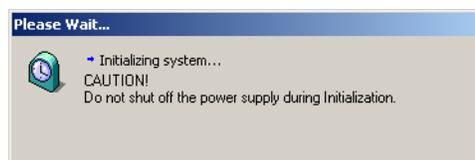

2. Specify "Mailbox No. Length (2–5 digits)", "System Manager's Mailbox No." and "Message Manager's Mailbox No.".

3. Click "OK".

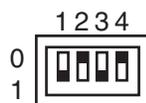

4. Click "OK" to close all lines and continue with initialization.

5. Click "OK" when system initialization is complete.

Initializing the VPS with the Mode Switch

1. Disconnect the port cables from the VPS.
2. Turn the power switch off at the VPS.
3. Set the Mode Switch to position 5 (see 2.3 Names and Locations).

4. Turn the power switch back on at the VPS.
5. Connect the port cables.
6. Confirm that the Run Indicator blinks 5 times.
7. Turn the power switch off at the VPS.

7.1 Initializing the VPS

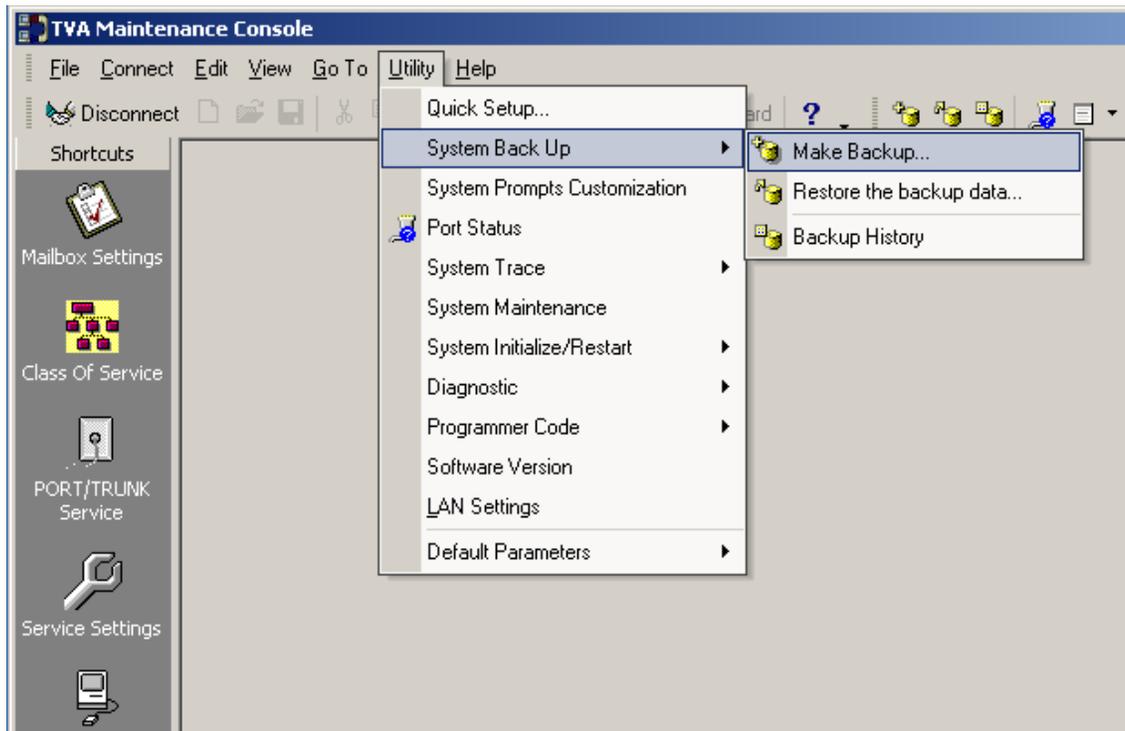

8. Set the Mode Switch to position 0.
9. Turn the power switch back on at the VPS.

Note

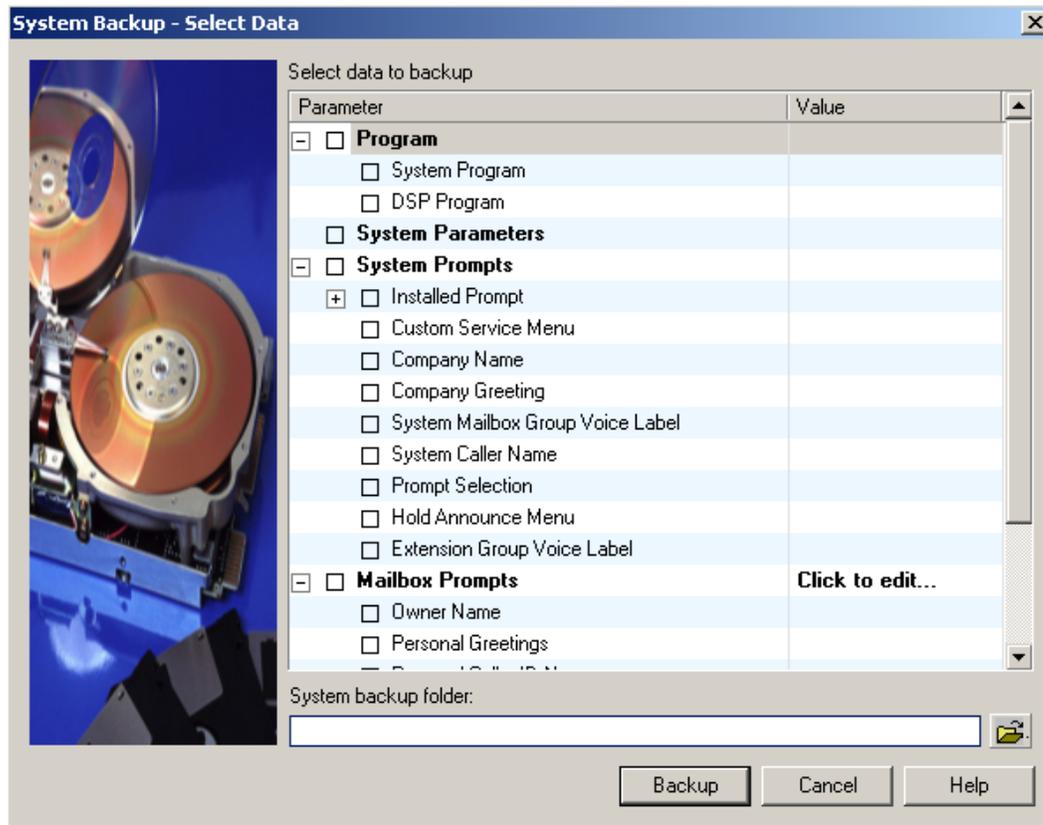

- The execution time for the initialization may differ each time it is performed because of system capacity and system programs. Generally, initialization will take about 10 min to accomplish.

7.2 Backing Up the System

Click [Utility→System Back up→Make Backup...].

Select the data to be backed up, then enter the file path for the system backup. Then click **"Backup"**.

The system will prepare the data to be backed up, and the backup will begin about 30 seconds later. The time needed to backup the data will vary depending on the connection method, communication speed, and the amount of data that is being backed up.

To restore the system from a backup, refer to [Restoration of Backup Data] in 1.8.2 Utility—System Back Up in the Programming Manual.

Note

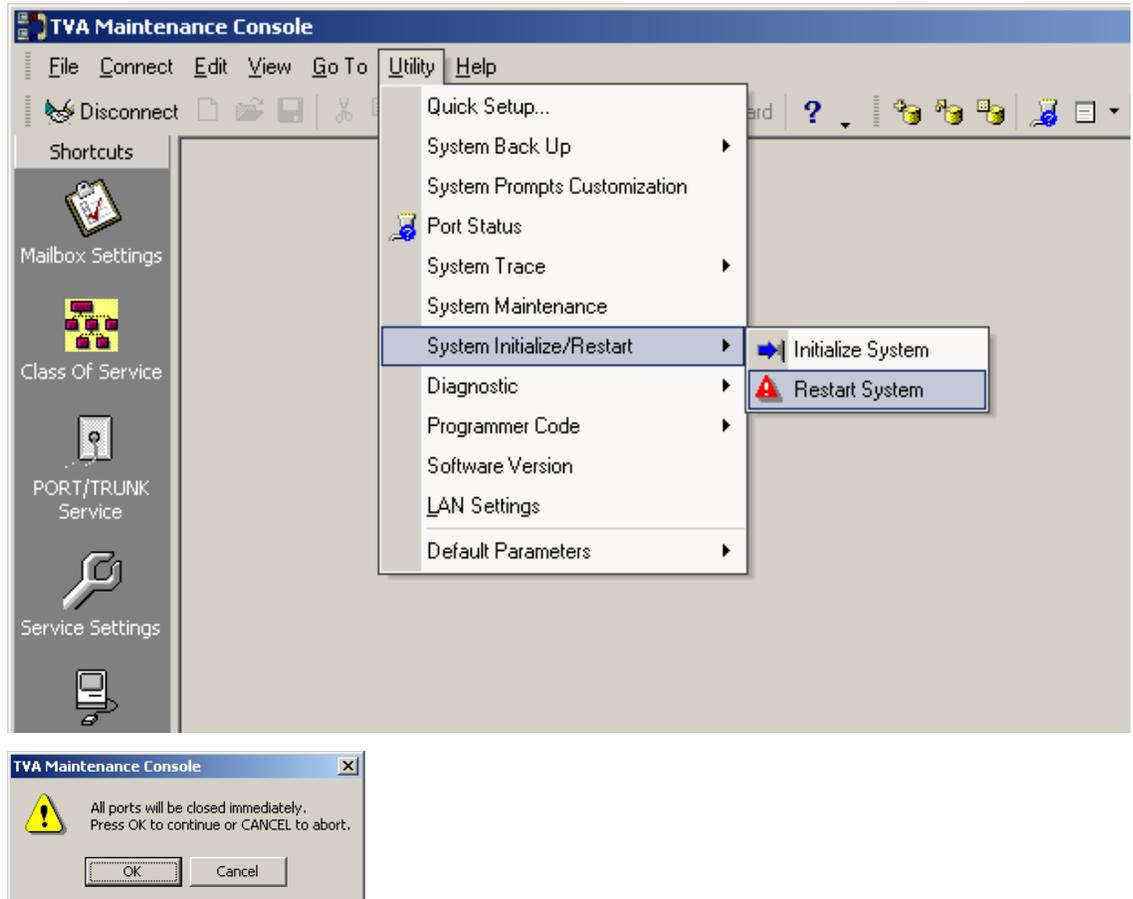

- Deleted messages are not backed up.
- Backing up all data (including system prompts) is recommended.
- System prompt files are very large and can take several hours to backup.
- Store backup files in a safe place.

7.3 Restarting the VPS

If the VPS is not functioning properly, restarting the VPS may resolve the issue. There are 3 methods for restarting the VPS, explained below.

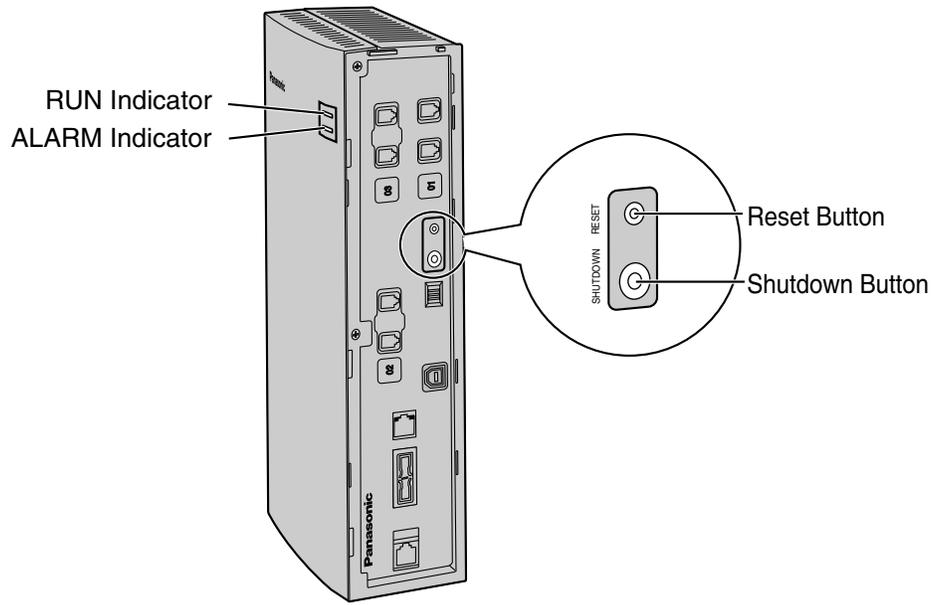

Operation

1. If the VPS does not operate properly:
 - a. First, try to click **"Utility → System Initialize/Restart → Restart System"**.

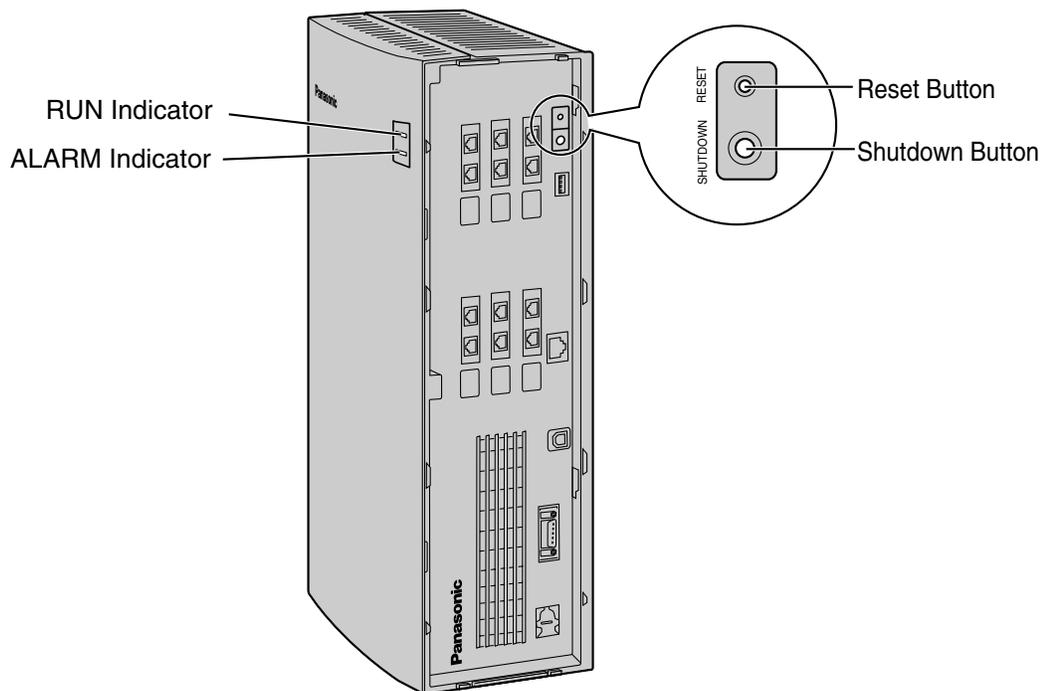

- b. Select **"OK"** to close all lines and restart the VPS.
 - c. Press **"OK"** and wait for the VPS to restart.
2. If the VPS still does not operate properly:
 - a. Press the Shutdown button. The RUN Indicator will begin flashing.
 - b. Wait for the RUN Indicator to turn off and for the ALARM Indicator to light.
 - c. Press the Reset button.
 - Pressing the Reset button before the Alarm Indicator lights may cause the VPS to take an exceptionally long time (up to 10 minutes) to start up again.

7.3 Restarting the VPS

KX-TVA50

KX-TVA200

3. If the VPS still does not work:
 - a. Press the **Reset button** only.

Alternate Extension Group

The extensions assigned to an Alternate Extension Group receive transferred calls via the sequence specified as the group's "Alternate Extension Transfer Sequence".

APT Integration

Digital integration between the VPS and certain Panasonic PBXs. Requires upgraded software in the PBX. When the VPS and PBX use APT Integration, voices are sent using analog technology, and data is sent digitally. Depending on the model and/or the software version of the connected PBX, you may not be able to utilize certain features available only with APT Integration. For more information, consult your dealer.

Auto Configuration

Available with APT/DPT Integration only. Simplifies initial system setup by reading information from the PBX and automatically creating mailboxes in the VPS to correspond to the extensions connected to the PBX. Auto Configuration can be initiated with the appropriate Mode Switch setting or by System Administration (Quick Setup).

Auto Forwarding

Allows unplayed messages to be copied or moved to another mailbox.

Auto Receipt

Allows a subscriber or the System Manager to receive a message to confirm the reception of sent messages to other subscribers.

Automated Attendant

The Automated Attendant feature of the VPS requests the caller to enter an extension number and then the VPS dials the number. If there is no answer or the line is busy, the caller is given certain options, including the option to leave a message in a mailbox. This is the advantage of calling an extension indirectly through the Automated Attendant rather than calling it directly.

Automatic Log-in

Available with APT/DPT Integration only. Allows subscribers to access their mailboxes directly without entering their mailbox numbers. Subscribers can access their mailboxes directly from their extensions or from outside phones by dialing a preprogrammed telephone number (either a DID number or a telephone number that reaches the PBX via a preprogrammed trunk [CO line]) or by calling the VPS from a preprogrammed telephone number (Caller ID number).

Autoplay New Message

The VPS plays new messages automatically when a subscriber, the System Manager, or the Message Manager logs in to his or her mailbox.

Bookmark

Enables a subscriber, the System Manager, or the Message Manager to set a specific point (Bookmark) in a message and easily resume playback later from that point.

Call Blocking

Allows subscribers to have their calls handled by the Incomplete Call Handling Service without ringing at their extensions.

Call Screening

Allows subscribers to screen calls. The VPS prompts the caller with the message "Record your name at the tone", and records the caller's name. The caller is put on hold while the VPS calls the subscriber and plays back the caller's name. The subscriber can then decide whether to take the call or not.

Called Party ID

(Sometimes referred to as Follow-On ID) Allows the PBX to dial extra digits to bring the caller directly to a specified mailbox, rather than to the General Delivery Mailbox.

Caller ID Callback

Available with APT/DPT Integration only. Enables a subscriber to use the Caller ID number information included with a message to call back the message sender without dialing the caller's telephone number.

Caller ID Call Routing

Available with APT/DPT Integration only. The VPS automatically sends calls from preprogrammed Caller ID numbers to a specified extension, mailbox (including Mailbox Group) or Custom Service.

Caller Name Announcement (System/Personal)

Available with APT/DPT Integration only. The VPS announces prerecorded Caller ID caller names when:

(1) subscribers listen to messages received from preprogrammed telephone numbers left in their mailboxes.

(2) the VPS transfers calls from preprogrammed telephone numbers to subscribers (Caller ID Screening).

(3) the VPS pages subscribers by intercom (Intercom Paging).

Caller names can be recorded and played for all subscribers (system) or can be recorded by individual subscribers and played for their own calls only (personal). If the same Caller ID number is programmed for both System and Personal Caller Name Announcements, the VPS will use the caller name recorded by the subscriber.

Company Greeting

A maximum of 32 Company Greetings can be recorded to greet callers. One (or System Greeting or none) can be selected for each Day, Night, Lunch, Break, and Holiday service based on a port and trunk (CO line).

Company Name

This is played by the VPS to the intended receiver of an External Delivery Message when he or she is unable to enter correctly the password (if a password is required to listen to the message). This helps him or her to realize where the call came from and contact the message sender if necessary.

Covering Extension

Allows subscribers to set another extension as the destination for their calls. Callers can be directed to the covering extension either by the Incomplete Call Handling feature, or by pressing [0] while listening to a subscriber's personal greeting message or while leaving a message.

Custom Service Builder

Allows the System Administrator to create Custom Services visually, using KX-TVA Maintenance Console. Each Custom Service and its functions can be edited and arranged using a familiar drag-and-drop interface.

Custom Service

Allows callers to perform specific functions by pressing dial buttons on their telephones while listening to voice guidance (Custom Service Menus). Custom Services allow callers to connect themselves to an extension, mailbox, Mailbox Group, operator, fax machine, etc., without the assistance of an operator. The System Administrator can create a maximum of 100 Custom Services.

Default Mailbox Template

Is used as a template when the System Administrator creates consecutive mailboxes. It enables the System Administrator to apply basic settings (Mailbox Parameters, Message Waiting Notification, External Message Delivery, Auto Forwarding) to multiple mailboxes simultaneously.

Default Setting

A parameter defined for the VPS at the factory which can be changed through system programming by the System Administrator or the System Manager.

Delayed Ringing

There are 2 kinds of delayed ringing applications.

- (1) The VPS is used as the no-answer destination for the Intercept Routing feature of your PBX.
- (2) DIL 1:N (trunk [CO line] to several extensions) terminates on telephones and VPS ports. To give the telephone users a chance to answer calls, the VPS lines should be programmed for delayed ringing. Otherwise, the VPS will answer the calls immediately.

Delete Message Confirmation

The VPS requests confirmation from the subscriber before erasing a message left in his or her mailbox.

Delivery Time

The time specified by the subscriber for the VPS to deliver a prerecorded message. Subscribers can specify the delivery time when leaving messages for other subscribers or when sending a message via External Message Delivery.

DID Call Routing

Available with DPT Integration only. The VPS automatically sends calls from preprogrammed DID numbers to a specified extension, mailbox (including Mailbox Group) or Custom Service.

DPT Integration

Digital integration between the VPS and certain Panasonic PBXs. Requires upgraded software in the PBX. When the VPS and PBX use DPT Integration, voices and data are sent digitally. Depending on the model and/or the software version of the connected PBX, you may not be able to utilize certain features available only with DPT Integration. For more information, consult your dealer.

DTMF

Dual Tone Multi Frequency. Commonly referred to as touchtone.

E-mail Integration

Allows subscribers and the Message Manager to receive notification by e-mail when they receive new messages. Subscribers can also have the voice message attached to the e-mail notification if the System Administrator has enabled this feature for their mailboxes.

External Delivery Message

A message recorded by a subscriber and then delivered to outside parties and/or extensions. The VPS dials the outside telephone number or extension number and plays the message for the recipient. The message can be delivered immediately or at a specified time.

External Message Delivery List

A preprogrammed list of outside parties and extensions that can be used to deliver an External Delivery Message to several recipients in one operation. Each subscriber can create 2 External Message Delivery Lists. Each list can have 8 destinations.

External Message Delivery Retry

Determines how many times the VPS will attempt to deliver an External Delivery Message when the called line (recipient) is busy or does not answer.

Fast Forward

Allows a subscriber to fast forward through a message in 4 second intervals.

Follow-On ID

(see "Called Party ID")

General Delivery Mailbox

A special mailbox that is maintained by the Message Manager. If a caller does not have a DTMF-compatible telephone, the caller cannot dial numbers in order to connect himself or herself to an extension or mailbox. Callers who do not dial any numbers can be directed to the General Delivery Mailbox.

Periodically (daily is best), the Message Manager should transfer messages in the General Delivery Mailbox to the appropriate subscriber mailboxes.

Hash Sign

The [#] key on the telephone keypad. Also known as the "pound sign".

Immediate Reply

Allows the message recipient to reply to a message without specifying the extension number or the mailbox number of the sender.

Inband Integration

When the VPS and PBX use Inband Integration, voices are sent using analogue technology, and data is sent using analogue DTMF tones. The PBX informs the VPS of the status of extensions by sending DTMF tones and Call Progress tones to the VPS. Many features, such as Intercom Paging, Live Call Screening (LCS), etc., are not available with Inband Integration.

Incomplete Call Handling Service

Calls are considered incomplete when is the called extension does not answer, is busy, or has set Call Blocking.

Incomplete Call Handling can handle calls in 7 different ways. Each subscriber can specify the options available to callers when their calls are incomplete.

- (1) leave a message in the subscriber's mailbox
- (2) transfer to the subscriber's Covering Extension
- (3) Intercom Paging (notify the subscriber by paging the subscriber)
- (4) Beeper Access (notify the subscriber by paging the subscribers beeper)
- (5) transfer to Custom Service
- (6) transfer to operator
- (7) return the caller to the top menu, allowing the caller to call another extension

Intercept Routing—No Answer

A PBX feature that transfers an unanswered call to another extension or to the VPS.

Intercom Paging

Available with APT/DPT Integration only. If a subscriber has set Intercom Paging, the VPS will page the subscriber and announce that he or she is receiving a call. The VPS can announce prerecorded caller names using the Caller Name Announcement feature, or prompt the caller to record his or her name and announce the recorded name. Pages can be heard through PT speakers or through external speakers connected to the PBX.

Interview Service

Allows the VPS to "interview" a caller by playing a series of prerecorded questions and recording the caller's responses. Subscribers are able to record questions directly into their interview mailboxes. After a caller records his or her answers, the Message Waiting Lamp turns on at the subscriber's telephone. This feature is very useful for claims departments, order desks, job applications, etc.

Keypad

The dial keys ([0]–[9], [*], [#]) on a telephone.

LCD

Liquid crystal display

Live Call Screening (LCS)

Available with APT/DPT Integration only. Allows the subscriber to use his or her PT to monitor incoming calls as messages are being recorded. The subscriber has the option of answering calls while monitoring or allowing the message to be recorded without interruption.

Logical Extension (All Calls Transfer to Mailbox)

An extension that always receives calls directly into its mailbox. This feature is used by subscribers who are often unavailable or who do not have a telephone.

Mailbox Capacity (recording time)

The total length of time for all messages that can be recorded in a subscriber's mailbox. The System Administrator or System Manager can set each subscriber's maximum mailbox capacity. Each subscriber's mailbox capacity is determined by COS.

Mailbox Capacity Warning

Allows the VPS to alert subscribers when recording time for their mailboxes are running low. The warning announcement will be heard at the beginning of Subscriber's Service.

Mailbox Group

A preprogrammed list of subscriber mailboxes that can be used (by any subscriber) to deliver a message to several recipients in one operation. Up to 20 Mailbox Groups can be created.

Mailbox Number

Normally the same number as the corresponding subscriber's extension number.

Message Envelope Setting

Specifies when message envelopes (message date and time, name of the person who recorded or transferred the message, telephone number of the caller) are announced. Envelopes can be played back before or after messages automatically, or only when the subscriber presses [2] [3] during or after message playback.

Message Manager

Mailbox 998. The person who takes care of message-related maintenance, such as General Delivery Mailbox maintenance, and recording and deleting messages (System Prompts, Company Greetings, Custom Service Menus, System Caller Names, etc.)

Message Recovery

Allows a subscriber to change the status of a message from "deleted" to "old", preventing the message from being permanently deleted.

Message Retention Time

Determines the number of days before a message is automatically deleted.

New Message Retention Time: Determines when new (unplayed) messages are deleted.

Saved Message Retention Time: Determines when old (played) messages are deleted.

Message Retrieval Order

When a subscriber has several messages in his or her mailbox, determines whether messages are played back from newest to oldest (Last In First Out [LIFO] or from oldest to newest First In First Out [FIFO]).

Message Transfer

Allows a subscriber to reroute a message to another mailbox and add his or her comments to the message if necessary. Receipt messages and messages originally marked as "private" cannot be transferred.

Message Waiting Lamp

The lamp on a PT that lights when there are messages in the extension user's mailbox.

Message Waiting Notification

Notifies subscribers and the Message Manager when they have received messages, by lighting the Message Waiting Lamp on their PTs, by calling a preprogrammed telephone number, or by paging a beeper.

Multilingual Selection Menu

Allows callers to select the language they would like to hear for voice guidance (system prompts). 3 languages can be selected for the Multilingual Selection Menu of the KX-TVA50; 5 languages for the KX-TVA200.

Non-Subscriber

A caller to the VPS who does not own a mailbox.

Notification Method

(see "Message Waiting Notification")

On Hold Announcement Menu

Allows callers in a queue to listen to the prerecorded announcement or music while they are on hold.

One-touch Two-way Transfer (One-touch TWT)

Available with KX-TDA series and KX-TAW series PBXs using DPT Integration only. Allows a subscriber to record his or her telephone conversations into another subscriber's mailbox with a one-touch operation.

Operator

3 different extensions can be assigned as operators for each time mode. Callers can be directed to an operator when they dial [0], when they have rotary or pulse telephones (and thus cannot dial while listening to VPS prompts), or when certain VPS features are programmed to direct callers to an operator.

Owner's Name

Each mailbox has an owner's name (subscriber name), and there are 2 ways that these names are stored in the VPS.

First, subscribers can record their own names; the VPS can announce this recorded name during transfers, Intercom Paging, and when callers use the Dialing by Name feature.

Second, the System Administrator can assign a text name for each subscriber. This allows callers to dial subscribers extension's by name (Dialing by Name) rather than by number. For example, a caller can dial "S-M-I-T" (Smith) rather than Smith's mailbox number, which can be hard to remember.

Password

A combination of numbers that protects a subscriber's mailbox from unauthorized access. If forgotten, the System Administrator or the System Manager can clear it so that the subscriber can select a new password.

Personal Custom Service

Similar to a Custom Service, allows callers to perform specific functions by pressing dial buttons on their telephones while listening to the subscriber's Personal Greeting Message. A subscriber's Personal Custom Service can allow callers to connect themselves to another extension, mailbox, outside telephone (such as the subscriber's mobile phone), etc., without the assistance of an operator. Each subscriber can create his or her own Personal Custom Service.

Personal Greetings

Subscribers can record 3 greeting messages that greet callers who are directed to their mailboxes. The Personal Greeting heard by callers depends on the status of the subscriber or VPS.

No Answer Greeting: Heard by callers when the subscriber does not answer.

Busy Signal Greeting: Heard by callers when the subscriber is busy.

After Hours Greeting: Heard by callers when the VPS is in night mode.

Personal Greeting for Caller ID

Available with APT/DPT Integration only. A subscriber can record a maximum of 4 Personal Greeting messages that are played for callers whose telephone numbers (Caller ID numbers) have been assigned to a Personal Greeting for Caller ID. A maximum of 8 Caller ID numbers can be assigned to each greeting.

Personal Group Distribution List

A preprogrammed list of subscriber mailboxes that can be used (by the subscriber who created the list) to deliver a message to several recipients in one operation. Each subscriber can create 4 Personal Group Distribution Lists. Each list can have 40 members.

Personal Programming

Also known as Station Programming. PBX programming that is performed by an extension user to customize his or her extension's settings. In order to use certain VPS features, such as Live Call Screening (LCS), personal programming may be required.

PIN Call Routing

Allows preferred callers to be directed to a specific extension, mailbox, or Custom Service when they enter their assigned PIN.

Playback Volume/Speed Control

Allows subscribers to control playback volume and speed while listening to messages.

Port

The point of connection between the PBX and the VPS.

Pound Sign

The [#] key on the telephone keypad. Also known as the "hash sign".

Private Message

A message designated by the sender as private. Private messages cannot be forwarded by the recipient.

Remote Call Forwarding Set

Available with DPT Integration only. Allows subscribers and the Message Manager to program their extensions from a remote location to forward various types of calls (all calls, no answer, busy, etc.) to a desired extension, or to an outside telephone (Remote Call Forward to CO).

Remote Call Forward to CO

Available with DPT Integration only. Allows subscribers and the Message Manager to program their extensions from a remote location to forward their calls to an outside telephone, if authorized.

Rewind

Allows a subscriber to replay the last 4 seconds of a message.

Rotary Telephone

A telephone that is not capable of emitting DTMF (touchtone) signals. Callers using rotary telephones will be automatically forwarded to an operator or the General Delivery Mailbox because they cannot dial numbers as directed by the VPS prompts.

Service Group

A group of settings which determine how incoming calls are handled by the VPS. One of 8 call service groups is assigned to each VPS port or PBX trunk (CO line).

Service Mode

Determines if incoming calls are handled by the VPS according to settings made for day mode, night mode, lunch mode, or break mode. The current mode can be changed automatically (either by the VPS or by the time mode settings of the PBX) or can be changed manually by the System Administrator and System Manager. Each Service Group is assigned a Service Mode.

Subscriber

A person who has an assigned mailbox.

Subscriber Tutorial

Guides subscribers through the mailbox configuration process the first time they access their mailboxes. The subscriber's password, owner's name, and No Answer Greeting can be configured using the Subscriber Tutorial.

System Administration

Includes system programming, diagnosis, system prompt administration, etc. They are performed by the System Administrator, using a PC running the KX-TVA Maintenance Console software. System Administration can be performed locally (on-site) by connecting to the VPS via USB or LAN, or remotely (off-site) by connecting to the VPS via the optional modem card.

System Administrator

Is the person responsible for programming the most essential VPS settings. Unlike the Message Manager and the System Manager, who use a telephone to perform their duties, the System Administrator uses a PC running the KX-TVA Maintenance Console software to program the VPS. The System Administrator's handbook is the Programming Manual. Only one programming session is possible at a time.

System External Message Delivery Duration Time

Specifies the maximum telephone connection time allowed for External Message Delivery. Prevents excessive telephone charges.

System Manager

Mailbox 999. The person who can perform a subset of the items that can be programmed by the System Administrator. The System Manager, using a telephone connected to the VPS, can create/delete mailboxes, clear subscriber passwords when they are forgotten, set Class of Service parameters, set the System Clock, etc.

System Prompt

Recorded voice guidance messages that help subscribers and callers use VPS features. Over 1000 prompts are prerecorded in the VPS.

The System Administrator and Message Manager can rerecord prompts as necessary.

The System Administrator and the Message Manager can turn system prompts on and off as needed. Each system prompt has a unique number.

System Report

The System Administrator or the System Manager can generate various System Reports to monitor the status of the VPS.

System Security

By default, the System Manager and Message Manager cannot access the VPS from their telephones until the System Administrator sets their passwords and allows them to access the VPS via their telephones. The System Manager and Message Manager must always enter their passwords in order to access the VPS.

The System Administrator can also choose to set a default password for subscriber's mailboxes. If this setting is enabled, a default password is automatically assigned when mailboxes are created.

Temporary Personal Greeting

A special greeting that, if recorded by a subscriber, is heard by callers instead of the subscribers other Personal Greetings. Often used to inform callers of a temporary absence. A common example might be, "This is (name). I'm out of the office this week...".

Time Synchronization

Available with DPT Integration only. When the date and time is set for the PBX or when DPT Integration is established, date and time data is sent from the PBX to the VPS.

Timed Reminder Setting

Available with DPT Integration only. Allows a subscriber to set a Timed Reminder by following system prompts provided by the VPS. Timed Reminder is a PBX feature that is similar to an alarm clock; the telephone will ring at the set time (once or daily) as set by the subscriber or Message Manager.

Toll Saver

Allows a subscriber to check his or her mailbox for new messages by calling the VPS from a preprogrammed Caller ID number, by dialing a preprogrammed DID number, or by dialing a telephone number that connects the call to a preprogrammed trunk (CO line) of the PBX. Toll Saver is a cost-saving feature that lets the subscriber know if he or she has new messages by the number of rings heard before the VPS answers the outside call from the subscriber. If the VPS does not answer the call within a preprogrammed time period, the subscriber can disconnect the call and thus avoid telephone charges.

Two-way Record

Available with APT/DPT Integration only. Allows a subscriber to record his or her telephone conversations into his or her mailbox.

Two-way Transfer

Available with APT/DPT Integration only. Allows a subscriber to record his or her telephone conversations into another subscriber's mailbox. The subscriber must specify the desired extension number when using this feature.

Unlimited Message Length

Allows a subscriber to record telephone conversations of an unlimited length of time when using Two-way Record and Two-way Transfer. The maximum recording time for other messages will be automatically set to 60 minutes.

Urgent Message

A message designated by the sender as urgent. Urgent messages are played back before other messages when the recipient listen to his or her messages.

VM Menu

Available with KX-TDA series PBXs using DPT Integration only. Displays VPS text prompts on the display of a compatible PT, allowing the subscriber to operate the VPS by following text prompts and pressing soft buttons and the Navigator Key. Voice prompts are not used.

Voice Mail

A general term used for messages recorded by the VPS and stored in subscriber mailboxes.

VPS

A Voice Processing System, such as the Panasonic KX-TVA50, and KX-TVA200.
